## STATE AND NATIONAL AUTHORITIES AGREE

Governor Gooding and Forester Gifford Pinchot Find Themselves in Accord on Forest Reserve Question—State Will Receive Valuable Timber Lands in Exchange for School Sections.

There will be no more friction between state and national authorities with respect to the establishment and maintenance of forest reserves in Idaho. Governor Gooding and Forester Gifford Pinchot met on Tuesday last and with no trouble whatever they adjusted all questions upon which they were supposed to have differed but upon which there really existed no difference whatever. By the terms of the agreement reached, the state will be given a solid body of timber land in lieu of school sections 16 and 36 in each of the townships embraced in the forest reserves. These sections were granted to the state by the enabling act. Some of them were valuable, others worthless. The state will now be able to relinquish all of these sections and select good timber land instead, thereby saving not less than \$5,000,000 for the public schools of Idaho. In describing the meeting between Governor Gooding and Mr. Pinchot The Idaho Daily Statesman of September 6 said:

"As a result of a conference yesterday between Governor Gooding and Gifford Pinchot, chief of the forestry service, a perfect understanding has been reached between the state and national governments on the subject of forest reserves. The state government and the forestry service will co-operate hereafter to the fullest extent on all matters pertaining to the protection of the forests and water sheds.

"An important feature of the understanding is with relation to the state's school sections embraced in reserves. After Governor Gooding had set forth the condition in which these school sections are left an agreement was reached that the state should be given a solid body of timber land in exchange for such school lands, this land to be maintained as a state reserve, the proceeds of timber sales from it going into the public school fund.

"Mr. Pinchot explained in detail the scope of the new regulations and also the plans of the service for the future. This was so entirely satisfactory to the governor that he stated there was nothing left he could wish to criticize and he was ready to give his fullest support to the forestry service.

"The conclusions reached were given to The Statesman in the form of what may be designated as a joint interview. The govern-

or made a brief statement as to his position and Mr. Pinchot then stated in detail the scope of their agreement.

### Never Opposed the Principle.

"In making his statement the governor called attention to the fact that he had never been opposed to the principle of forest reserves. He believed the establishment and maintenance of these reserves would be a great thing for the country. He had found, however, that the rules formerly enforced in the management of reserves were often unreasonable and were detrimental to the interests of the people and the state.

"Mr. Pinchot interrupted him while he was speaking on this subject to say that he thoroughly agreed with the governor on that point. The rules and regulations had been very crude, he said. They worked injustice and it had been marvelous to him to observe how patient the people had been in view of the just grievances they could bring forward.

"Continuing, Governor Gooding said he was entirely satisfied after his talk with Mr. Pinchot; he felt entirely different about the matter and was ready to assist in every way that he could in the protection of the forests and water sheds of the state. He found the plans of the service and the new regulations being put into effect were all reasonable and satisfactory in the highest degree, while a most favorable agreement had been reached with reference to sections 16 and 36, common school lands belonging to the state, embraced in reserves.

### Scope of the Agreement.

"The governor asked Mr. Pinchot to state the result of their conference in detail and the latter proceeded to do so, first requesting the governor to check him up if in any respect his statement was not exactly in accord with their understanding.

"Mr. Pinchot said he and the governor had discussed the forest reserve policy of the government and the forest reserves established in this state in all their phases. They found themselves in perfect agreement on all points. At the outset they were in complete accord on all the general principles of the forest reserve system and when they had finished there was no difference of opinion on any point.

"With reference to the matter of school sections embraced in reserves, Mr. Pinchot said it had

been agreed that at the proper time he should arrange to have an exchange made under which the state would secure a solid body of timber land in exchange for such school sections. This could be arranged with the president. It was agreed, he added, that this body of land should be maintained as a state reserve. It should be protected from fire under the excellent law enacted at the last session of the legislature. The timber on it should be sold under effective regulations and the proceeds thereof turned into the public school fund, the land being

left in condition to produce another crop.

### Protection for the Babes.

"The governor and he were entirely agreed, Mr. Pinchot stated, that the schools of the state would be afforded perfect protection in this manner. Further, he said, they were agreed that the grazing interests of the state would be amply protected and that full justice would be done them under the new rules that had been promulgated.

