TWIN FALLS COOKING FAMED.

Mention Made in Eastern Papers of City's Electric Cooking.

The following article has been copied in "Electrical" papers in many parts of the country and in a number of electrical magazines and other publications.

"Electric cooking has become so much the fashion in Idaho that it might almost be called a fad were it not for the very substantial mode of expression it has taken, for it stops at nothing—less than regular electric kitchen ranges.

"The Great Shoshone and Twin Falls Water Power Company of Twin Falls, Idaho, has been originating electric ranges by the carload to supply the local demand."

"These Electrical Pages are widely read, particularly in the east, and this article cannot help but be a big boost for the Twin Falls country and for its up-to-date spirit and progressiveness."

The carload of electric ranges referred to in the article is the first shipment of the kind ever made in the country, and has caused quite a flurry in electrical circles.

MODERN DUSTING.

Electricity—Used for Dusting.

For removing dust from around buttons in tufted upholstery there is no other method so rapid and thorough.

Health and sanitary cleanliness demand that upholstery and bedding should have this kind of treatment at least once a week. There are always places where dust and germs lodge and places which the hand neglects to clean with a duster because of the inconvenience, but with the electric tools that are part of the electric vacuum cleaner, it becomes a simple and easy matter to clean thoroughly over the tops of doors, plate rails and the tops of picture frames.

"I really do not mind doing my own cleaning now," said a young housekeeper, "since I have an electric vacuum cleaner. I go over the house with it and there is no dust stirred up. All dirt and germs are drawn into a bag. I can clean curtains and pictures without removing them and no fabrics are injured. I would not part with my electric vacuum cleaner because it does away with 90 per cent of the dusting in the old way."

Popular Electricity Magazine.

ELECTRIC INCUBATORS.

Incubating by Electricity Proves Satisfactory.

Electricity, it has been discovered, is the best possible medium to use to heat an incubator for hatching eggs. In New Orleans this is being done on a very extensive scale. The regular city supply of the current is used, but the intensity is regulated by means of a thermostat. Thus any temperature desired can be obtained and held, something practically impossible with the oil lamps formerly used for the purpose. Very little care is required. All it amounts to is to let the seasonal reading of the thermostat and taking out the eggs once in every 24 hours, so that they may be aired.

NO-HEAT STOVES POPULAR.

Women Have Laid Aside Drudgery of Summer Cooking.

This summer will see many more families than last, provided with the household helps which make the various summer days really enjoyable by everyone.

Undoubtedly the greatest summer problem for the home worker is cooking; aside from the one time necessity for extra heat for this purpose its persistency is unfeeling. It is, therefore, only natural that women have given the first consideration to cool, easy cooking.

Many managers most nobly in the small table cooking appliances. If a woman is in possession of even one of these (one can sometimes be used for several different operations) by carefully planning her bill of fare she can have well balanced meals prepared almost entirely by table cooking. It is worth while to take time in the early part of the summer to figure out a real line-up on this.

But, on the whole, for large families and among the electric kitchen ranges has been the most satisfactory answer to the problem.

Every electric range has the advantage of providing no extra heat and of requiring the least possible attention.

The electric range idea is not new by any means and they have been developed in both size and price, to suit the needs of almost any family. A complete electric range comes for \$65.00—by Mrs. Mary Mortimer.

RAPID GROWTH OF A YOUNGSTER

Development of Electricity has Been Marvelous.

The birthday of a delightful alumnus who shall be ever young. The newest of the sciences, it is just beginning to celebrate the anniversaries of achievements which were begun twenty-five or thirty years ago. From insignificant beginnings dated from the time of Faraday, 1791-1869, it was not till the arrival of the incandescent lamp and the steam motor, and less than forty years old, that electricity was regarded as a bouncing baby of considerable size.

Its progress is nothing less than astounding. Its manifold possibilities now supremely effective in so many ways are just being revealed. Electricity, not only for lighting and power but for heating and cooking as well, is being offered by central stations all over the country. For cleanliness, efficiency and reliability, it has no competitor.

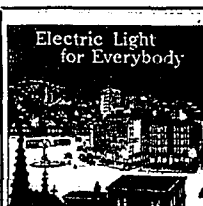

The first central station limited started operation in Wisconsin in 1885 and now imagine what enormously valuable service is being rendered all over the world through the practical application of this great natural agent. Electricity in the home has come to be a necessity in the work of the housewife. In thousands of cases, it is truly the solution of the servant problem, for a house that is equipped with electric service has nothing to fear from the hasty departure of a few years old, that electricity will practically banish every other form of light and fuel.

ELECTRIC IRONS SAVE TIME.

Saving Effected in Time and Money with Electric Irons.

