PRICES EASE AGAIN ON WOOL MARKET

Manufacturers Delay Heavy Weight Openings, Basis For Values On East Coast

BOSTON, March 25 (AP)—The Commercial Bulletin will say tomorrow: "A little wool has been sold this week but at prices which show a slowly ebbing tendency. The manufacturers have delayed their heavy weight openings and so the wool trade has no basis of values in the finished fabric upon which to predicate wool values with any assurance."

The market, moreover, has been unsteady again by the action of the National Wool Marketing Corporation in making a sale of 3,000,000 pounds of adult mohair... Other so-called regular uses of the staple, however, are disturbed by the sale of medium and adult hair for 1930 and 1931 is calculated at about 26 cents. The tariff usually collected on raw wool is 30 cents per cwt. (34-cent clean content).

This hair, it is announced, has been sold to carpet mills with the understanding that it will not be used for other than carpet purposes. Other so-called regular uses of the staple, however, are disturbed by the sale of medium and adult hair for 1930 and 1931 is calculated at about 26 cents.

The wool trade, naturally, are wondering whether they may expect the wool holdings of the coop to be forced on the market, and so they are moving with unusual caution. "Little wool has been moved in the West and that mostly in Arizona at slightly lower prices. The wool markets are about steady."

Some Markets Keep Holiday Babson Points to Signal System Indicating Clear Business Track And Reveals Change in Attitude

STATISTICIAN DECLARES LAW OF ACTION AND REACTION NOW WORKING TO BRING ABOUT GRADUAL IMPROVEMENT IN BUSINESS AND INDUSTRY AND SEES POSSIBILITY OF BETTER FARM PRICES

BY ROGER W. BABSON BABSON PARK, PA., March 25 (AP)—I am just as optimistic now about business as I was pessimistic about it before the crash in 1929. My optimism is based not on hopes or wishes, but on facts and figures. Among these facts is the position of the Babson chart. This chart (compiled by the Babson Survey Research Society) is a physical volume of business activity now indicates clearly that the area of depression is more than half consumed. The law of action and reaction, as shown by the Babson chart, is now working to bring about gradual improvement. From 1929 to 1932 we had reaction—decline. From 1932 on we shall have action—improvement—even though the gain will be gradual.

There are two sets of signals to watch: first, those that say the track is being cleared; and second, those that say the train is coming. Here are some that mean a clearer track: 1—Dents have been reduced 51 per cent since that caused the 1929 depression.

Expenses have been cut—individual corporations, corporations and government expenses (including those of the Federal Reserve Bank)—are getting down. Many say that if wages are reduced there is less buying power. The contrary will be the case. When wages are reduced, there is less buying power. Today, under the law of depression, nearly everybody has come to a common sense "acceptance" of the fundamental principle of sensible living and right thinking.

Out of these hard times is being born a new spirit of thrift and industry—something which the majority had forgotten before the 1929 crisis.

Depression is showing that we must all make sacrifices for the common good. It is a depression that is not only clearing the way for a new era of business, but it is also clearing the way for a new era of living.

General business as measured by the index of the X-Y Line, compared with 31 per cent a month ago, even with adjustment for the holiday movement. (Copyright, 1932, Publishers Financial Bureau).

One of the best angles to watch is wholesale commodity prices. A commodity price index is being compiled by the University of Chicago, and while an immediate upward movement in the general wholesale prices index has abated buyers' mania.