"Mr. Pinchot added that he and the governor were agreed that the subject of agricultural lands in re-

serves was fully and satisfactorily covered by the recommendation made to congress by the public lands commission of which he was a member. That recommendation was that wherever lands were found in reserves more suitable for agricultural purposes the same should be subject to entry under the homestead law, regulation being enforced to ensure such entries being bona fide. Moreover, such lands could be taken up by metes and bounds, enabling settlers to secure arable land without being obliged to take any unsuitable for their purposes. In this connection Mr. Pinchot said the object of the forestry service had been best stated by President Roosevelt when he said the purpose was to bring about the best use of all land. It would be necessary, he continued, to modify the lines of reserves for many years to meet conditions found to exist. The service was aiming to conserve the timber interests but was equally anxious to avoid injury to the state or its people in any particular.

### Warfare Against Fire Flood.

"It had further been agreed between him and the governor, Mr. Pinchot proceeded to say, that the state and the government should co-operate in protecting the state's timber from destruction by fire. A close alliance had been effected touching all matters of common interest with respect to timber matters. He had given instruction to Major Penn to advise all the forestry employees of the state of this policy and that they should be diligent in carrying it out.

"It was explained by Mr. Pinchot that it was the object of the government to leave the management of forest reserve matters so largely as possible in the hands of men on the ground. For this purpose the organization was being changed. There was to be a supervisor of each reserve who would have authority to issue grazing permits, to sell timber and to issue permits for the tree use of timber. The supervisor would report directly to Washington and there would be no loss of time in securing permits or in having any other matter in which a settler might be interested given proper attention.

### System of Inspection.

"Inspectors would be appointed each of whom would have a number of reserves under his jurisdiction. These inspectors would note how the work was being carried on and if they found anything going wrong they could take it up in an advisory way with the local supervisor, but if an irregularity could not be straightened out in that manner they would have to report to Washington, instructions being sent from the office there to the supervisor if it were deemed necessary.

"Another feature of the reorganization is that specialists will be appointed as general inspectors. For instance, Mr. Potter of An-

zona has been appointed inspector. He more, about the country than at the west. An ar has been alter logging in the whole field covered. Mr. summarizing the poses of the se the desire to tence principle ment of these

In selecting in mind the growt we laid our plan man can come to every scrap of mat from a single room of many rooms. and whatever add the way of wood in the mill witho The opening of the ar important addi of Twin Falls. It shrewd businessm vent thousand of d prise because they will furnish the There is no dang

The Twin Falls News double magazine Mergenthaler Linotype.

This new and remarkable machine enables the compositor to change back and forth instantly from one face or font to another. It also enables him, if desired, to run in one line two or more faces. In its general organization, as regards the keyboard, the assembling, casting and distributing mechanisms, the machine is substantially like the standard Linotype. Instead of being provided with a single magazine, as heretofore, it carries two magazines, one overlaying the other, and both controlled from a single keyboard, having the usual arrangement of finger-keys, so that it may be instantly manipulated by any operator familiar with the regular machine.

Each magazine delivers its matrices to a conveyor belt, and the two belts deliver the matrices to the ordinary assembler. Each magazine is provided at the top with an ordinary distributor. The composed line is lifted from the mold to the upper distributor, where the line is disintegrated, and the matrices for the two magazines carried in the usual manner through their respective distributors.

Adjacent to the keyboard there is a special key or lever. When this is raised the keyboard will cause matrices to be delivered from the upper magazine. When a change of face is required the operator has only to push down the lever, the effect of which is to shift the connections so that the keyboard will cause the delivery of matrices from the lower magazine. The change is instantaneous, and the operator may at will com-

or font made by the company.

The two magazines may carry fonts of the same size differing in style, or of the same style differing in size. If desired, a complete font of body faces combined with italics and small caps may be used in the upper magazine and a similar complement of a different size or style used in the lower magazine, or the lower magazine may be equipped with black faces, heading characters, accented characters, symbols, or other special characters.

It is to be noted that the new machine enables the compositor to combine different faces in great variety without loss of time. Chapter heads, sub-heads, titles, marginal notes and numbers, footnotes, extracts and other matters may be included with the body matter without loss of time. When two-letter matrices are employed, the machine carries 360 characters, all represented in the keyboard. Of course, extra or sorts characters, rarely used, may be introduced by hand at will.

The machine is provided with two universally adjustable molds, each adapted for change of measure and body. When the machine is used for faces of different sizes, the two molds may be adjusted accordingly, and one or the other brought into action at an instant. In this manner it becomes possible to set large or small faces at will on bodies of corresponding size. It is also possible in this machine, if the two molds are properly adjusted, to produce slightly different thicknesses of the line.

# Blue Lakes Fruit

## THE FINEST IN THE WORLD

Offered to Twin Falls Citizens at less than half the price it commands elsewhere

In order that the people of Twin Falls may have all the choice, fresh fruit they want at practically the price it cost to grow it and put it on the market, I. B. Perrine of Blue Lakes has arranged to supply the merchants of Twin Falls with the product of his matchless orchard at a figure which will enable them to sell it for less than half of its actual market value.