The cost of operating electric irons is less than the cost of coal for the laundry stove when used only to heat ironers. It has been estimated that each worker with ordinary appliances loses one minute out of every ten in trying to keep them at the right temperature for use. Electric irons maintain their proper heat steadily.

"I am sorry to have to do this," said Johnny, as he spread jam on the cat's face, "but I can't help it, suspicion pointing his finger at me."

SAVING PAYS COOKING COST.

Slight Shrinkage of Meat Big Factor in Electric Cooking.

That a saving of one and one-half pounds of meat in a nine-pound leg of mutton may be effected by cooking in an electric oven compared with cooking the same joint by coal has been shown in the results of a number of recent careful and independent experiments.

These experiments show that there is a shrinkage of from twenty-five to thirty-five per cent in the weight of meat cooked by coal, whereas the same kind of food cooked to the same degree by the electric oven loses only ten or fifteen per cent of its original weight. Thus, it is conceivable that even if coal costs nothing it would be cheaper to use an electric oven, since the shrinkage due to electric cooking is so slight compared with that sustained when coal ovens are employed.

The results of experiments made by Mr. K. D. Matthews, an English Electric Heating Engineer, are as follows:

| Using a coal oven— | Loss of weight in lb. |
|--------------------|-----------------------|
| Ribs of beef | 31.0 |
| Leg of mutton | 31.7 |
| Shoulder of mutton | 25.7 |

Average loss

Using an electric oven—

Ribs of beef

Leg of mutton

Shoulder of mutton

Average loss

A family of four people ordinarily use about 44 pounds of meat each week.

If the cooking is to be by means of a coal oven, 62½ pounds of meat will have to be ordered from the butcher.

If an electric oven or broiler is used, only 31½ pounds will have to be ordered.

The use of the electric oven, therefore, results in a saving of 31½ pounds of meat.

At 30 cents a pound, the actual saving for a family of four people is about \$2.20 per month.

CHAFING DISH ARTISTS.

Historical Characters Entertained with Chafing Dishes.

The chafing dish is not a modern utensil, the application of the electric current to it is the modern feature. Fannie Merritt Farmer states that bronze chafing dishes of various designs and careful workmanship have been found among the ruins of Pompeii; that Louis XV often amused himself "by making quintessential steaks in silver pans," and that Madame Recamier, the beautiful and intellectual society leader whose salon was always filled with a brilliant stream of celebrities, entertained by the use of chafing dish.

An Englishman who writes most entertainingly on the subject of the chafing dish says: "Chafing dish cookery bears the same relation to middle class kitchen cookery that the beautiful art of fencing does to that of the broadsword. Both are useful but there is a world of subtle differentiation between the two. The average roué and tumble of the domestic sauceman contrasts to the same degree with the deft manipulation of the history of tiny pans."

Joseph of Savoy offered this advice out of his great wisdom: "Make the good things as plain as possible. God uses a special flavor to everything. Respect it. Do not destroy it by messing."

Given, a modern electric chafing dish, a few select comments, a fork and spoon, an energetic brain—and the possibilities of the utensil are limitless to the enterprising artist of the home. For instance:

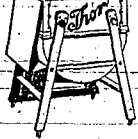

Lobster Patties.
The tail part of two boiled lobsters cut into small pieces and season well with salt and pepper and a little lemon juice, one pint of milk, one tablespoon of flour, one large tablespoon of butter, one large tablespoon of oil.

In the chafing dish boil a pint of

milk; dissolve the flour in cold milk and add to the hot milk; when thick stir in gradually the butter and allow it to become quite thick; stir the lobster into the sauce, and when it becomes hot, serve by filling the previously heated shells with the mixture.

Crabs a La Creole.

Four soft-shelled crabs, one ounce of butter, one small onion, and sweet Spanish pepper (not mixed), one-half pint strained tomato pulp, one egg of chicken broth, salt, celery salt. Put into the chafing dish the butter, onion and Spanish pepper, and cook five minutes, stirring well; add the tomato, chicken broth, crabs (each cut in two), salt and celery salt; stir well; simmer seven minutes. Popular Electricity Magazine.

Gentleman (engaging groom)—Are you married?
Groom—No, sir; I was thrown again a barbed wire fence and got my face scratched.

The first electric railroad in the Canal Zone at Panama is building. The new road is to run between Panama City and La Boca.

Still hesitating about ordering an

Electric Sign?

WHY?

MR. MERCHANT—

Did you ever notice the Power Company Electric Sign? No doubt you have.

Most everybody has noticed it. Has most everybody noticed your sign? Are there a great many people who can positively remember to have ever seen your sign at all? Why not make it attractive enough to be remembered—

attractive enough to draw trade—

attractive enough to indicate your desire to be progressive—

attractive enough to show people that you wish to attract them—that you want their attention and trade.

