AT THE THEATRES

ORPHEUM

Although the Orpheum has faced death and death in its continual and adventurous life, it remained for the amateur pictures to furnish his narrow escape. As a soldier in the Philippines, he joined the rebellion, became a sheriff, marshal and ranger in Oklahoma, Kansas and Texas, the inspired Fox star can look back upon a career of which he is very proud. His respect by the smallest kind of a margin, he knows much of bullet holes, knife slugs and broken bones, but during the course of his career he has never been hit. The scene of the fox's return to the Orpheum theatre today, the incalculable of a couple of seconds resulted in bawling him down the aisle.

The accident, which nearly ended the star's life occurred when a mine exploded in a roadway, exploding prematurely, caught him and Tony, his co-star, in the mine entrance.

Mr. Fox's accident was so serious that he had to remain in bed for a week. At noon a beautifull dinner was served.

The drama and literature department of the Twentieth Century club will meet at the home of Mrs. R. C. Williams, 1120 Main street Friday afternoon at 2:30.

Bryant Party. — The Bryant club entertained at the home of Mrs. F. D. Bryant, 315 South Fourth avenue east Saturday evening. The house was attractively decorated with spring flowers. A short program was presented by the girls, followed by a short dance.

The drama and literature department of the Twentieth Century club will meet at the home of Mrs. R. C. Williams, 1120 Main street Friday afternoon at 2:30.

Holiday Party. — Mrs. J. H. Hansen of Bell Lake is spending a few days in the city the guest of her daughter, Mrs. T. P. Murray.

Harmon Club. — The Harmon club was entertained Wednesday afternoon at the home of Mrs. Alexander. The usual number of games of bridge were played. Mr. Barker, band director, sang a solo. The harmonists served daily refreshments.

Holiday Party. — Mrs. J. H. Hansen of Bell Lake is spending a few days in the city the guest of her daughter, Mrs. T. P. Murray.

Highland Park Club. — Mrs. William Hansen was hostess at the Highland Park club Wednesday afternoon. The usual business session was held preceded over by the president, and the remaining time was spent in socials. Delightful refreshments were served to 12 members and Miss Edna Carter and Mrs. Hess of the Legion. The next meeting will be held June 4 with Mrs. Floyd Dandy.

Marine Masters. — Marine Masters celebrated her birthday with a theatre party at the home of Mrs. L. C. Johnson, member of her young friends. After the theatre they enjoyed refreshments at Herbert and Rambo's parlor. She was the recipient of several presents on this occasion.

Land Granted to Lafayette. — In 1808, Lafayette was given ten different grants of land along the Mississippi river, and in 1812 he was granted another which comprised 12,200 acres of land west Florida. Tallahassee is now located on this site. It is impossible to give the exact boundaries of the grants as the land was not surveyed at that time except by special surveys which were indicated by familiar landmarks.

Perseverance Wins! — BUT IT DOESN'T WIN ANYTHING FOR THE HEN-ON THE CHINA EGG!

FLORSHEIM SHOE. — They've stood the scuff of many miles, giving loyal service.

The snug ankle fit—
The refined appearance—

And the conservative styles appeal to the man of good taste, most styles \$10.00.

"Tis Not Sweet With Nimble Feet to Dance Upon the Air"

This remarkable news picture shows the six girls, one of the six girls to be honest of Ambles, La., being interviewed when asked if they were fit for the ballroom. Note the looks unchanged to guard the girls, and the late boy, feeling curiously at right. Below, the last photograph to be taken of the six condemned men.

MURTAUGH.

Mr. and Mrs. D. Turner and family of Hansen spent Sunday with Mrs. Turner's sister, Mrs. Jeddie Rowley, James Mathew was a business visitor.

Mr. Turner was born Saturday, to Mr. and Mrs. Ray Major in Golden Valley.

Mr. and Mrs. Callow of Hansen spent Sunday with their daughter, Mrs. Mrs. T. D. Nard and family were re-

turning from a trip from California, having been here for two weeks.

Word was received that Mr. and Mrs. T. D. Nard and family were re-

turning from a trip from California,

having been here for two weeks.

Mr. and Mrs. Harold Nelson made

their first visit to Twin Falls Saturday for a brief visit with her

husband and son Dick of Paul

City. They will work with Murtaugh

friends before departing for Washington Saturday.

Word was received that Mr. and Mrs. T. D. Nard and family were re-

turning from a trip from California,

having been here for two weeks.

Mr. and Mrs. H. W. Morrison

and Mr. and Mrs. B. F. Jahn and son,

Glen, will leave soon to spend the

summer in Oregon and Washington

and later motor to California where

they will spend the winter.

