Daily Poem
A PLACE OF DREAMS
 Harriet Marikhan (11)
 A maple leans beside the brook,
 There she sometimes stilly sits.
 At hide and seek in this cool nook,
 Just at the end of day,
 Like golden letters through the trees,
 They seem to swoop and dart,
 Among the leaves scattered by the breeze,
 And gaily from their art.
 A fairy place, this woodland scene,
 Where jeweled waters gleam,
 And trees are touched with gold and green,
 And here I often dream
 Of sunny noons, beneath alien skies,
 And fanning mountain streams,
 And desert palms with sunset dyes,
 And romance and joy and tears.

WOMEN'S CLUBS of the new order have come to be respected by the community in matters of civic improvement, sociological betterment and political idealism.
 It is largely such forward-looking, progressive clubs which the 200 delegates to the sixth annual convention of the Idaho State Federation of Women's Clubs met in Twin Falls last week. Twin Falls is indeed honored to have the privilege of entertaining its guests, women whose work in Idaho can receive only the highest appreciation.

That organized endeavor to improve the status of women of the land economically, socially, politically, has been successful is strongly evidenced by the many bills of vital importance to women, which have been passed by the nation, states and local bodies of government largely through the influence of united club activity. Their reputation for sponsoring the better things in legislation has become public opinion many times in the right direction. In the agitation for world peace the women of this state and the nation are more largely than any other group, responsible.

Specifically the federated club women of Idaho are bettering American home life; encouraging American citizenship; assisting in a program of education; sponsoring fine arts; maintaining the most interesting international relations; identifying themselves with the better things in legislation; and are giving proper educational publicity to the vital concerns of women.

There is indeed a great work and the good will of the entire community is extended to them in wishing them success in their undertakings and a visit of pleasure as well as in appreciation while in Twin Falls.

A SERMON IN STONES
 SIR ARTHUR CONAN DOYLE the other day, in a British periodical, sought a change in the laws so that mediums might operate openly without fear of prosecution.

Now an announcement of that kind is sure to draw something like a sneer from those of us who do not believe in spiritualism. We are more or less indifferent about mediums but we are not to sneer; but we have a way of looking down on people like Sir Arthur, who believe that there are supernatural forces in this world that can be tapped at will, by certain gifted individuals.

Well, probably we're right. A great many estimable men have been deluded by fables and charlatans. An eager desire to see some intangible, deathless spirit pervading the cold furniture of the workaday world can lead a man into the snare of the spiritist.

But, after all, we needn't be so sneaky about it. We can deny the supernaturalism of dark-circled room and moving table all we please; but every moment of our lives we are surrounded by a glamour of the making of the world, so complete, so far-reaching, that the stories of the spiritists pile into insignificance.

Suppose, for instance, that you deny all religion and resolve to stick to the most matters-of-fact scientific formula you can find. What then? Science will tell you that all bodies matter, from a steel girder down to a dish of custard pudding, is made up of that mysterious, invisible force called electricity!

A lump of clay contains as many mysterious as a lump of steel, or a member of night. The spinning stars of our solar system are duplicated in the whirling atomic nebulae of a piece of coal. A solid steel ball contains vacant spaces as puzzling as the famous "dead end" of the Milky Way, where no light has glimmered since the making of the world.

What, in the face of this, are you going to do about it? Will you cling to a matter of fact formula when the very stones in the street contain riddles too profound for the wisest man to unravel? You can't if you wish, snuff disdainfully at the credos of the spiritists, and laugh at their stories of ectoplasm and disembodied voices; but you must come back in the end to a realization that the real world is more mysterious and incomprehensible than the most ardent spiritist's eye dreamed.

If makes Gene Tunney uncomfortable to hear profanity. What miserable days he must spend on the golf courses!

Now New York has a "mother bandit," that should be a warning to all of us—where Rod Grandin go, these evenings?

House rents are 12 1/2 per cent cheaper than they were in 1924. Nobody uses houses much any more.

Or send some power the ruffic side in in ser... as there is no when we bank our... in the Sunday parade.

The Smith Side of the Case
FOR SMITH, AGAINST HOOVER

THE LEADERS of middle-western agriculture have told the world who are the friend of the American farmer and who are his enemies. Meeting at Des Moines August 21, the Corn Belt committee, speaking for a million and a half middle-western farmers, endorsed Governor Smith, Democratic candidate for president, and rebuffed Herbert Hoover. This committee is composed of the leaders of 32 farm organizations in 14 middle-western states.