You are probably aware of the old "awful" which runs—

"He who whispers down a well About the goods he has to sell, Will not make as many dollars As the man who climbs a tree and hollers"

The Power Company's electric sign will be glad to submit details of just the kind of sign YOU need.

SPECIAL ORDINANCE NO. 16.
AN ORDINANCE DECLARING THE INTENTION OF THE CITY OF TWIN FALLS TO SPRINKLE CERTAIN STREETS AND AVENUES WITHIN THE CITY OF TWIN FALLS, THE EXTENSIVE THEREOF TO BE PAID BY ASSESSMENTS TO BE LEVIED AGAINST THE ABUTTING PROPERTY TO ESTABLISH FOR THAT PURPOSE LOCAL IMPROVEMENT DISTRICT NO. 16, AND FIXING THE TIME WHEN PROTESTS WILL BE RECEIVED AGAINST MAKING THE SAID PROPOSED IMPROVEMENT.

Be it Ordained by the Mayor and Council of the City of Twin Falls, Idaho:

Section 1. That the City of Twin Falls does hereby declare its intention to sprinkle with water the roadways of certain streets and avenues and parts of streets and avenues in said city hereinafter specified, and for that purpose to create and establish as part thereof, Local Improvement District No. 16, consisting of streets and avenues and parts of streets and avenues as follows:

Ninth Avenue East between Shoshone Street and Blue Lakes Boulevard.
Ninth Avenue North between Shoshone Street and Addison Avenue.
Fourth Street North between Fourth Avenue North and Fifth Avenue North.

That certain street and roadway commonly called Kimberly Road, from its intersection with Main Avenue thence east one-fourth mile to the city limits.
Section 2. The property to be included in said district and assessed as hereinafter provided shall include the lands and lots abutting on, contiguous to and adjacent to the streets and avenues or parts of streets and avenues hereinafter specified to be sprinkled, and the lands and lots which shall extend from the street or avenue on which it faces to the distance back from such street or avenue, if platted in blocks, to the center of the block; if platted in lots, only to the center of the lot; and if not platted, to the distance of one hundred twenty-five (125) feet.

Section 3. The cost of such sprinkling shall be assessed upon and against the lands and lots within said improvement district, abutting on, and contiguous, adjacent and tributary to the streets and avenues and parts of streets and avenues to be sprinkled, which said assessment shall be in accordance with and in proportion to the front footage of such lots and lands fronting thereon in said improvement district and in proportion to the benefits that will accrue to said property by the inclusion of said improvement district, abutting on, and contiguous, adjacent and tributary to the streets and avenues or parts of streets and avenues hereinafter specified to be sprinkled. All of the property within said Local Improvement District No. 16 shall be assessed as aforesaid for the cost of the sprinkling herein ordered except the expense of sprinkling in the space formed by the junction of two or more streets or where one main street terminates in or crosses another main street, and all necessary crosswalks or crossways shall not be included in said assessment but shall be paid by the City of Twin Falls.

Section 4. The general character of said improvement shall be the sprinkling with water of the roadways of the streets and avenues or parts of streets and avenues within said improvement district during the fiscal year 1913, when and in such manner as shall be required to lay and keep down the dust on such streets and avenues and parts of streets and avenues.

Section 5. The total cost of such sprinkling is estimated at the sum of \$200 divided as follows:
Cost of street frontage.....\$200.00
Intersections.....100.00
Section 6. The 1st day of May, A. D. 1913, at 8:00 o'clock P. M. is hereby designated as the time at which the Mayor and Council of said

LARGEST INSURANCE AGENCY

Twin Falls County

Hill & Taylor

City of Twin Falls will receive protests against making said proposed improvement, consisting of said sprinkling of said district, between the points hereinafter designated, and all persons affected by the same are hereby notified to file their objections in writing with the City Clerk of said City at or before the time of said meeting.

Passed by the Council of the City of Twin Falls, Idaho, this 21st day of April, 1913.

Attest:
STUART H. TAYLOR,
(Seal.) City Clerk. May 2-6

NOTICE FOR PUBLICATION.
Notice of Proof of Application of Water to Beneficial Use.
Notice is hereby given that at 10 a. m. on the 7th day of June, 1913, at Rock Creek, County of Twin Falls, State of Idaho, before John F. Hanson, U. S. Commissioner, proof will be submitted of the application to beneficial use of two (2) cubic feet per second of the waters of an unnamed stream, in accordance with the terms and conditions of Permit No. 7424, heretofore issued by the State Engineer of the State of Idaho.