MURTAUGH school closed

May 16, with seven eighth grade

grades who were Loraine Becker, Velma Love, Melvin Williams, Robert Dunlap, Robert Breeding, Clarence Rose and Roy Decker. Miss Lucile Taylor, also graduated out of the interesting speaker, Mr. Gendel of Burley addressed the graduates and chose for his subject "A Task Unfinished". He advised the students that they should be "responsible and diligent and complete their education. A brief

program was well rendered, and ended by all the Superintendent, Bell

and his wife, the trustees, in conjunction with the teachers and school trustees, which ended with a very suc-

cessful school year.

THE BEET LABOR SITUATION

The matter of obtaining labor to handle the prospective beet crop for this year is causing the sugar company more concern than in former years. Many people do not realize the expense that the sugar company is to, in rounding up and bringing to the beet fields the necessary labor to handle the crop. Already several men and automobiles are out trying to engage Mexicans to come to Burley and it will only be through the influence and personality of the management of the sugar company if labor can be obtained to handle the beet crop on the south side of the project. It is about as hard to get beet laborers to come to Burley as it would be to get a negro to join the Ku Klux Klan, and while the grounds for this feeling among the class of men on whom we have to depend, if the beet industry is to continue in this vicinity, may be exaggerated, yet it is patent to everybody that the sugar company has not had the co-operation of the city to which it is entitled. And in this connection, we want to add that this is a matter that ought to be taken into consideration at every city election. The last two years have demonstrated that the only crop that will bring this country out of the dinks is the beet crop and unless the farmers have the co-operation of the business men in the town, the town as well as the farming country will go down. The business and property interest of our town are wholly dependent on the furnishing industry and if that fails there will not be enough people left in Burley to furnish talesmen for a jury in a justice court and the county seat on wheels again, en route to Oakley or Malta to accommodate the center of population.

The sugar company has furnished the backbone of all the business of the project and its treatment of the beet raised speak for itself and the payment of the different bonuses, in addition to the standard price of beets demonstrated what the company will do for the raisers if given an opportunity.

While in a sense the matter of expense is of no great concern to the sugar company, as this has to be paid by the raiser and consumer, but the company realizes that the price of sugar may just always be what it is now or has been for the two years and in order to keep this industry going and to pay such a price for beets as will enable the farmer to raise them profitably, the expenses must be kept as low as possible. In line with this situation, the question of entirely segregating the sugar plant and a tract of land surrounding it from the town has been considered, with a view of establishing permanent homes for a number of laborers who would become permanent residents, with housing, houses accommodations and a company store or commissary. By doing this within a few years this class of labor would in a measure a permanent fixture and the money expended by the farmer and sugar company in raising a crop of beets would stay in the community, some of it expended in the way of taxes and in the purchase and consumption of farm products.

It is most unorthodox to say that the moral as well as the religious progress of my community is synonymous with financial prosperity and we know of no more efficient means of augmenting the sorrows of satan than by leading every effort to relieve the financial distress that prevails in this community. Every resident of Burley depends directly or indirectly on the farmers of this project for his or her living, hence sugar dealings with our only source of livelihood demands more or less concessions, or what might be resented by some as condescension if it will in any way help out that class of our citizens who produce our source of income. Poverty and financial conditions are conceded as being main elements of the wave of crime that has swept over the country in the last few years and we doubt if the needs of the moral and religious hysteria that has seized some people in our town will take very deep root in empty pockets and many empty stomachs.

It is not visionary to predict that with the additional water that will be available from the American Falls project and the adaptability of the climate and soil for raising beets, that the Snake River valley will, in a few years, be the richest farming section in the United States, as well as the home of a happy and contented people. The world is over and by handing on the beet industry and providing every means for maintaining it, we will soon retrieve our losses and the past will be forgotten, in the prosperity of the present, and speaking locally even if the supreme court did relieve us of the responsibility of a postal school student body, we still have a more substantial institution in the Amalgamated Sugar Company. The sugar industry is to Burley, in a small way, what the steel industry is to Pittsburgh and vicinity; for without it, Allegany county, Pennsylvania, would not be a good goat pasture—Burley Herald.

Jews Used Fireless Cooker

It is impossible to give an exact date when the fireless cooker was first used. It was known to the Jews centuries ago, when they carried their "sukkot" (tabernacles) and parents are being preserved for posterity as a type of literature once popular. They will be found in old books along with other ancient classics and are collected by antique collectors.

Dime Novels at University

A dime novel, or a short story, is a short, printed narrative, 400 or 500 words long, and parents are being preserved for posterity as a type of literature once popular. They will be found in old books along with other ancient classics and are collected by antique collectors.

DAIRY FACTS

Dairy Animals Help in
Country's Meat Supply
(Prepared by the United States Department of Agriculture.)

About 17 million of the matured dairy animals in this country find their way to the slaughter and packing plants, according to the United States Department of Agriculture. In this percentage of the total number of slaughtered dairy animals reported on farms by the last census, and the average live weights and dressing yields per animal per year, the result shows about 120,400,000 pounds of carcass beef produced from dairy cattle during the year 1923. The quantity of carcass beef production of the United States for that year, probably 80 per cent of all the cattle slaughtered are of dairy breed, was approximately 1,000,000,000 pounds. The total number of cattle in 1923 and the resulting figure multiplied by the average live weight and dressing yields, the amount of real product of carcass beef is about 1,000,000,000 pounds for the year 1923.

