EDISON'S EXAM
CONTAINS MANY
HARD QUESTIONS

Quiz Taken by 40 Youths Demands a Knowledge of Ethics and Judgment in Addition to the Technical.

EAST ORANGE, N. J., July 31 (UPI)—Particular youths hopeful of winning the title of Thomas A. Edison's brightest boy of 1930, sat down today to puzzle over an examination that carried them from Experiments, electric to Mathematics, from Chemistry to History, and from Aristotle's hypothesis to the equivalent of a master's degree.

Test of Ethics.

This examination was something more than a test of knowledge of mathematics and chemistry for instance; it was a test of common sense and ethics. For example, after the boys had solved their equations and a half hour spent on ethics questions, they found themselves faced with this problem of human behavior:

"You are the head of an expedition which has come to grief in the desert. There is enough food and water left to enable three people to get back to civilization, but a half hour's march will suffice to kill the last man. Your companions are: a brilliant scientist, 60 years old; two half breed Indians, 55 and 32; the scientist's wife, interested mainly in society manners and interests; a little girl, 10 years old; and a boy, 12, who is determined to marry your best friend, a young man of your own age, who has shown great promise in the field of science."

"Which would you choose to live and which to die? Give your answer today," advised from here Dr. George E. Johnson, president of the Edison Foundation.

The test of ethics was something more than a test of knowledge of mathematics and chemistry.

It involved the question of

right and wrong, good and

bad, right and wrong,

ROBINS, MACKMEN BOTH WIN GAMES AND ADD TO LEAD

Washington Loses to Philadelphia While Brooklyn Is Winning Twin Bill, Yanks Batter Boston's Red Sox.

By United Press

His again for the second straight game, the Chicago Cubs faced the possibility of losing ground in the National League pennant race.

While the Cubs vacated yesterday because of an open date in their schedule, the Brooklyn Robins grabbed two games from the Phillies, 3-6, 9-3, and increased their lead over the Cubs to 2½ games.

The Philadelphia Athletics enjoyed a 7-game lead in the American League race today as they finished 2nd, 2-1, 2-0, 2-0, 2-0, 2-0, 2-0, 2-0, 2-0, 2-0, and increased their lead over the Cubs to 2½ games.

The New York Yankees annexed a 1½-game lead over the Boston Red Sox, 8-2, and 10-3, and threatened to overtake the slipping Senators in second place. The Yankees are now 2½ games behind the Senators.

The St. Louis Browns moved within two games of the lead, while Chicago White Sox by winning a doubleheader from Detroit's team, 6-4, 6-4.

Cleveland wasted its hits as Detroit beat the Indians on three hits, 6-5. Cleveland moved 14th.

The New York 5-4, Eddie Murphy single starting with four hits in four times at bat.

Pittsburgh moved into a game of two, a place by beating Cleveland, 5-4, 6-5, and the St. Louis Cardinals, 6-5, for the second straight day.

Los Angeles: 10-10, 10.

Batteries: Dugdale, Edwards, Mc-

Quill and Hunt; Jennings, Verker-

and Hanan.

OUR BOARDING HOUSE

By Ahern

TUFFY GRIFFITHS DEFEATS HEENEY

NEW YORK, July 31 (UPI)—Tuffy Griffiths of Sioux City, Ia., scored a technical knockout over the belligerent Newfounlander, Tom Heeney, impossible to score the bell for the final round of a scheduled 10-round bout at the Queensboro Stadium last night.

Griffiths, who sealed 16 against Heeney's 20½, was credited with winning every round after the 10th. Heeney was the first round winner, but Griffiths' greatest knockdown half way through the rounds "within the first minute" of the round. The second and third rounds were even.

Heeney was saved from a knock-out when the bell ended the ninth round. Griffiths had scored solid blows to the head and body, use of the arms.

Heeney was down, came back up in a bunch, ready to attack the coup de grace when the bell sounded.

A MIDSUMMER GIFT.