1. The name and postoffice address of the person holding said permit are: Edward W. Tilly, Rock Creek, Twin Falls County, Idaho.
2. The use to which said water has been applied is irrigation and domestic use.
3. The amount applied to beneficial use is two (2) cubic feet per second.
4. The place where said water used is Ely NW 34, Sec. 30, NW 34, NW 4, T. 13 N., R. 13 E., S. 13 E., of Idaho, in the canal or ditch or other works by which said water is conducted to such place of use is Tilly ditch.
5. The date of the priority which said user is prepared to establish is May 23, 1911.
F. P. KING,
State Engineer.

SECOND ALIAS SUMMONS.

In the District Court of the Fourth Judicial District of the State of Idaho, in and for Twin Falls County, Atty. H. P. Taylor, Defendant, vs. H. P. Taylor, Plaintiff, and G. S. Aldrich, co-partners, as Swin & Aldrich, Plaintiffs, vs. H. P. Taylor, Defendant.

The State of Idaho sends Greeting to H. P. Taylor, defendant in said action.

You are hereby notified that said plaintiff has filed in the office of the clerk of said court, at Twin Falls, Idaho, in said State, their complaint against you for \$312.50, with interest thereon from March 31, 1912, at seven percent per annum; with plaintiff's costs and disbursements, upon contract between said plaintiff and you for their services in finding and securing a buyer for certain real property described in said complaint and for reasonable value of said services amounting to \$312.50.

And you are hereby summoned and required to appear and answer said complaint within twenty days after service of this summons, if served within the Fourth Judicial District of the State of Idaho, and within forty days if served elsewhere (exclusive of the day of service); and you are further notified that unless you so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of \$312.50 with interest thereon from March 31, 1912, at seven percent per annum, and for plaintiff's costs, being the sum demanded in said complaint.

Attest my hand and the seal of said court, this 21st day of April, 1913.

DEMAND THIS LABEL

On all of Your Printed Matter. It represents Good Workmanship, Good Wages, and Good Conditions.

There is good reason why the people of this city and county should shake off the feeling of lethargy which has been so manifest in the past year. There is every reason why the people of the Twin Falls country should get together and boost, and no good reason why they should not accomplish wonders. In the first place the railroad south is the best piece of news that has come to the tract in many years. It heralds unprecedented opportunity for every class of citizen to make good in the increased immigration and in the opening of demand markets for the already large production of this tract. It means activity for the real estate market, better prices for land and every kind of commodity. It means more tourists through this valley and thus more advertising when those tourists get back home. All things considered, the Twin Falls country has every reason to do the best boosting of its existence. There is a good strong boosting organization in this city in the Commercial club which should be backed by every citizen in giving this country the advertising that it needs today more than at any time in its history. The scenic wonders of this section if properly advertised before the San Francisco exposition would do more to route tourists via the line running south from here than any one thing that could be done. Once get the tourist into this section and the resources apparent will make each one a booster and do much good even after the expositions have passed into history.

THE PROGRESSIVE SENATE.

The political revolution of the last few years is nowhere so evident as in the new organization of the United States Senate. First, there is a safe Democratic majority of six, giving the party complete control of the Government for the first time in eight years since the Civil War. Then, the reorganization of the Senate has been accomplished in a way paralleling the overturn of "Cannonism" in the House, by the practical abolition of the minority rule in making up committees. The results of these two changes, especially when the personnel of new leaders is considered, are such as to baffle the Brooklyn Eagle (Ind. dem.) Washington correspondent and the editors of the Washington Times (Prog.) and Herald (Ind.) that the Senate is now actually a more progressive body than the House.

The breaking of the Illinois deadlock, by the election of Col. James Hamilton Lewis (Dem.) and L. V. Sherman (Rep.), enables the Senate to meet without a vacant chair. There are fifty-one Democratic Senators, forty-four Republicans, and one Progressive, Miles Polinder, of Washington. This will be the party to fight for the next two years, unless death invades the chamber. And before the end of this time, notes the New York Press (Prog.), the Constitutional amendment providing for the direct election of Senators will probably be in force, so that the next Senatorial elections may be by popular vote.

President Wilson's exceptional opportunity is noted by The Press in its Washington correspondence, for he has both Houses of Congress with him "an overwhelming majority," while "in only two years of President Cleveland's tenure in office did he have both branches of the national legislature in opposition to him. And for only two years did Taft have a Republican majority in both the House and Senate."

Though Mr. Polinder is the only out-and-out third party Senator, The Press names as Progressives who still retain "official connection with the Republican party," Senators La Follette, Cummins, Gronna, Brister, Clapp, Borah, Crawford, Kenyon, and Norris.