The principal conditions which cause dairy cows to be discarded for meat production purposes are old age, disease, infirmities, lack of milk, and sterility. Many old dairy cows and others that are unprofitable as milk producers are fattened for a short period of time to produce fat property "fat cattle" for a rapid gain, although the tendency is to accumulate fat externally and in the body cavities rather than to produce it internally, thereby reducing the efficiency with which to build. All of these considerations are relative to the amount to be expended for the new cattle. It is important that the cost of the new cattle be kept at a minimum, especially if the house and site are relatively essential.

In the selection of the place for the house, economy has importance. Interest in home-building is a healthy indication for any community. Its citizens, in becoming more numerous, are always becoming better acquainted with their duties of responsibility to the community.

Too much attention to style should be studiously avoided, as the house should be planned with economy and distinction to any home. Much time should be spent in selecting the place best suited to serve the needs of the family.

One of the first steps taken in the herd for various reasons makes up a part of the meat from dairy cattle. They are seldom suitable for meat purposes, however, unless the carcass being used for dried or canned beef and the remaining portions of the carcasses for sausages.

While the quality of beef produced from cattle is not necessarily that of lower grade, this is not necessarily true with respect to the meat obtained from dairy cattle. Probably 90 per cent of the meat from dairy cattle is about the same quality as cattle.

Most of these animals, if properly handled and slaughtered, while young, produce a high grade of meat.

Comfort in Hot Weather— Necessary for Dairy Cow

During the hot summer months, dairy cattle, like other animals, are particularly sensitive to heat. The ability of cattle to tolerate heat is largely dependent upon their owner's in not supplying some one of the many necessary comforts for hot weather, milk and butterfat production.

One of the most common of these is the furnishing of drinking water.

A cow in milk requires about 100 pounds of water daily. Dry dairy and heavy producing cows frequently double this amount. During hot weather, a cow must have the normal supply of water, and should be supplied with shade, adjusting her supply to normal for hot weather needs.

The question of how often cows should be watered, when they are not grazing, is a difficult one. This varies with the condition of the weather, kind of feed, etc. It is safe to say, however, that cows in milk should have water at least three times a day.

**Profitable Cow Ought
to Produce Much Milk**

"It is estimated by an agricultural engineer, that to be profitable a cow ought to produce at least 3,000 pounds of milk in a year. In producing this quantity of milk, her butterfat content should be 4 percent. In addition to the sale of butterfat, the skimmed milk, the manure, and the calf must be reckoned as of value.

Dairy Water Supply Is Of Great Importance

Cows which drink 100 pounds of water daily require 100 pounds of water for their metabolism, and instances are on record in which heavy milkers have consumed more than 300 pounds of water a day. A gallon of water weighs 8.34 pounds.

Young Calves Should Be Fed Good Grain Ration

Young calves should be fed grain as soon as they will eat it. Ground oats, corn chaff and wheat bran, mixed in equal proportions, constitute a good grain ration. When the calves are a few days old, remember also that calves must have plenty of milk.

Value of Soy Beans

Young calves, like other young animals, are fond of soy beans. For low, station price, no soy beans are worth \$200 a ton when oil meal is worth \$15.

High Quality Butter

High quality butter is the greatest demand, and it is natural that creamery men should try to pay more for the better grades of cream.

A good cow will always give good returns for feed consumed, as long as she is fed moderately.

GOOD PLANS ESSENTIAL IN HOME BUILDING

Design 1991

M. L. KEITH

FIRST is an important point of reference for those who plan to build in the desire to build a home. It must be remembered that in determining the plans for your home many influences are to be considered, the location of the property, its size, and the character of the neighborhood, are just as important questions to the home builder as the size of the house to be built, the number of rooms, the cost of the house, the cost of the land, and the material with which to build. All of these considerations are relative to the amount to be expended for the new house. It is important that the house be well-constructed, and that the house area be adequately provided.

In the selection of the plans for the house, economy has importance. Interest in home-building is a healthy indication for any community. Its citizens, in becoming more numerous, are always becoming better acquainted with their duties of responsibility to the community.

Too much attention to style should be studiously avoided, as the house should be planned with economy and distinction to any home. Much time should be spent in selecting the place best suited to serve the needs of the family.

DESIGN 1991
FIRST FLOOR PLAN

The plan of the house pictured on this page can be obtained at a nominal price by writing to the author.

Just a little small surface room is needed for the garage, either with a separate entrance or with the central porch door. Entrance to street or living room which surprises one in so small a cottage. The outside chimney is cement rendered, and the interior appears made of concrete, with a high grade of insulation.

The floor has just the right pitch and the dormer the proper line and proportion. The windows come in sizes to suit the needs of the house.
