Vigilante vs. Mob Law

A Series of Historical Sketches and Happenings in the Early Days of Idaho

By C. S. WALGAMOTT

(Copyright, 1927, by Citizen Publishing Company)

We often hear the vigilantes of the early west compared with the mob law of our southern states and sometimes placed in the same category.

This in the writer's opinion, is wholly wrong. Mob law is to be found in communities where organized law and law enforcement do exist. There are overt acts so shocking to society that the people become greatly excited and under the influence and spur of this excitement pass the law out of its regular course and that speedy punishment to the accused, without trial and often regretted by the entire communities.

The early vigilantes were the outgrowth of a demand for justice against organized crime when and where law enforcement did not exist.

Miners of the different mining camps held the balance of power and so it was in the early days of the affairs that the power that was theirs was wrested from them. They were unorganized, but realized that some form of government was necessary, and in the larger camps they elected sheriffs who were known as the miners' sheriffs. One of these notably Henry Plummer the miners' sheriff used his office in the interest of a well organized body of criminals that has few parallels in the annals of crime. These men when not employed in murder and robbery, followed the pursuit of gambling where luxuriantly the gambler was and the sucker lost. It was impossible for men who had accumulated wealth by hard labor from their claims to get out of the country with their lives, much less their hard earned riches. The rough, unsettled country through which they had to travel, made the exploits of the organized murderers more easy and they invariably committed the robberies with a view that "dead men tell no tales" and murder was committed.

To an outsider of these camps, it seemed that the criminal element was far in the majority. Men that were outspoken in favor of law and order mysteriously disappeared and others were warned to hold their tongues. Conditions reached a point where it was necessary to make a desperate attempt to clear the country of crime, or deliver it bodily to the murderer element. It was dangerous to speak of this even to the miner on the adjoining claim. An organization would have to be perfect if at all, in complete secrecy or the organizers would be discovered. At first a few careful, but fearless men talked together with their most intimate friends. The movement was carried along with great secrecy and care until it became evident that a majority of the miners, even in these rough camps, were in favor of law and order.

The existence of the order of vigilantes—best known to the criminal gang who definitely made threats against its members until the gang leaders were arrested, tried before a miners' court, convicted and hanged with dispatch. Then the outlaws realized that the power that had created them was the power that would destroy them and a reign of terror seized them. They found in attempting to escape that the rough unsettled country that had to be traveled and had been to their advantage in their murderous exploits, was now against them. They were captured and either executed on the spot or taken back for miners' trial as the case might merit.

This so cleared the atmosphere that crime became unknown; men could travel unmolested, miners rarely lacked their cabin doors, and on visiting their sluice boxes in the morning, found them unmolested. So perfectly had the work been done that the miners left their gold dust or report on the outside of the cabin door.

The effect of this crusade against crime was felt for years and no criminal organization existed until the building of the Oregon Short Line railroad in the early '80's. It is known that the building of this railroad through Idaho was the fastest railroad building of its time. Every available man was employed at what was considered good wages. The Denver and Rio Grande railroad had just completed heavy construction work that released a great number of men who flocked to the O. S. L. railroad camps. Among these were many "street gamblers" and men of bad repute.

The nature of the desert country that the O. S. L. passed through, made the construction camps a law unto themselves. The lawless element took the leading part. Railroad workers that visited the saloons were rather well received of their money by being drugged or sand-bagged.

This condition reached its highest point at the crossing of Snake River at American Falls. On account of the spanning of Snake River at the point and the heavy rock work west caused a considerable camp to spring into existence.

Oullina and Stephens, the main contractors, who furnished supplies for the subcontractors had an immense stock of goods at this point. Through the lack of buildings, a great portion of the goods of this great stock were placed on racks on the grounds and covered with tarpaulins.

A man by the name of Jesse Pallard was employed as chief clerk. The country was so rough in its manner that it was a great deal necessary that an armed man carry a sawed-off shotgun, swung from his shoulder. The criminal element was headed by two self-acknowledged ruffians by the name of Tex and Johnson. So bold had they become that an organization captained by Jesse Pallard was effected, to wait on these two men and demand that they leave the saloons where they conducted their unlawful pursuits, and immediately leave the country. Word of the organization reached Tex and John, who were at first defiant. They later retreated to the opposite side of the river where several shots were exchanged; but a month or two later of Jesse Pallard who followed them, they were captured, brought back, and hanged from the railroad bridge.

