

KIMBERLY GATHERS AND DRIES PRUNES

Yield of 12,000 Bushels of Fruit Looms From 50 Acres

Kimberly, Oct. 8 (Special to The News)—Products of the entire 50-acre prune orchard containing approximately 5000 trees, belonging to Harry T. West, one mile east and four miles south of Kimberly, will be dried this year and offered for sale locally.

Work commencing and drying the crop began a week ago. At the present time 60 persons are employed in picking and operating the drying machinery which was installed by Mr. West three or four years ago. It is estimated that approximately 12,000 bushels of the fruit will be treated and prepared for market.

Modern Drier

The plant is a thoroughly modern, two tunnel, oil burning type. Air heated to a temperature of 180 degrees is blown over the fruit by forced draft, the drying process taking from 20 to 30 hours, depending upon the humidity. The plant has a capacity of 7000 pounds of green fruit, which is finished in 24 hours, producing 8000 pounds of dried fruit of operation. The plant is operated day and night and is estimated by Mr. West that about 30 days will be required to handle the entire orchard output.

Prunes were packed in 25 and 50 pound boxes and in cotton bags to suit the trade. Anyone wishing to visit the ranch and witness the operation of the plant will be welcome, Mr. West says.
