

ELECTS OFFICERS AND ADOPTS CONSTITUTION

Organization of Twin Falls Canal Association is Perfected—All Land Owners are Under the Canal Eligible for Membership and Will Be Supplied With Copies of Constitution and By-Laws.

OFFICERS.
 President—H. T. West.
 Vice-President—A. D. McKinlay.
 Treasurer—Frank D. Kimball.
 Board of Directors—H. T. West, A. D. McKinlay, F. D. Kimball, J. H. Angel, J. H. Day, Robert Brown, James McMillan, P. H. Smith, J. W. Voorhes.

The canal system will be turned over to them by the Water company. Copies of the constitution and by-laws of the association will be placed in the hands of every landowner on the tract. An initiation fee of \$1 is required of each member and the annual dues are the same amount, payable in advance.

The scope and purpose of the association are fully set forth in the constitution and by-laws which follow.

Preamble.
 Realizing that many of the interests of the farmer under the Twin Falls canal system are common, and that said interests are such as should be looked after from the standpoint of the entryman, from time to time, during the development of said tract, and the inauguration of the water system of the same, and further realizing that at some future time the entryman of said Twin Falls tract will be called upon to assume control of said water system as successors to what is now the Twin Falls Land and Water Co. and further realizing that by organization our common interests may be best served, and our exact status best determined, and that we can best prepare ourselves for the many duties that may arise, we do hereby adopt the following constitution and by-laws:

CONSTITUTION

Article 1. The name of the association shall be the Twin Falls Canal Association.

Article 2. Any person who may own by purchase, water share, under the Twin Falls canal system, may become a member of this association by signing the constitution, or by directing his name to be subscribed hereto, and paying the regular fee, dues and assessments fixed by laws hereafter adopted.

Article 3. The officers of this association shall consist of a board of directors, which shall constitute a governing board, from which board shall be chosen, by the board itself a president, vice president and treasurer.

The secretary shall be elected by

ANOTHER VICTORY.

The judges of awards at the Lewis and Clark exposition have bestowed upon Don C. Bryan of Twin Falls premier honors for exhibits of wheat and oats in the sack. Mr. Bryan's grain was pronounced superior to any on exhibition and he was awarded two gold medals, one for the wheat and another for the oats. This was a tremendous victory for the Twin Falls tract. The most noted wheat growing sections in the United States were represented at the fair and Twin Falls made the best showing. Mr. Bryan's grain was grown almost within a stone's throw of the city limits. His success proves that Twin Falls cannot be excelled as an agricultural tract.

LAND CONTESTS.

D. B. Pettibone vs. John F. Klemm.
 Maurice B. Osgood vs. A. Van De Graff.
 J. C. Eberhart vs. Robert Olson.
 Frank L. Osborne vs. John Hoopes.
 Leander M. Lucy vs. P. M. Kimberly.

The above contests have been filed with the state land board, the allegation in each case being that the defendant did not comply with the provisions of the Carey act in establishing residences upon his land. A fee of \$10 is required of each contestant and this fee is forfeited if the contest is not sustained. The contests will be taken up by the board and decided at an early date. It was expected that a large number of contests would be filed on October 7 but they did not materialize. It was given out that the state land board would, in the cases of bona fide settlers, give the latter every possible latitude and that technical breaches of the law would not be accepted as the basis of contests.

NEW SCHOOLS OPEN MONDAY.

The seats for the new temporary school buildings arrived today and are now being installed. They will all be in place and ready for the opening of the schools on Monday, October 16. The delay in the arrival of the seats has caused the board of trustees great annoyance. It was impossible to open the new buildings until the seats were available. The primary grades have been taught in the old school building.

Up to date 406 pupils have been enrolled and it is expected that not less than 500 pupils will be in attendance before the end of the present month as many children whose names were on the census roll have not reported yet.

The temporary school buildings will easily accommodate 500 pupils. They will be heated with four large stoves and will be made as comfortable as possible.

WILL WAIT FOR FARMERS

Water will not be cut off in the low line canal on October 15, as announced. Although the company was desirous of completing permanent work upon the low line as soon as possible, so many settlers were engaged in making final proof that it was decided to defer the work until irrigation had ceased for the year. Until there is no further pressing need for water, the canal will not be disturbed. Due notice will be given of the date when the water will be turned off.

CEMENT CISTERNS GIVE THE BEST SATISFACTION

Those Built by Twin Falls Farmers Cost Less Than \$40 Each and Prove Very Serviceable—Are Pronounced Superior to Stone or Brick—How the Cement Cistern is Built.

The building of cisterns is at present occupying the attention of a great many farmers. Some of the settlers have used stone, others have tried brick, but the majority have found that cement makes the best building material. The cost, utility and stability of the cistern have to be considered and the farmers are finding it quite a task to construct one which will meet every requirement. As a sanitary precaution it is necessary that the water should be filtered and the cistern should be so constructed that this may be done easily and effectively.