This so rid the construction camp of crime that no overt act was committed that justified organized resistance until Cortland Corigan, the largest of the subcontractors established a camp some distance east of Shoshone (I think about where Detrich now is). They forbade the operation of saloons nearer than two miles of camp.

A man by the name of Charlie Terry opened up a saloon at the request of the contractor and endeavored to conduct his place in a manner that would meet the requirements of the contractors. His saloon was visited by many graders and no trouble arose until a party of three—two men and a boy some 18 years of age, made a trip to the Terry saloon. It developed that on the return trip to the camp one of the men, who was greatly under the influence of liquor, displayed a considerable roll of bills. He was enticed some distance from the trail where he was clubbed into insensibility and shot to death.

Realizing the possibility of detection the man and the boy endeavored to make their escape. It happened that the lifeless body of the murdered man was soon discovered and great excitement ran through the camp. The murderer's trucks were found going north and in a few hours they were captured near the Little Wood river. They were brought back to camp and tried by a committee of the graders. The boy testified that the man had committed the robbery and murder while he, the boy had pleaded for the man's life. The man corroborated the statement, the boy was reprimanded and was told to leave the country. The man was convicted and condemned to be hanged. They could not hang him on the sagebrush and as necessarily is the mother of invention they elected two sawyers to saw a dead man together by the front wheels to keep them from separating. The condemned man's feet and hands were lashed, a noose thrown over the neck with the rope through the loop of the wagon tongue. He was hoisted, without face covering, high in the air and allowed to hang for several days as a warning to the men of the camp and masses-by-

I was told by a young man at that time and who is now a resident of Shoshone, that when he was hauling grain from American Falls to Shoshone he passed this camp (and he emphasizes "passed") three days after the hanging and the man's neck to him seemed three feet long. After hanging for several days Corigan and Cortigan ordered the body cut down and buried.

This so clarified the air that during the continued construction of the Oregon Short Line, while it was sometimes pretty tough, no overt act was committed that justified speedy punishment.

CASTLEFORD

Mr. and Mrs. E. W. Gaff and two sons, Mr. and Mrs. Charles Berlat of Duhl and Mr. and Mrs. G. S. Atkinson and son of Sunnyside were Sunday visitors at the J. J. Bick home.

Mr. and Mrs. Glenn Conrad and children of Sunnyside were Sunday dinner guests at the H. L. Conrad home.

J. A. Brown is driving a new Dodge sedan.

Joe Pinkston of Brunel came Sunday for a visit at the home of his uncle Fred Pinkston and family.

Mr. and Mrs. Henry Hughlett and sons were Sunday dinner guests of Mr. and Mrs. Fred Pinkston.

The junior class entertained with a party Friday night. About thirty guests were present and all enjoyed the evening. Dainty refreshments were served.

Mr. and Mrs. Julius Shlake and two daughters were Sunday dinner guests of Miss Margaret Thomas.

Mrs. Maud Mann of Nampa, Mrs. Willard Charlton of Duhl, and C. R. Ulrich of La. were dinner guests of Mr. and Mrs. T. S. Flynn Thursday.

Mrs. Charles Coker and daughter Ellen of Duhl agent Saturday with Mrs. Guy Futran.

Mr. and Mrs. E. E. Ulrich entertained at Sunday dinner. Covers were laid for Mr. and Mrs. Claud Ulrich and children of Twin Falls, Mrs. Willard Charlton of Duhl, Mrs. Ben Mann of

Nampa, Mrs. W. A. Blue and the sons C. W. Ulrich, Mrs. and Mrs. G. M. Putnam, Elaine Kin- yon, Gladys Gopher and Everett Blue.

The M. E. Ladies' aid met Thursday at the home of Mrs. R. L. Conrad with Mrs. J. C. Conrad and Mrs. F. R. Carr assisting. An interesting program for the "Columbia" was prepared by Mrs. W. J. Burke. Twenty-six members and five guests were present.

The next meeting will be November 8 at the home of Mrs. S. A. Gillett with Mrs. John French, Mrs. Linda and Mrs. Worley assisting.