The committee adopted resolutions pointing to the fact that Governor Smith has pledged himself to the kind of sound legislation which agriculture has been demanding in vain from a republican administration during the past eight years. It also demands this title with that taken by Herbert Hoover, who has rejected that kind of farm legislation.

The committee urged the farmers to support their friends and oppose their enemies, regardless of party. It also approves the democratic platform and platform of the Democratic National Committee, who twice voted for the Mr. Hoover in 1924 and 1928. It also approves the platform of the "Equality for Agriculture" to the benefit of the White House.

Best-Editorial of the Day
GNAW BONE

THERE is something profoundly original about the decision—the honest, frank one—of Westport, Indiana, to restore to the town its original name, Gnav Bone.

There was nothing distinctive, nothing interesting about the name Westport. There are a great number of cities of that name in the United States. But Gnav Bone—that is an American name; nobody could imagine a Gnav Bone in France or England. It has the pungency of the pignons; it is as characteristic as Kalooka, or Kalamazoo, or the Saguaro.

Maps of the United States team with picturesque names—cities and towns named after places in Europe which they do not resemble in the least.

Americans are so prone anyway to feel themselves superior to the rest of Europe in things. So it is a relief to hear of a town, art, clothes, literature, and many other things, that is willing to be itself under a name like Gnav Bone.

The Hoover Side of the Case
A SOLL TO DEVOTEES OF THE FEE

EFFECTIVE CONTROL of surplus crops is one of those phrases that will cover any and every kind of surplus crop, whether it be of the Canadian wheat pool, which has no government aid except that of an enabling act. But it gives a certain amount of control.

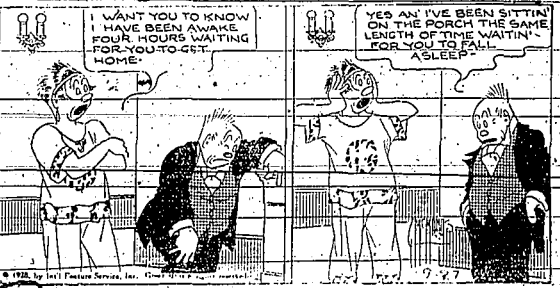

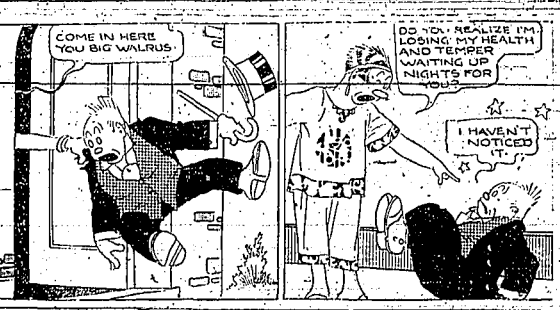

In order to live up to his platform Smith would have to find a way to distribute over an entire crop the surplus of the surplus crop. The only practical means, therefore, is the platform of a surplus pool, which is the only way to do it. There is a far simpler way, and the Canadian wheat growers have found it, though the greater part of their surplus is still in the hands of their members.

It is a far simpler way, and the Canadian wheat growers have found it, though the greater part of their surplus is still in the hands of their members. It is a far simpler way, and the Canadian wheat growers have found it, though the greater part of their surplus is still in the hands of their members.

Whether or not one agrees with the stand of Al Smith, it is a far simpler way, and the Canadian wheat growers have found it, though the greater part of their surplus is still in the hands of their members.

The millions that Philadelphia bondholders are said to have in the banks no longer can be called liquid assets.

AMERICAN DEMAND FOR RUBBER OPENS AFRICAN EMPIRE

Progress of Plan to Create Our Own Source of Supply in Liberia Foreshadows Freedom from Foreign Control

The business of building a new empire in Africa is well advanced. American energy and American methods are converting one corner of that primitive world into something like a miniature America. Before long the far land of Liberia will have modern schools, power plants, motor roads, chain stores and other familiar institutions of American life. Already our movies afford the natives a glimpse of us at home. Engineers, agricultural specialists, medical men and more of many crafts make up this army of empire builders. All of this is possible because, for the first time in the march of the centuries, organized progress has come to a land that endures almost as it was in the beginning.