Commencing Monday, September 11, plums and prunes, worth \$1.10 per crate in any market today, will be sold by Twin Falls merchants at 60 cents. Any large quantity can be purchased at this price if orders are placed ahead. The varieties include the Pond's Seeding or Hungarian, a large red plum; German and Italian prunes; green Gage plums; Petit or French plums, taken from the same trees which supplied the fruit that won the gold medal at the Paris exposition. These plums are preserved without sugar.

Grapes and Apples, which are now ripening, will be sold later in the same way and at correspondingly cheap prices.

ALL FRUIT WILL BE UNLOADED AT J. V. BAKER'S OFFICE. FIRST COME, FIRST SERVED. NO FAVORITISM.

Get in Before the Fruit is all Gone. It is a  
Chance.

## THE FAMOUS JERSEY DAIRY COWS WERE BRED

originally from the Romantic Land of Normandy and were brought to their present state of perfection in the little Isle of Jersey. Their peculiar traits of character.

Great many Twin Falls farmers are talking about purchasing Jersey cows. While other breeds are frequently mentioned, the Jersey is by far the most favored.

For every pound of feed the Jersey cow will return more butter than any other cow, with the possible exception of the Guernsey.

These are worthless Jerseys, the breed as a whole is the best for dairy purposes. The only objection to them is that they require exceptionally kind treatment.

They possess extremely nervous temperaments and when excited they become frantic and unmanageable. All finely bred animals are similarly constituted.

Thousands of men and women are milking the mild-eyed Jerseys seldom stop to ask where a gentle cattle came from. Yet they have a history and a long one.

Normandy in France is a land of peace, which has figured extensively in song and story. Who has not heard the "Chimes of Normandy," the beautiful opera in which is set forth the plaintive

lament of the "Bells," the battle of the boatman, the saucy tale of the gossiping Sepolite, the love-making ballads of Gertrude and the queer doing of old

Gaspard in the depths of the forest. It was in this merry peasants, of moonlight and mystery, that the little Jersey cattle were first known and

Jeanette and Jean-Pierrot Shonshon learned to love for their soft tempers and abundance of milk. It was not long after when the Jersey was imported to England, probably during the

middle of the eighteenth century. At that time they were found in the Channel Isles between Jersey and England, from one of which they derived the name by which they have ever since been known.

An interesting explanation of how the Jersey obtained its priority to "other cattle as a animal. It is attributed to the fact that a few farmers con-

tinued to raise stock of cows of the best-milking breeds, which attention, prosecuted for a long number of years, made the little country like the Isle of Jersey, where such superior quality would soon be known, led to the excellence of Jersey butter yielding property in the race at large. In words it was by careful selection and breeding, which by gradually centered the qualities and transmitted to descendants. This could have been done in any country and thus the breed

coming from Normandy really improved in its Jersey. The Jersey was imported into this country during the last century and was not until a comparatively recent date that they were extensively bred.

With the exception of our dairy interests, we found incomparable for their marked peculiarities in quantity and quality of milk produced from the Jersey of a given quantity of feed. Their diminutive size also is in their favor, especially in cities and towns where a cow and have only a few feet of space for their accom-

modation. The Jersey cow is the best for dairy purposes. The only objection to them is that they require exceptionally kind treatment.

They possess extremely nervous temperaments and when excited they become frantic and unmanageable. All finely bred animals are similarly constituted.

when she allowed the producers of the golden cream to escape to the shores of England and the dairy farms of far distant America.

### READ THIS AND BE CHEERFUL

When a Stranger Complains of the Dust Ask Him Where He is From.

The following is taken from the Weekly Tribune, published at Pullman, Washington, the place from which came many of our most highly esteemed citizens:

"We usually get from one to two heavy dust storms every year, but never before have we had such a dose as was meted to us Sunday night when the fiercest ever swept our streets clean, and distributed the loose real estate inside the dwellings and everywhere it was not wanted. It arrived here, at about 6 p. m. and stayed with us several hours. The air was so filled with dust that buildings across the street were scarcely discernible while daylight lasted. The damage to dust grain must be heavy as it was badly threshed out."

The telephone, telegraph and electric light wires were down in places and trains delayed. What fruit escaped the scorching blast of the drouth was pretty well blown from the trees. One freight car east of town was partly uncovered, a few trees were blown over and the streets were lined with branches from the tall poplars. The storm was general, fiercer in some places than here.