Now Try the Amazing New ABC SPINNER IN YOUR OWN HOME FREE

Spins Away Suds... Spins Away Water

This washer dries clothes for the line while it washes another tubful sweet and clean without hand rubbing. The powerful agitator spins out the dirt. The dryer-chamber spins out the water—faster and better than any wringer.

A Patented Revolving Turret Drainboard returns the suds to the washer tub and rinses water to rinse tubes placed at any angle with the machine.—No lifting of water. No clutter of bells, exposed mechanism, levers, etc., to worry about. The simplest washer-dryer ever devised.

Both the washer-tub and the dryer-chamber are blue porcelain enameled.

Take Advantage of the Special Introductory Terms

After you have tried the ABC SPINNER in your home and found what a great labor saving appliance it is, you can keep it there, to do your washings every week for a first payment of only \$5.00. Then while you are enjoying your SPINNER you can complete the balance in easy monthly sums. Phone at once for a FREE Trial.

(Continued from Page One)

ing section, and I'm sure you can make money growing my beans. The 'lady' here is a headliner that the Idaho Great Northern, but requires a little different handling than the white bean, especially in the matter of irrigation. Thirty bushels per acre was the best yield received at Jerome this year, for this bean, but those who raised the beans stated that the beans should have had more water in the early 'young stage' and not so much water, but at the right time later in the plant's growth.

Mr. Waugh stated that he can handle up to a 100 car loads of these beans, and would furnish the seed at not to exceed a price of \$5.00 per 100. He will have a representative with contract here at his place, except that farmers who so desire, will have the opportunity of trying out this crop next year.

Celebrating

(Continued from Page One)

ers concerned in marketing and distribution.

"For the long year period ending December, 1926, the average annual production of apples in Idaho was 997,000 bushels, resulting in an estimated average annual return to the growers of about \$224,000. This proves the attractiveness of the apple industry to the state of Idaho. Cash apples reach markets in not less than 12 states.

"Idaho is the only western apple producing state that will show an increase in production of apples this year over last year, and it is expected that shipments from Idaho will amount to more than 1,000 cars or a production of 2,000,000 bushels this season.

"Idaho apples are generally distributed to not less than 22 states at the markets, and the range of the apple distributor to the State of Idaho, particularly this year, when financial returns to growers will be exceptionally high, due to a variety shortage of production in other apple-producing localities."

Despite these figures for the

The Livestock Situation

LAS ANGELES, October 31.—It is doubtful if there ever has been a more optimistic feeling in the cattle situation generally than prevails at this time. An actual shortage of cattle is claimed by some in the trade—others are of the opinion that as a matter of fact, there are not enough cattle in the country to provide herds, although there may be a shortage of the situation to warrant extremely high prices or talk of anything that might be termed "artificial" shortages.

During the war period, when both for patriotic reasons and under influence of high prices, an emergency was created, the great following as a result of a "darker" market ruined many good cattlemen and some "bad" cattlemen. Since that time and up to the past year or so, depletion has in progress. Until 1926, most cattlemen were content to accept the situation of financial pressure and because of lack of sufficient feed. Personally, it seems to me that in 1926 and early 1927, the movement of cattle to market had much the appearance of a clean-up, wide-scale culling of the herd.

The results, at least, is that at the present time, western ranges are pretty well cleaned up of old, worn-out stock and are generally being restocked with younger stock. The ranges are emerging barely enough cattle to produce enough young stock to move herd prices. Since that time and up to the present, the ranges are reseeded and better feed conditions are developing, aided by good rains.

Right at this time, the cattle situation as far as the western prairie is concerned, is almost ideal. There is a ready market for every head of satisfactory and profitable stock. The market is not a replacement need, perhaps not at high prices, but certainly of satisfactory and profitable prices.

September receipts at the public livestock markets in the U. S. as shown by the department of agriculture, are 12 per cent fewer than for the year average. Likewise, the slaughter of cattle in these points is 16 per cent smaller than a year ago and 10 per cent smaller than for the 5-year average. Stocker and feeder movements to the country show a decline of 22 per cent from a year ago and a 27 per cent decrease from the latter average.

"No Hentons" signs for sale at The Citizen office.