The new Senate organization is lauded, as Senator Kern puts it, to make that body "Democratic not only in name, but in practical results." It has thrown off, explains the Providence Journal (Ind.), "the customary control of a perpetual succession based on seniority of service," and the country is "disposed to applaud" the "change of political Republic" (Ind.), which proceeds to note some of the consequences of the revolution.

"Senator Bacon, of Georgia was defeated (by Mr. Clarke, of Arkansas) in the Democratic caucus for president pro tem, which he had set his heart upon. Senator Martin, of Virginia, lost the place of leader of the Senate, which went to Senator Kern."

The seniority precedent was upheld in the choice of Furness M. Simmons, of North Carolina, as chairman of the Finance Committee, which will handle tariff revision. But the chairman finds himself at the head of a committee majority made up of progressives pledged to radical tariff reduction. The Committee on Banking and Currency, nearly as important in view of approaching monetary reform, is headed by Senator Owen of Oklahoma.

The Republican insurgents, "a hopeless minority," had to see their party go to wreck, notes the Washington Times, but—

"The Democrats are more fortunate. Their aggressive liberal element comes to the top at the very beginning of Democratic ascendancy in the upper chamber. They are started right instead of wrong, so far as that body is concerned. Everything indicates that the Senate is becoming the more progressive, aggressive, radical chamber. Conversation must make its headquarters in the House."

REGULATION VS. COMPETITION

Public Utilities Commission Brings New Problem.

PUBLIC AND CORPORATION TO A DEGREE ARE PARTNERS.

Destructive Competition Should Not Be Allowed Where State Fixes Rates for Service.

Since the passage of the Public Utility Bill by the last session of the State legislature, a new and significant problem has been presented to our local communities. This question is that of Regulation versus Competition. Hereafter, the people will have no choice in the matter, and were in a way compelled to pay the tolls imposed by the local utility corporations, they will incur the expense of doing so without, or to invite competition of utility service. Since the Utility Bill became a law, however, the public has an option to choose whether it shall invite competition into a community, or whether it shall regulate the rates charged for utility service.

At first thought, who is likely to conclude that wherever opportunity affords competition should be invited. The feeling is engendered by the thought that a rate war will result, and that the consumer will reap the benefit. On the other hand, the fact must now be considered that the Utility Bill was passed for the express purpose of preventing the public from being charged the public for service given by the various utility companies. In other words, under this new law, the public is brought into partnership with the local utility companies. As the companies prosper by the growth of the business and public patronage, the consumers will receive proportionate benefit through compulsory reductions in rates. The law specifically provides that if a utility company shall be allowed to earn an income out of proportion to its investment or fair valuation.

All in all, the feeling is engendered by the thought that a rate war will result, and that the consumer will reap the benefit. On the other hand, the fact must now be considered that the Utility Bill was passed for the express purpose of preventing the public from being charged the public for service given by the various utility companies. In other words, under this new law, the public is brought into partnership with the local utility companies. As the companies prosper by the growth of the business and public patronage, the consumers will receive proportionate benefit through compulsory reductions in rates. The law specifically provides that if a utility company shall be allowed to earn an income out of proportion to its investment or fair valuation.

Where the competition exists, the combined investment of the two or more companies involved is multiplied, the operating and maintenance expenses are necessarily doubled, and consequently, the cost of production of electricity is increased. The fact, too, that the streets and alleys are greatly congested by the installation of two or more sets of poles is another reason why the electric service industry should be regulated by law. The regulation of the electric power rate was all over the country has been that the rate cutting seldom lasts more than a few months, and rarely, if ever, more than a couple of years. After the thing is carried over for a period of time, it is always forced back to its original position, and against the resultant unsatisfactory conditions that are brought about, through competition, the public is involved, or through one of the companies being forced into receivership. The question of inviting competition is a matter of serious consequence, and should be decided with the most careful investigation, and level-headed action. It should be decided whether the company already in the field is capable of delivering a satisfactory service to its customers. The reliability of the people concerned with the matter, and the ability of the company to furnish sufficient and adequate service to the public in years to come has an important bearing on the subject. Setting aside other questions, it should be decided whether the local company, other things being equal, is in position to furnish the same quality of service at a lower rate as the one desiring to enter the field. If it is found that they can supply just as adequate service at lower rates, the proper course to pursue is to ask the Public Utility Commission, provided for under the new utility law, to make an investigation and adjustment of rates.

If this plan is not followed out, and competition is introduced, the public will be not only disappointed, but will be disgraced, and the people dissatisfied. The community will have two poor rather than one good company providing service, and, ultimately, the consumer will have to pay rates for their service that will not be a reasonable return on the new utility law, to make an investigation and adjustment of rates.