Even the name of Liberia falls strangely upon the ear in this hurrying world of ours. But the man with a smattering of his geography still in mind will recall that the country lies a degree or two above the equator, almost at the western tip of Africa. If his history is as clear as his geography he will remember that Liberia was the first and only country to be the result of the negro republic. Colonized a hundred years ago by some of our freed slaves, it was soon to become the scene of the black man's original experiment in self government.

That he has justified many hopes is proved by the position of Liberia today, a country stirred by the touch of Western progress. Its resources are a guarantee of future development. Politically it is well established. When the League of Nations convenes Liberia has a seat at the round table. Relations with our own country have been especially close. In fact Liberia looks to America as its best friend. But in spite of old ties and natural friendship, we never took an active part in Liberian development until the last year or two.

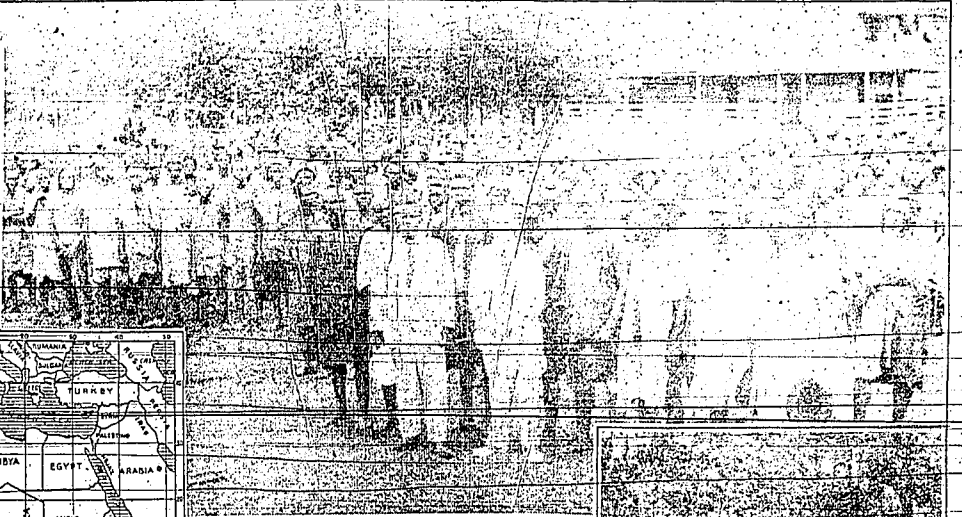

Thus the little republic founded under such stress has gone along its way, doing as best it might. Beginning with nothing, a great deal has been accomplished. Descendants of the colonizers have brought a measure of civilization to the 2,000,000 natives. But the task was a huge one indeed and progress limited to the means at hand. Doubtless the history of Liberia, of all western Africa, would have continued its slow evolution if the needs of modern America had not turned interest that way.

Indirectly the automobile was destined to alter the course of history. With the automobile came the world need for rubber. Although this precious substance was first found in the Amazon valley, control and development long since passed to the Middle East, where British and Dutch planters now raise practically the whole supply. In an effort to "corner" this supply the British government passed a restriction measure that has cost the American automobile at least \$100,000,000 since 1922.

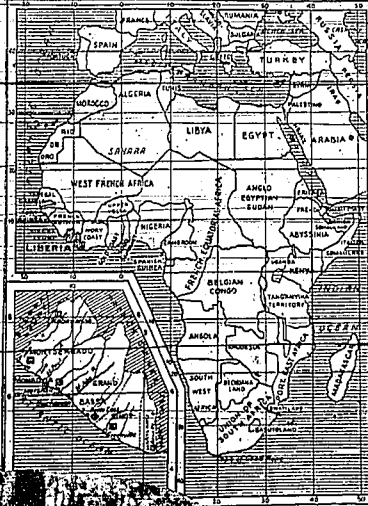

Apparently there was no means of relief; certainly no early relief. It takes five years for a rubber tree to become productive and such trees can be cultivated only within a few degrees of the equator. Seemingly the American consumer could do nothing but pay the bill. Yet there was something that might be done. Harvey S. Firestone, president of the Firestone Tire & Rubber Company, sat down in his private office at Akron, Ohio, and wondered how he should undertake the job.

Mr. Firestone was one of the pioneers in tire manufacture. He probably knows as much about the subject as any other man. And he reasoned that the increasing need for rubber meant complete surrender to foreign growers unless a new source could be found. But how to find it? The answer involved a world search of more than two years, which ended in Liberia. Climate, soil, government, people—everything invited to the biggest industrial enterprise known to western Africa. It really is more than that—the conversion of the primitive.