ENCOURAGING indeed are the announcements coming from the Interstate Commerce Commission regarding the reduction of freight rates on grain destined for shipment in all directions out of Southern Idaho.

Every battle that is won in the cause of Southern Idaho farmers puts this section just that much nearer the fore in the matter of markets, and eventually benefits the producer.

Hearings, appeals, decisions, and contests necessary before results can be accomplished in commerce commission decisions lowering rates, are slow, tedious, costly and oftentimes exasperating, but it is to the everlasting credit of the local chamber of commerce and its officers, the state public utilities commission, the Idaho Rate association and other similar bodies that the fight has been pushed to a successful conclusion, on one commodity at least.

Taken along with the other blessings of this section, including good crop prospects, plenty of water, at least normal prices and satisfactory weather, it will only require a few more rate decisions such as this one to relieve southern Idaho of much of the stigma it has heretofore borne in the matter of freight rates and distance from markets.

And when considering the decision, no one should minimize the great importance of lower rates to the coast. If the coast is not already the big outlet for the products of this section, it shortly will be, and right now the proximity of the coast market is manifestly the reason for the fact that market prices of farm commodities, including dairy products, here, compare very favorably with those in the midwest where the consuming centers are.

Right when encouragement for agriculture is sorely needed, the interstate commerce commission's decision comes as a welcome mid-summer gift, so to speak.

Expressing sincere thanks, and trusting that the results shall be all that is hoped, Southern Idaho may well say to the commission that its efforts are appreciated and a debt of gratitude is acknowledged.

THE FEARLESS CRITIC OF PRESIDENTS

THIRTY-FIVE years ago Emporia, Kansas, was a

small town with a population of 26,000 and the Emporia Gazette had a circulation of 485. Today Emporia is still a small town, with a population of 27,000, but the Gazette has increased its circulation to 7,000, and only 80 Emporia homes get along without it. Mr. White believes that the local success of the Gazette is a business success and that advertising is the best nourishment for freedom of speech. However, the editorials which have been reprinted all over the English-speaking world have undoubtedly played a tremendous part in the Gazette's successful rise. With Mr. White's uncanny dexterity in words goes a gift for the interpretation of public sentiment. It is his privilege to speak the mind of no one class of citizens. He is not the mouthpiece of unthinking anarchy nor of satisfied conservatism; he voices the aspirations of the minds of all.

The story of William Allen White's career, told in World's Work, mentions an incident with the famous Mark Hanna. Hanna insisted that Mr. White call on President-elect McKinley. He said, "The President of the United States needs to know you." Finally White agreed. "But," said he, "do this, in your letter of introduction tell him that I am not looking for a job." Whereupon Hanna wrote the following letter: "February 12, '97. Honorable William McKinley: My dear Governor: This will introduce Mr. William Allen White, who wrote 'What's the Matter With Kansas?' I have a great admiration for this young man and bespeak for him your kind consideration. He wants no office. Sincerely yours, Mark A. Hanna."

And for thirty years Mr. White says, that letter has been his "kicker's license."

It was his prophetic discernment which earned national prestige for the editor when he was still in his twenty's. His editorial "What's the Matter With Kansas?" sensed in advance the farmers' realization that failure to diversify crops had more to do with their bank accounts than the ratio of gold and silver; that drought and grasshoppers knew no political party, and that they could not be regulated by fanatics in government.

His unique insight apprises Emporians and presidents with equal penetration. Kansas appreciates him, for William Allen White is their prophet, honored at home as well as abroad.

If there is any prospective voter who does not expect to be in his home precinct to vote at the primary election next Tuesday, all he needs to do in order to exercise his franchise is to go to offices of the county auditor and vote by the "absentee" ballot method. This privilege is available to all those properly registered and should be taken advantage of if absence is anticipated.