At Moscow two fire alarms were turned in during the storm which are supposed to have been of incendiary origin.

"The 9:15 train from Colfax was delayed nearly two hours by a tree that had been blown across the O. R. & N. track between Elberton and Garfield.

"City Treasurer Clark was a pretty mad man Monday morning when he entered his office in the city hall. He went away Saturday and left his office windows open and you can imagine the condition of the room when he returned. E. S. Burgan & Son were minus one of their awnings and Blackman Bros. will have to purchase a new one."

## RED CLAY FORMATION

ENCOUNTERED IN TWIN FALLS AT DEPTH OF 44 FEET.

A hole in the ground is usually an object of much interest, unless it taps a flow of oil or a rich ledge of mineral bearing rock. There is one shaft in Twin Falls, however, which is attracting a great deal of attention. This is the cesspool which is now being excavated for the Hotel Perrine.

It is the only excavation of any depth which has been made in this section and people are curious to know something about the formation.

Jack Fritz, who has the contract for the work, is now down 44 feet and he intends to go 15 feet further. Bedrock was encountered at a depth of 12 feet. It was loose at first and resembled shale in some respects but it required powder to move it. Beneath the loose formation lay a solid strata of lava rock without a single fissure. From the surface to the bottom of this strata the measurement was 44 feet. Below the lava rock came a layer of soft, red clay, similar to that which crops out in places along the Snake river canyon. This clay yields readily to the pick and hardens on exposure. It has not been assayed or analyzed but many believe it may have a commercial value. It is richly colored and some are of the opinion that it is the basis of what is termed red lava rock which is found in considerable quantities not far from Twin Falls. While Mr. Fritz has not taken out a sufficient quantity of the clay to judge accurately of its character, that which has been brought to the surface appears to be sufficiently pliable to permit of its being molded. Should it prove to be soft enough for molding it might, if obtainable in large quantities, prove extremely valuable for building purposes. As an ornament to stone it should be very useful as it retains its color admirably.

The depth of the red clay formation in which Mr. Fritz is now working can only be conjectured but it seems to be of some extent and his operations are being watched with keen interest.

Public is Assured. The public is assured to a knowledge of the curative merits of that great medicinal tonic, Electric Bitters, for sick stomach, liver and kidneys.

Mary H. Walters, of 546 St. Clair Ave., Columbus, O., writes: "For several months I was given up to die. I had fever and ague, my nerves were wrecked; I could not sleep, and my stomach was so weak from useless doctors' drugs that I could not eat. Soon after beginning to take Electric Bitters I obtained relief, and in a short time I was entirely cured." Guaranteed at Sprague & Butler's drug store, price 50c.

For up-to-date stationery, go to the Bedford drug store.

The President, Albion, Idaho

FREE WE GROW THE BEST

Spokane, Wash., May 13, 1905. HANFORD NURSERIES, OAKDALE, WASH.

Gentlemen: I have just returned from Colville, Stevens county, Wash., where I looked over the 10,000 apple trees purchased from you and planted this spring in my orchard. They are starting nicely and I wish to state that the trees were a splendid lot, bright-looking and healthy, entirely free from insect pests and disease, good rooted, fully matured and well packed. They are the kind of nursery stock it is a pleasure to receive and plant.

Very truly yours, GEORGE S. MORLEY, Secretary and Manager the Colville Orchard Co.

Notice For Publication  
L. B. Farnice of Mine  
County No. 724, under the  
jurisdiction of the 24th  
circuit as the "Carey Act"  
of 1906, under section  
33 of township 34 N., range  
10 E., 2d S., 24th Cir.  
of 17 E. B. M. do hereby  
my intention to claim  
claim my claim  
and the said  
have been  
as required by law, before the  
representative of the State Board of  
at Dallas on Oct. 11, 1917, and  
the following witnesses  
J. C. Sprague and J. C. Sprague, all of

William E. Lewis of Texas, former  
 attorney of Charles Clark, who was  
 arrested under the law, and who  
 the legislature of the State of Texas  
 as the "Cary Act," approved March  
 1905, which enforces the law of the  
 State of Texas, and who is now  
 giving notice of his intention to  
 establish my claim to the land  
 and that I expect to provide  
 the same under the law of the  
 State of Texas, before C. D. Thomas,  
 of the State Land Board, at Austin,  
 on Oct. 9, 1905, by two of the  
 Messrs. F. M. Prothro, of Kimberly, Texas,  
 Messrs. Alfred Hallman and S. D. Bayne,  
 of Palm Bay, Florida.