Whippet Averages 44.4 Miles an Hour

Flotina a Whippet Collie—Bradford's "Speed" Bradford added another achievement to the long list of Whippet accomplishments when he ended a 2,242-mile journey in 58 hours, 22 minutes at an average of 44.4 miles an hour. This was an all-around and speed record, a made a few days ago at Oshon, Neb., under the official observation of newspapermen.

At the conclusion of the test which was staged to demonstrate the reliability and stamina of the Whippet, Bradford and his Whippet were given a great ovation by the crowd which was present at the finish. "Spot," responding to the applause, declared that the entire performance of the Whippet which such other conditions was a revelation to him. He said that many cars, riding even in a hazy fog, would not have stood up under the gruelling test which the Whippet was forced to undergo.

The entire Whippet test lasted a total of 108 hours, consisting of nine 12-mile laps, one each 12 hours. Twenty stops of five minutes each were made on each lap. As the Whippet passed on mile after mile, hours after clear and dry after day, a tremendous interest was aroused over the entire route covered by the record-setting Whippet.

Every type of road was included on the Whippet's route. Many hills with steep grades and sharp curves were also encountered, but Bradford reported that in every instance the Whippet responded to every demand of the wheel, throttle and brake.

Although no official check was kept of the gasoline consumption, Bradford estimated that the Whippet averaged 25 to 25 miles to the gallon which included the idling time of the motor while the Whippet made the scheduled stops. The itinerary included Council Bluffs, Plattsmouth, Moberly, Ashland, Greenwood, Seward, York, Decora, Columbus, Waver, West Point, Saylor, West Bluff, Fremont, Wabash and Meade.

THE IDAHO CITIZEN

SEMI-WEEKLY Per Year, \$2.50
A semi-weekly newspaper published on Tuesday and Friday of each week at Twin Falls, Idaho.

THE MILK DRINKING HABIT

Columns have been written in the agricultural press and magazines regarding the achievement of Colonel Charles A. Lindbergh. The most important statement, in so far as dairying was concerned, was the first statement made upon landing in France when he asked for a pint of milk and a bath.

At this time of the year a demand is made in many sections of the country upon our milk supply. It is the training season when athletes are preparing to compete for new honors. Practically every college or preparatory school of any size has a training table where their track teams and football teams and others train for coming events.

A prominent New York business man makes the following statement: "It has become a recognized fact that the modern business man can get through a much larger volume of business and be in better shape, both physically and mentally, at the end of each day, on a light luncheon. In most cases the meal is composed of a sandwich and a glass of milk."

The greatest experiment which has been conducted with the human race is one where forty-one boys in London were placed upon a diet of milk and water for a period of six weeks.

Sixty-one boys were given a basic diet. This basic diet satisfied the appetite of the growing boys and apparently was all that was needed. During the first year these boys increased in height 1.81 inches and gained an average of 25.5 pounds.

Another group of boys, forty-one in number and as nearly like the group of boys fed the basic diet as possible, were fed a pint of milk a day in addition to the basic diet. As a result their gain in height was 2.63 inches and their gain in weight 6.98 pounds.

The basic diet varied from day to day, and consisted of selections from the following: Potatoes, bread, beef, pork, herring, kipper, sausage, dumplings, cabbage, beets, cheese, peas, turnip, "hush," lettuce, molasses, sugar, "choco" (containing a total of two to four ounces of milk daily), margarine, jam, raisin suit pudding, rice, puddings and cake.

It is to be noted that no preference was shown in selecting the groups; they were as evenly balanced as was possible to make them. The entire experiment was planned and conducted under the supervision of the Medical Research Council.

The differences in gains were the result of the food and nothing else, inasmuch as the housing conditions were the same for all the children, and the same factors prevailed in all cases, except with respect to food.

FIVE DAYS AT LEAST

The American Federation of Labor favors a five-day week, giving the worker two days out of seven. Russia's Government, exercising all powers, establishes a seven-hour work-day, four days from the soft slavery of old Russia. Those who start the five-day week, want men to have one day in which to spend what they earn in five days. Spending is as important to the country as earning, they say.

The value to workers of a seven hour day, or five day week, depends upon what they do with the extra day or hours of freedom. If they read and think more, they will go ahead. If not, they will stay in the same place, but in any case, the greater leisure will improve their health. That will make a better next generation, inclined to thought.