The Tinymites

Story by HAL COCHRAN — Pictures by KING

(READ THE STORY, THEN COLOR THE PICTURE)

"Hurry! The Critic is here to meet such very friendly people," said Cappy, the Critic. "He was very nice, I think. He said he wanted to know which is good and true? And he leaped up and down and said, 'I decide all that I eat is wrong.' You bet," I replied. "When you are hot and thirsty it's the last. And you all can drink a real refreshing drink."

The man, he held fast quiet. "I'm going to pour you a lemonade. Don't let it on your clothes." Each tiny drink he could and then pronounced it very good. Said Scatty, "You sure know just how to make lemonade."

The man replied, "I'm glad you think it makes a coolin' taste drink. Now who will have another? There's plenty still to flow. I like to treat, wee laud like you. Then Clancy said, "I guess we're through. We thank you, Mr. White, for your nice drink. Much more will help us to go on."

And so they sauntered down the street as Cappy said, "I like

(The Tinymites shift a strange watercolor place in the next story.)

Declo Matron Is Rodeo Attracts Springfield Guest Rogerson People

ROGERSON, July 31 (Special)—Mrs. Robert E. Fisher attended a birthday party Monday afternoon for Mrs. James Brown of Springfield.

Irene and Orville Ward, spent Sunday day in Jerome with friends.

Mrs. Mary A. Blister, who has spent the past two months in California, returned to her home in Jerome Wednesday.

Mrs. Louis Fisher was the week end guest of Alice Ruth Brownson at her residence.

Mr. and Mrs. John W. Hill and family spent Sunday in Elko with relatives. They were accompanied home by Mrs. Lucy Cooper and son, Jim, who will remain at the Elko home for some time.

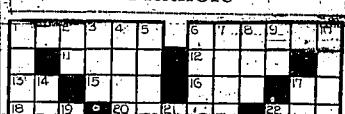

Mr. and Mrs. Hyrum S. Lewis and daughter, Bernice, spent a week end Sunday morning for a week's vacation trip through the Yellow Stone park.

Lloyd Fisher returned Monday from the boy scout camp in the retracted Sunday for Salt Lake.

Mr. and Mrs. T. Curtis and daughter, Nellie, and son, Curtis, have returned from Salt Lake City where they visited their son and brother, Burdell Curtis, who is attending business college.

Shakespeare's Family—William Shakespeare was the third child in the family. His two daughters, who died in infancy, were the first and second children. The others were Gilbert, Joan, Anne, Richard and Edmund.

RUSSIA PRODUCES CHEAP GOODS BY CONVICTS' LABOR

**Northview Farms
Net Barley Drops**

NORTHVIEW, July 31 (Special)—The community threshing-holiday has been reported to be the best. The Northview Community club will serve ice cream and cake at the band concert in the park next Thursday evening.

Mr. and Mrs. C. H. Hart and children, Mr. and Mrs. Maurice Charles, Carpenter, and children, who are staying over for a short time, are the latest arrivals from the community state.

In addition to wood pulp, lumber and building materials are produced at Leflar prison in Moscow, "photographed plates at workshops in Slobodkin prison, a north Idaho town, tobacco in the United States due to building of Jim's Canning house in the U.S.A., Canning house, and lumber and paper products, leather, leather goods, cans, from various other prisons."

"It was officially but really estimated today that 10,000 convicts are productivity employed by the state, and produce standard goods at a total cost of \$1,400,000 per ruble (about \$7,000,000).

Briek production by Soviet convicts comprises 85 per cent of the total of the Soviet brick output.

The United Press correspondent during repeated visits to Soviet prisons and convict colonies as recently as 1929, found hygienic conditions in the worst possible condition.

Convict work is to be short and sometimes repulsive. Many prisons were situated in old and damp cloisters or harbored food.

Food was poor and dirty clothes and linen abhorrent.

On the other hand, education and medical treatment usually well supplied. The work which was performed, however, provided eight-hour day for convict labor.