COMPETITION IS ALL VERY WELL IN THEORY, but where competition exists, the combined investment of the two or more companies involved is multiplied, the operating and maintenance expenses are necessarily doubled, and consequently, the cost of production of electricity is increased. The fact, too, that the streets and alleys are greatly congested by the installation of two or more sets of poles is another reason why the electric service industry should be regulated by law. The regulation of the electric power rate was all over the country has been that the rate cutting seldom lasts more than a few months, and rarely, if ever, more than a couple of years. ANNUAL BLOSSOM PARTY.

Mrs. E. B. Perrine Entertains Many Ladies at Blue Lakes.

The keen pleasure and anticipation with which the ladies of Twin Falls and neighboring towns look forward to the annual blossom party, given by Mrs. E. B. Perrine at Blue Lakes, was in no way dimmed this year when on Saturday last some twenty-five representative women of the Greater Twin Falls country, wended their way to the famous Blue Lakes for this annual social gathering.

Although the wind did blow and dust whirled, all-knowing there was quiet and sunlight, bloom-laden trees and green knolls, and along beautiful Alpuerto creek, dreamy retreats where wind and dust are strangers. So they went, and the glad, happy party whirled from town to the top of the grade in automobiles from where a number, not waiting for the carriages from Blue Lakes, had traveled light heartedly down the long, picturesque, narrow grade, over the ice mound at the foot of the Perrine falls, across Snake River bridge to the ranch

houses where they were directed to the picnic grounds. Following a winding road up the banks of Alpuerto creek, the guests came suddenly to a point from where glimpses were caught of the picnic grounds through the dense trees. Crossing over the little stream on the foot bridge, they arrived at a vast expanse of spot, sheltered by giant spreading cedar-trees and surrounded by dense birch willows. The picnic grounds were divided into one large main dining room on the one side and on the other splashing and tumbling some 25 or 30 feet down over rocks and ledges, and gleaming through the trees in the sunlight the spot was a veritable picture and the most beautiful scenery to be seen from the fair scene to the heavily laden tables under the cedars. A big campfire burned brightly close by from which came the pleasing aroma of coffee.

Everyone partook heartily of the generous picnic dinner and the remainder of the afternoon was spent wandering happily amongst the orchard trees and to the many beautiful flowers of the delighted guests.

Several who were present regaled the other guests with descriptions of the first blossom party ever given here by Mrs. Perrine. That was on Thursday, April 13, 1906. That was the first spring for the new city of Twin Falls and the weather had been ideal. Blossoms were out early and the cherry blossoms were all gone by the last of April. The representative of the first blossom party, who were present at that first party numbered less than a dozen. Toward the close of the afternoon the wind became threatening and the guests departed hastily. There was no bridge across the river at that time but the bridge was built and the guests as they were in the middle of the river the storm broke with terrible force. The horses became frightened and "narrowed their tracks" and occupants into the river. The wind and current combined to hold the ferry in place and the guests were forced to wait for some time before the ferry could be released. The Perrine falls were hurried from the canyon wall almost half a mile to the river. The dam broke with terrible force against the wall, making a spectacle most interesting at any other time. The guests were forced to wait for some time before the ferry could be released. The Perrine falls were hurried from the canyon wall almost half a mile to the river. Read the want ads in the Times.
Want ads speak for themselves; no arguing necessary.

If you want to tell the people what you have, try a want ad.

When the nearest home-buying chance is open to you, you'll get the news in the "Real Estate For Sale" column.

Want For Sale, Lost and Found ads

A repetition of your want ad, even a campaign of classified advertising, may be needed to find the most logical buyer for your property.

A repetition of your want ad, in the course of your quest for a cook, may be good policy.

Our prompt and efficient service cost you no more than service less good. Parrott Optical Co., real opticians. That's all.

WASHINGTON NEWS

Washington, April 29.—Howard Elliott, president of the Northern Pacific railroad, is not afraid of the physical valuation of the properties of his company. He was recently in Washington in conversation with a friend to whom he expressed the belief that it would be desirable to have an official valuation of the railroads. He believes that it will clear the atmosphere generally, and it will definitely prove whether or not the railroads are receiving adequate rates for the service they give—and he is disposed to think that it will result in a surprise to the public in general by showing that the railroads have resources worth more than the nominal capitalization on which they are required to earn interest.

Increasing Values. It may be suggested that roads like that of which Mr. Elliott is the head, having vast tracts of land which was received from the government in partial compensation for pushing construction into new and undeveloped territory where any road would encounter losses in operation for years after it was built, are on a different footing from eastern roads which have no extensive land grants to grow into big values as the country develops. But the eastern roads have terminals in the heart of the business section of every city which they reach, and these, together with their rights of way, once valued at a small price, have appreciated greatly in value. Perhaps the sale to the latter roads has been commensurate with the increase of values of lands owned by the western roads large as the latter has been.