Robert A. Millikan, brilliant scientist of California Institute of Technology, tells students that science "will free human slaves," meaning, presumably, that science will free men from hard labor. Pray that it may not happen too soon. Free men today from the necessity that drives them, and 99 in 100 would become worthless. If you doubt it, contemplate those that inherit wealth, in so-called society.

LOTS OF WHEAT

Surprising as most states of the country with an average yield per acre of 21 bushels, Idaho is harvesting approximately 24,000,000 bushels of wheat, the largest crop ever grown in the Gem state.

United States department of agriculture reports from the Division of crop estimates that these figures which are based on a large harvested area.

Utah is the only state which shows an acre yield equal to Idaho's but the sinter state has a total crop of less than 3,000,000 bushels.

Montana, one of the heavy wheat producers, has a total crop estimated at about 65,000,000 bushels with an average yield per acre of 20 bushels. Washington, another heavy producer, reports an average yield of 19.5 bushels to the acre.

Idaho's wheat crop for 1926 was less than 25,000,000 bushels and the five year average for the state is 24,000,000 bushels.

Non-irrigated wheat land in Idaho produces from 16 to 46 bushels to the acre depending on the season, while the irrigated tracts average between 50 to 70 bushels to the acre with outstanding productions this year reaching more than 90 bushels to an acre of land.

William H. Clune, railroad engineer dies at Los Angeles, leaving a fortune of \$20,000,000. He made the money in moving pictures.

Golfs Into College

Johnnie Goodman, 16, Omaha, Neb., orphan, who won the Trans-Mississippi golf championship this year, is to have a college education. Omaha clubbers have pledged to see him through and next year to enter him in national play they think he is another Bobby Jones.

Head Origin in "Netting" Crowbaiting, as well as killing, is believed to have developed from the ancient art of netting. The word "netting" has appeared in the English language in the year 1183.

California Is Vivid Romance

Seldom does the motion picture give us upon the screen a historical romance as vivid and as colorful as "California." Tim Mc-Coy's latest historical Western picture, titled by Metro-Goldwyn-Mayer and now playing at the Orpheum Tuesday, was not only the picture is based on a story from the pen of Peter B. Kyne, which was written especially as a starring vehicle for McCoy. They hope that it is the reason that the star so admirably fits the role of Captain Gillespie, U. S. M. C.

Kyne chose as his historical era the period when California was being conquered by the Americans, the time when the proud old Spanish families were losing their grasp on what is now one of the most famous states in the Union.

It was an era of romance and battle, an era suitable for a picture of love and action, against a background of fact. The story is dramatic and makes the blood run free.

The star's previous military experience helps and him to the role of the "fire-drill" messenger and the hardest fighting marine in the service of his country.

Borahy Sebastian is seen in the role of the Spanish aristocrat who, despite her wishes, falls in love with one of the invaders, falls in love with one of the invaders, is seen who upsets her own father. She loses him and shoots him.

The cast in "California" includes: Captain Gillespie, U. S. M. C., by Tim McCoy; Borahy Sebastian, by E. E. Lawrence; Casper Nygard and J. H. Tremblay, Jr. were county seat visitors Wednesday.

A Halloween party will be given by Hollister Grange Friday evening, November 4, for members and their families.

Mrs. Harley Butler of Twin Falls was in Hollister Friday.

Mrs. J. L. Wray submitted to an operation for gallstones, Thursday, at the county hospital.

When you have something to sell, put it in a small ad in the "Netting" department and watch the results.

National President

Here's another screen triumph for Jack Mulhall. He comes to the Orpheum theatre for one day only, Wednesday, in his latest First National picture, "The Poor Suit." Never has he appeared to better advantage.

Elliot Nugent, one of the authors of the piece, played Jack in the stage show. He was considered excellent in it. They say that there is nothing better than excellent. However, we beg to differ, for Jack Mulhall is better than excellent in his characterization in this picture.

Jack is ably supported by Charles Murray, Jane Winton, and Arthur and a cast of unusually fine players. Jess Smith exercised keen judgment when he selected the cast for "The Poor Suit."