ARMOUR WINS TITLE

ANGASTHOL, Ont., July 30 (UPI)—Tommy Armour of Detroit won the Canadian open golf championship, scoring 269 for the day's play, to lead Lee Ledgett of the Royal Canadian, 265, and total 133 in the two-round play-off.

Nation's Infancy

In 1773 the estimated population of the American colonies was 2,000,000.

The population of the principal colonies—Massachusetts, 332,000; Pennsylvania, 300,000; New York, 100,000; North Carolina, 450,000;

South Carolina, 250,000; and Virginia,

450,000.

"Man Has Own Master"

"Is it possible for men to be such animals upon whom no men bring upon themselves and suffer willingly?"—Bishop Taylor.

Revived Adago

If he counts and runs away, I have to count him back. But if he stays, I'll put himself in court instead.—Exchanges.

Hated

Very bitter army lawyer who had taken under the sun because he shall let unto the man that shall be after me.—Ecclipses.

Sing Sing

"American," says a magazine, "is nearly everything nowdays by electricity." Some even like it.

THE BRIDES-CHARTREUSE proposed
employing instruments never used before in an eclipse observation with the purpose of determining the exact duration of the position and motion of the earth and moon with respect to the sun.

Four stations for the project, the Mount Wilson, Naval and Brackett Observatory, were selected on the eastern side of the Sierra Nevada mountains and Campionton on the western side.

By reason of the scientific advances made in the perfection of some devices, it is possible to record on a single film the picture of the moon's shadow as the earth's surface is passed through the atmosphere—a remarkable instance of the cooperation in scientific investigation between interests which are widely separated.

Following a long illness, Dr. Donaldson, Mrs. Lester, and their daughter, Katherine, have returned to their home here after spending the past several weeks in Hollister, Calif., with Mrs. Caldwell's parents, Mr. and Mrs. J. C. Shewell, where Dr. Caldwell has been convalescing.

Eclipse Recorded on Sound Film by Scientists in Soaring Plane

Sound Picture Apparatus and Radio Aid Observers in Novel Expedition

Arrangements completed

for the first time, have

it possible for scientists to obtain

data on the solar eclipse by

means of a sound picture

camera and a radio receiver.

In this undertaking the Army Air Corps cooperated by assigning Captain A. W. Stevens, U. S. Army, and Captain F. L. Bracken, U. S. Army, to the project.

Bracken's task was to record

the shadow of the sun on

film while flying in a high altitude

and the radio receiver to receive

radio signals sent from the

ground to indicate the progress

of the shadow as it moved across the sky.

The plane arrived and the

expedition started its work.

On the second night Capt. Stevens and Lt. Corkill slept in the place in their

airplane, while Capt. Bracken slept in the path of totality.

The shadow appeared much larger than was

expected, according to the experts.

New methods used.

The general outline of the shadow

was obtained by means of a

camera and a projector, and

the picture was enlarged on a

screen.

The plane arrived and the

expedition started its work.

On the second night Capt. Stevens and Lt. Corkill slept in the place in their

airplane, while Capt. Bracken slept in the path of totality.

وَالْمُؤْمِنُونَ الْمُؤْمِنَاتُ وَالْمُؤْمِنُونَ الْمُؤْمِنَاتُ

the first time in the history of the world, the people of the United States have been called upon to decide whether they will submit to the law of force, or the law of the Constitution. We have now an opportunity unprecedented in the history of the world, to decide whether we will submit to the law of force, or the law of the Constitution.

desirable floor space in proportion to the power developed. In 1911 the power requirements had increased to such an extent that it was necessary to change the power house or to change to more efficient machinery. Between the years 1911 and 1913, therefore, the slow moving direct current

rent, which were replaced by alternating current turbo-generators, increasing the capacity of the plant from 17,800 kilowatts to several times that. Since then other increases have been made until at the time of the fire the total capacity was 24,500 kilowatts. By increasing the voltage to 11,000 volts

From 440 the voltage of the original alternating current equipment, it was reduced to 34,500, about twenty times its original rating.