Two cement cisterns, constructed by C. H. Eldred and Samuel Woodhead on their farms north of the city, are worthy of description because of their economy and stability. These cisterns are 10 feet six inches deep and eight feet in diameter. In form they resemble an inverted balloon. Two coats of sand and cement were laid upon the dry earth of the walls. On top of this two coats of pure cement, about the consistency of cream, were daubed. The result was a wall which, by reason of its conformation, presented no weak spots. The curves of the cisterns, which might be compared to those of a decanter with a short and wide neck, take up the weight of the water most effectively and reduce the danger of breakage to a minimum.

Mr. Woodhead's cistern is filled through a trough, 14 feet long, six inches wide and six inches high. This trough contains fine gravel and it empties into a box, 18 inches square, also filled with fine gravel. From the box a pipe leads into the cistern. The trough and box are so constructed

that they may be quickly and easily cleaned and refilled with gravel. The result is clear, pure water.

In the construction of Mr. Woodhead's cistern, five sacks of cement were used. Including the expense of excavation, the value of the cement and sand, the construction of the trough, box and pipe and all other expenses, the total cost of Mr. Woodhead's cistern was between \$35 and \$40, and he is well pleased with its operation.

Mr. Eldred's cistern, which is built on practically the same lines as that of Mr. Woodhead, cost about the same sum and Mr. Woodhead seems to think it is better than his own. A detailed description of Mr. Eldred's cistern will be published later after the cistern has been thoroughly tested.

Those who have built square cornered cisterns have had all sorts of grief. No matter how carefully a square cornered cistern may be constructed, it is bound to leak. It has also been demonstrated that it is unsafe to leave any space between the cistern walls and the solid earth. Even though earth should be carefully tamped in these spaces, the walls are certain to show weakness.

In other irrigated districts the cement cistern has given the best satisfaction and, judging by the expert opinion of the Twin Falls farmers, it appears to be the most satisfactory for this section.

As every farmer on the tract will have to build a cistern sooner or later, the question is one which deserves close attention. It will doubtless be taken up at the meetings of the farmers' associations.

SOMETHING DOING In Underwear

In Dress Goods

We have a choice line of Fancy Dress Patterns personally selected of the latest fabrics.

MOHAIRS have proven their value and utility in Idaho dust, being easy to clean and neat in appearance. We have just received a stock of exceptionally fine lustrous in browns, grays, tans, etc., excellent values at 75c.

In Suitings

We have just received a choice selection of Arnold Suitings—the most popular and best designs—very fine for school dresses and make fine street costumes, 25c to 35c. ASK TO SEE THEM.

In Millinery

We are making, for One Week Only, a cut of 20 per cent. on all Pattern Hats. Remember, we are exclusive agents for the famous Gage Hats, which describes all that is chic and trim in Millinery. We have a large line of the newest things in Street Hats, Tailored Hats, Children's Hats and the Latest Novelties in Caps. It pays to be dressed so our knows they are in as good style in Idaho as in Paris, and OUR Millinery will produce this effect.

In Ladies' Coats

We are showing the very latest Empire styles, the most beautiful and artistic garments made. Skirts in a variety of styles—all up to date patterns—make and material most appropriate for the climate. All the above goods of the famous Beifeld, Chicago, make being handsomely tailored and of the best workmanship. Children's Coats in a variety of styles. LADIES' COATS, \$8.00 and up. LADIES' SKIRTS, \$3.50 and up. CHILDREN'S COATS, \$3.50 and up. All exceptional values.

In Underwear

In this department we are constantly adding New Goods and are now prepared to furnish the best values in Underwear to be had. All grades of cotton, fleeced and wool in children's, misses' and ladies. We court inspection and offer exceptional values.

Ladies' excellent fleeced Underwear at 30c.

Ladies' fine fleeced Underwear at 50c.

Misses' Union Suits, 40c. Best all-Wool Ladies' Garments, \$2.00.

We are agents for the famous Fitasug' Ladies' Underwear. Ask to see it.

IN LACES

We have just received from New York a handsome assortment of Laces and Fancy Trimmings, including genuine Valenciennes, Torchons, All-Overs and various Persian trimmings, making a very extensive line of Laces and Novelties. A complete and up-to-date stock in this line.

In Vicugna Cloths

We have the most magnificent patterns on the market. Fleece lined goods for Wrappers and Kimonos, the prettiest ever woven. To see these is to buy as there has never before been anything in the market like them—pretty Japanese patterns and most beautiful Persian designs. Fancy Novelties.

In Hose

Our stock of Hose is complete, embracing the latest patterns in fancy black and plain black Hose, all prices, 25c to \$1.00. GOOD BLACK HOSE, 10c. FINE FLEECE-LINED HOSE, 20c. BEST FLEECE LINED HOSE, 50c. MANY OTHER BARGAINS IN THIS DEPARTMENT.

In Outing Flannels

We carry a full line, including double width Outing to be had nowhere else. Many very artistic things in Outings for warm wrappers, jackets and kimonos. An exceptional Outing Set. Other values in proportion. Many beauties in Flannellets.