Working for Development. All of the western roads, especially those possessing land grants, are working consistently to build up and develop their territory, to bring in settlers and establish industries which will make business for the roads. They not only induce people to settle in their territory, but they do a vast amount of work to aid the farmers in making better crops. These roads have more freight to haul out, and the receipt of money for this enables the producers to buy more lumber, coal, stock, machinery, clothing and manufactured goods generally, all of which must be hauled in, making revenue for the railroad. It is because of the direct interest in the upbuilding of their territory that the railroads are taking note of the advantages offered by the San Diego exposition for spreading information to the world about the great west. Many thousands of persons from the east, and from across seas, will see the San Diego exposition in 1916, and they will there learn much that they never knew before about that partially developed empire which is drawing much of the best brain and brain of the nation for its development.

The West Alive. Members of congress are showing much interest in the progress of the San Diego exposition. In general, congressmen, though expeditious as valuable as public educators. They induce many people to travel who otherwise would not move beyond their own township. They offer special inducements in the way of lower fares, ingenious routes of travel and moderate prices for entertainment. Western congressmen in particular feel that the San Diego exposition will offer an opportunity for advertising the achievements and resources of the west, which is a rich region yearning for willing hands to develop it. President D. C. Collier of the exposition is a pioneer and empire builder himself, and he fully appreciates the need of more people, more money, more brains, to bring out the resources of the west. There is room for all and independence for all. If it did nothing more than to induce some thousands of people to the opportunities that are awaiting them, the San Diego exposition would be a great blessing to this country.

Marking Time. While everything is abuzzing and alive in the west—and especially at San Diego where the exposition is building—in Washington there has been little but marking time. Congress is busy with the tariff. That is to say, the Democratic caucus is busy with it. Day after day for the past two weeks the caucus has been wrestling with such problems as free wool and free sugar. Any day it may finish its work, but there have been long heated debates behind closed doors between the advocates of free wool and a wool tariff, between those who want free sugar and the friends of a tariff on sugar, and so on down the line "from sugar to zinc."

Blowing Off Steam. The developments indicate how wise Chairman Underwood was when he decided to let the boys "blow off steam" in the caucus and voice all of their objections and protests to various items in the bill before sending it to the house. Throughout it all Mr. Underwood held himself well in hand, smilingly listened to the oratory on the floor, and finally, when the name came, marshalled his forces and calmly voted down all objections, item by item, and the bill—barring perhaps some trivial changes—stood at last just as it did when it was presented to the caucus for its verdict.

Unperturbed. Through all the tariff talk, the patronage fights, the reconstruction of the governmental machinery, due to a change in party ascendancy, there has been a lack of interest, excitement and uncertainty at the white house which has pleased friends of President Wilson and possibly surprised his opponents. Whatever Democrats may think, the Republicans appear to agree that the President is conducting himself creditably, especially with respect to the choice of men for public office.

FILER NEWS

(Filer Journal.) Herb Emarick, who has been living in Seattle for the past year, has returned to Filer and will again work for Frank Brown. Frank Koch, of Filer, was awarded the title of "Farmers' Prince" which is given annually to the farmer who wins first place in a contest at the Academy of Idaho. The next state fair will meet Wednesday May 7 at the home of Mrs. Grover

David. Hostesses for the afternoon tea were Mrs. Grover, Mrs. Allen and Grover Davis. Everyone is invited. Robt. Miller and family left Sunday morning for California. These good people will be missed by their many friends in Filer. We wish them success in their new home.

Instead of two pool tables as originally planned, Earl Murry has purchased six tables. However, he will only set up four at present, and store the balance. When fully equipped he will have a first-class pool hall, and a splendid barber shop.

A large number of Old Fellows responded to the call to meet at the cemetery Monday and put in the day cleaning and beautifying the silent city of the dead. Lunch was served at noon and the day passed in doing grand good work.

Moell, owner of Twin Falls, who recently lost the lightweight championship to Dutch Adkins, of Filer, was in town last Tuesday trying to arrange another match with Adkins, to take place either in Buht or Twin Falls. Receipts to be divided on any terms public to Mr. Adkins, and with a reasonable fee to Moell.

Mrs. Blakeley was a Twin Falls visitor Tuesday.

F. C. Graver was a business visitor to Twin Falls yesterday.

Butch Adkins went to Buht last Saturday to make a few days' visit.

Earl Murry was a Twin Falls visitor Tuesday, looking after the shipping of the pool tables he recently purchased.