In this way the empire builders turned eastward, instead of westward, as the cause of empire has been said to travel. They were a force of young men, carrying surveyors' chains, of young doctors, many of them inventors, of experts in soils, digging everywhere; of trained "rubber men" and every trade needed to be the empire from its primitive fastness. Surely American business never knew a richer romance. Not since the winning of the west were we engaged in such an enterprise. Where the west was won by many men,

Mature rubber trees on Firestone Plantations in Liberia.

Liberia's place in Africa and (in the smaller map) the Firestone concessions, which are indicated by the black areas.

Inspecting opening up of groove in rubber tree to facilitate flow of latex.

500 natives who heard about the Firestone development and walked from the interior for 10 days to obtain work on a Firestone plantation. They have just been examined and vaccinated by doctors and are ready to go to work.

must be levelled and prepared for planting. After overcoming these varied difficulties the American forces have planted 35,000 acres within the year, a record for any organization in any country.

Five years from this writing the rubber seedlings will be sizable trees, and the rubber fluid (latex) will soon be converted into tires for the American automobile, right from its own farm, so to speak. Next year it is hoped to raise the record several notches higher. But how many years will be required to plant 1,000,000 acres is a matter that nobody guesses about. The point of importance was planting the first 35,000—a long step toward the greater goal.

About 150 miles from the Du plantation is the second big field of operation, at Capo Palmas, twenty-five miles inland on the Cavalla River. Although the average cleared and the organization engaged is somewhat smaller, this operation practically duplicates the other. Additional plantations will be established and each time there must be stores, power plants, hospitals and all the other essentials of life created in the wilderness.

With both of the new plantations on rivers, but considerably removed from one another, it becomes necessary to join their activities by water transportation. The first of the Firestone fleet is the Duavalla, a hundred-foot schooner to ply along the coast. Others will follow as needed and the day seems not far distant when a trans-Atlantic service must be opened. Progress has arrived in Liberia; the past gives way rapidly to the present.

The staff of Americans carrying on this empire building has direction of 15,000 natives, a number certain to be largely increased as the work has hardly begun. Every article used in development up to this time has been transported thousands of miles. Scarcely a coal could be bought in the country. Each nail and screw had to be brought from home. In the work of hygiene these problems are multiplied and intensified. Everyone knows that tropical countries have a large quota of diseases. Liberia is more fortunate than many, though beset by common ailments. A Firestone endowment fund granted to Harvard University has made it possible for Dr. A. W. Sol-

500 natives who heard about the Firestone development and walked from the interior for 10 days to obtain work on a Firestone plantation. They have just been examined and vaccinated by doctors and are ready to go to work.

ly for his operator. "Just get Mr. Jones for me if he is in his office down on the Du," if the year to come, many trees already set out in the first stage of operation are reported as making rapid progress, which encourages the belief that production from the trees will easily begin within the 5-year period. The area cleared in 1927 was about 20,000 acres and the 5,000 acres yet to be planted will soon come under cultivation. Other extensive areas are to be cleared during the coming season and planting pushed forward with all possible speed.

Mr. Firestone will not only inspect and organize the field force, but expects to give special attention to the task of supplying this force through the stores now being established. This later enterprise presents enough problems to keep any man busy. It takes a nice judgment to know what sorts of hairpins should be ordered for the Liberian trade, along with the thousands and one articles demanded by natives and Americans. As the stores develop their plan of operation, they will handle almost any article that can be bought in a five and ten-cent store at home, added to thousands of necessary articles sold by the hardware dealer, the drug store and the grocery. In fact, they will be dispensing stores transplanted on a smaller scale.

An effort to introduce hygiene and medicine has come under Mr. Firestone's attention. So far the taking has been a little sickness among white forces and a few malaria cases among the natives. It is hoped to improve the natives gradually, the benefits of

American staff has a reservation field and comfortable quarters, living in the counterpart of an American bungalow transplanted to Africa. A hospital serves American and native workers; hygiene goes hand in hand with industry.

Here it is that the American staff comes in the essentials of life—created in the wilderness. With both of the new plantations on rivers, but considerably removed from one another, it becomes necessary to join their activities by water transportation. The first of the Firestone fleet is the Duavalla, a hundred-foot schooner to ply along the coast. Others will follow as needed and the day seems not far distant when a trans-Atlantic service must be opened. Progress has arrived in Liberia; the past gives way rapidly to the present.