Portrays Romance of College Life

More than 15 per cent of the estimated total irrigated area of the world lies within the United States according to a tabulation made public by the Bureau of Reclamation, department of the interior, recently.

The total irrigated acreage for the world is given as 117,600,000 and that for the United States as 20,175,000.

The figures show that India is the country having the greatest area under irrigation, its total being 50,700,000 acres. The United States, with its total of 20,175,000 acres, ranks second, followed with 8,250,000 acres, ranks third, and Russia, with 8,000,000 rank fourth.

The Door—The Door Graduate: "Have you an opening for a college trained man?" Manager: "Yes, it's right behind you, and would you mind closing it as you go out?"

U. S. Is Second In Irrigation

Urges Pre-Winter Auto Check-up

Sick people do not work properly. Neither can "sick" automobiles. The only difference being that a person can sense an ill-feeling

No "Applesauce"

If Goodwyn Jones of Concord, N. H., who invited around in the primaries and is now in a race for mayor of that town on a platform of no "applesauce" politics—the practice of politician,

and go to a doctor, while the automobile doctor on an ill car will weather come and fergo a visible protest—then a repair job is needed. This is the observation of H. A. Armstrong, director of service of the Oakland Motor Car Company, who urges owners to have their cars given a preliminary inspection and adjustments necessary to insure maximum cold-weather performance.

The pre-winter automobile check-up is similar to the check-up given by a physician every autumn just for "inspection," said Mr. Armstrong. "The physician checks over the visitor's physical condition, gives his diet, possibly gives him a prophylactic of anti-cold serum, directs him to change to heavier clothing and in general 'services' him for the winter. It is a wise precautionary measure that undoubtedly prevents much winter illness.

The few essential attentions which are necessary before any automobile can maintain its best service under lower temperature conditions, require very little more time than the physician consumes in preparing the human in-

chine for the rigors of winter. But that hour or two will pay large dividends later in uninterrupted driving satisfaction. Many of the Oakland-Pontiac service stations have grouped these cold weather precautions under a flat rate which compares favorably with the fee which a competent physician charges for physical examination.

"Highly important among these details is a change to lighter lubricants in crank case, transmission and rear end. A lighter grade is necessary to give the moving parts the same protection that they received during warm weather with heavier lubricants.

"Gasoline tank, gasoline lines and carburetor should be cleaned, garage, we advise our owners to

The carburetor should be adjusted to give a slightly richer mixture, which is nothing more than placing the car on a cold weather diet. Spark plugs should be cleaned or replaced if they have been in service for more than 10,000 miles, they should be replaced. Distributor points should be cleaned and adjusted. Radiator hose connection should be tightened. If compression has been reduced by long service, it should be brought back to normal. Hard starting in winter often may be traced to low compression.

While many motorists now understand that a radiator hose connection they are able to practically all of these operations in their home and garage, we advise our owners to

place the car in an Oakland-Pontiac garage where trained service specialists are available. The flat rate plan is spreading steadily through the Oakland service organization. It is meeting with universal approval from motorists. They like the idea of buying their car "over the counter" at a known price just as they would any other commodity.

Last winter lot faller got car smashed up not to say nothing about broken nose, yanked up knee on account day got on rut on kent got up. We pay lot claim for dot kind disaster. Now before ya get on mizup, we suggest ya get yourself an Automobile insurance against damage. We will fix ya up.

The Convenient Way to Pay

Paying by check is the most convenient and businesslike way. If a remittance is sent through the mail, it is not necessary to buy a money order or to register a letter carrying currency or coin—simply enclose your check for the amount and drop the envelope in the mail box.

A Safe, Dividend-Paying Investment NOT a Speculation or Get-Rich-Quick Scheme Do Not Make the Mistake of Confusing Investing With Speculating

WHAT IS SPECULATING? Too many people think of speculating and gambling when INVESTING is mentioned. There is a vast difference between speculating and investing. Speculating consists of plunging in blindly and taking chances with your money—subjecting your hard earned savings to all kinds of hazards where you risk losing your money. WHAT IS INVESTING? The dictionary says investing means "to place money where it will be SAFE and EARN MORE MONEY." Hundreds of our Customers and other local people have placed their savings in our Preferred Stock. There it is SAFE and every three months each stockholder receives a check from the Company for money earned by his savings INVESTED in