Miss Maude Dalt was a Twin Falls visitor the first of the week. She expects to leave shortly on a visit to a sister who lives in Texas.

We know what would happen. Frank Brown has purchased an automobile. It is a Buick 48, and of course that means it is a peach.

"Glen" says the battle cry all along the line. We understand that Wallis is headed this way and as he is hard pressed it won't do to put the matter off.

J. T. Burgett, the harness man, has rented the Munyon building on the corner of Union and Main, and has a large stock of harness on hand. Filer has needed a harness shop for a long time and everybody is glad that Burgett is going to branch out with additional goods.

Judge Taylor, well known to many people on the river, having conducted hotels in Twin Falls and Buht, and now of American Falls, has rented the Filer hotel and will take possession today. His judges know how to please the traveling public and the Journal predicts that he will make good in Filer.

The village trustees have ordered the marshal to not buy with the curfew bell from now on. There is no reason why the curfew bell should be housed at the proper time evenings.

Where parents neglect this duty the officials will do it for them.

All dogs a mile and a half at night are considered "vicious" in the eyes of the law, and their owners are liable for their behavior.

There are too many dogs here, and it is hoped that a thinning out process will better conditions a whole lot.

This week new stairs were built at the rear of the opera house, thus securing two exits in case of any unusual happening.

It is necessary for the owner in order to secure greater protection to the public. R. H. Goodenough furnished the mechanical and electric work and certainly did a splendid job.

Major Reed and Mr. Dean were Filer visitors last Friday afternoon for a short time. They were looking for the county over and meeting the people in a social way. The major will return later on and meet with the Commercial club and all others who are interested in seeing this tract well represented with displays of grains, grasses, etc., at the big exposition in 1916.

A new real estate firm will open in Filer. C. W. Green and Art Anderson will enter the field here and will have office in the new building being erected by H. H. Schildmann. This firm will also handle fire and life insurance and do all those things that goes with the real estate business. Both are well known here and the Journal speaks a flourishing business for the new firm.

Mrs. Alberts will go to Buht and cook for J. W. White, hotelier.

The dance Saturday night was attended by 31 couple and was an enjoyable affair. The next dance will be on Saturday night, May 10.

The Women's club met yesterday with Mrs. Shearer. Mrs. M. J. Sweeley of Twin Falls was a guest of the club and made a very interesting talk to the club members on club work. Refreshments were served.

Every indication last spring was surely here was noticeable last Sunday when our people headed for the picnic grounds at Shoshone falls. Mrs. Shattner chaperoned her daughters on a pleasant excursion to that beautiful spot. While it was pleasant all day in the canyon it became quite cool before the party returned home.

In the early evening Mrs. Shattner and her daughters Mattie and Mary, Misses Barnes, Kerr, Glasco, Moseley, Brown, Bear, Mr. and Mrs. O. A. Wood and Mrs. Elmer—Haggs and Julius Strauss.

The officers of the Commercial club will call a meeting soon to make the preliminary arrangements for the annual field day. It will be larger and better this year than ever. There has been much good stock raising and it should be a fine display along this line. The work will be taken up early this year in order that the officers may have ample notice to arrange something of a "stunt" before the display. Every line of fruits, vegetables, grains and grasses will have a space.

Major Reed, chairman of Idaho's San Francisco exhibition, will be here and select from Filer display booth this year. Let us not disappoint him. We can furnish the stuff, if our farmers will make a little extra effort. It should be a pleasure for them to do this great work. Let us show the world what this particular corner section can do. Will you help?

With the opportunity to step right into a better position, with doubled pay, and a chance to see the world, you watch the classified ads.

THE WHITE PALACE JEWELRY STORE THE STORE THAT LEADS

Bargain Sales of Real Estate

We want to close out some of our holdings in this County, and offer for sale:

A 60-acre tract; out from Buht; under the Twin Falls South Side Canal System; good land; rolling; for fruit—there is nothing better in the County; just the thing for a grain, grass or stock ranch on a large scale; part cleared and plowed ready for crop.

An 80-acre improved farm in the Buht County; some orchard and grass; on telephone and R. F. D. Route.

Three separate places between Twin Falls and the Snake River: two of them only a mile and a half from the City and near the electric car line now about completed; under cultivation; just right distance for small fruit tracts; will sell, if desired, in ten or twenty-acre parcels. The other has ten acres of stock raising to "see" the finest fruit anywhere; the car line runs past this one mile south of Shoshone Falls.

Some good residence property and vacant lots in Twin Falls, including one six-room modern house with barn, only three blocks from postoffice.

THESE ARE OUR OWN PROPERTIES AND PRICES ARE REDUCED.

FAIR TERMS WILL BE MADE FOR DEFERRED PAYMENTS.