OUR STOCK INCLUDES THE LATEST NOVELTIES IN LADIES' HAND BAGS—A FINE STOCK OF ALL THE NEW AND PRETTY THINGS IN LADIES' COLLARS (THESE ARE EXCEPTIONALLY FINE) AND A NICE SHOWING OF GOLF GLOVES. WE HAVE ADDED A LINE OF FURS OF GOOD VALUES AND CARRY THE NEW THINGS IN TAPESTRY CURTAINS AND COUCH COVERS. SILK UNDERSKIRTS AND LADIES' UNDERMUSLINS ARE AMONG OUR GOOD-SELLERS.

OUR STOCK IS NEW WITHOUT EXCEPTION—WE BUY NO OLD STOCKS—WE ENDEAVOR TO MAKE OUR STOCK COMPLETE AND KEEP IN TOUCH WITH ALL THE NEW THINGS—ARE HERE TO STAY AND TRY TO PLEASE YOU.

The Best Always TWIN FALLS, IDAHO

TYPHOID FEVER AND ITS SOURCES

PAPER WHICH SHOULD BE READ BY EVERY SETTLER ON THE TWIN FALLS TRACT.

Typhoid Germs Are Making Their Appearance and Prompt Steps Should Be Taken to Check Them—Entomologist L. O. Howard Tells How This May Be Done.

A number of people are suffering from typhoid symptoms. The majority of the cases are mild and in most instances recoveries have been rapid. As there are very few pools of still water on the Twin Falls tract and these pools are of very recent formation, they cannot be considered as sources of infection. Nor are there any mosquitoes in the irrigating ditches as yet—consequently it is the unanimous opinion of local physicians that other causes must be looked for. The boiling of water for domestic use is strongly urged. The Twin Falls trustees are engaged in a careful inspection of the source of the domestic water supply and they have also taken steps to place the city in first class sanitary condition. Proper attention has not been given to closets and their condition is anything but satisfactory. In their haste to build homes many citizens overlooked this important feature.

For the information of the public the News reproduces portions of an admirable paper by L. O. Howard, entomologist of the department of agriculture, which contains much that the people should know in regard to typhoid fever, its sources and the best means of preventing it. Mr. Howard says:

Sources of Typhoid Fever. "Cities well supplied with water from a reservoir, especially a winter reservoir, which possess a modern sewage system, and in which water closets are universal, derive typhoid fever only from the following sources: Contaminated country milk, the return of people in the autumn from the less sanitary country, and lack of care in the disposal of the discharges of persons who have contracted typhoid from either of the first two sources.

"In the country, however, conditions are different. Each country house or each house in a small village has its own water supply, usually in the shape of a well; the cattle get water from the streams; there are no water closets, and excreta are deposited in the open or in box privies; drainage from these box privies or from the open deposits containing virulent typhoid germs may enter the streams, be carried for some distance and be taken into the stomachs of cattle all along the course of the stream, or the germs may be carried by underground drainage directly into the wells from which drinking water is gained; or, exposed as these box privies or open deposits are, certain flies may alight upon the excrement and carry the germs directly to the food supply of the houses or certain flies may breed in this excrement and fly, fairly reeking with disease-bearing filth, to the kitchens and tables of nearby houses. When we consider that active typhoid germs may be given out for some time by persons who have not developed typhoid fever sufficiently so that it may be recognized, and that they may also be given out for some time after patients have been apparently cured of the disease, it is perfectly obvious that in the country the lack of care with which excreta are deposited readily accounts for outbreaks of typhoid fever from any of the causes mentioned.

Methods of Protection. "Of course it will be said that the entire water supply of a city may become contaminated at or immediately above its reservoir supply. This contamination is from country sources and might be obviated either in a general manner by the establishment of a reservoir filtering plant, or in a special manner by individual householders by the constant and thorough use of house filters. In cities possessing a common water supply and modern sanitary plumbing there is no excuse for the presence of typhoid in the household. Even the city water must be filtered, which can be done by the use of any one of the cheap filters now on the market; the milk which is drunk by children must be sterilized, and the excreta of persons returning to the city, after contracting typhoid fever in the country, must be disinfected with the utmost

care. These three measures, systematically followed, will result in the abolition of typhoid fever within the city boundaries.

"So much for cities. In the country the matter is somewhat more difficult and immunity from malaria and typhoid depends largely upon the individual household. Such immunity may be obtained, but only as a result of intelligent care.

"It is not the writer's intention to go further into the causation of this disease than he has already done in his introductory remarks. He wishes, however, to point out as forcibly as possible the danger of its spread by insects and the methods of avoiding this danger.

House Flies and Breeding Places.

"The principal insect agent in this spread is the common house fly, and this insect is especially abundant in country houses in the vicinity of stables in which horses are kept. The reason for this is that the proffered food of the larvae of house flies is horse manure. House flies breed in incredible numbers in a manure pile largely derived from horses. Twelve hundred house flies, and perhaps more, will issue from a pound of horse manure. Ten days completes a generation of house flies in the summer. The number of eggs laid by each female fly averages 120. Thus, under favorable conditions, the offspring of a single overwintering house fly may in the course of a summer reach a figure almost beyond belief. With an uncareful pile of horse manure in the vicinity of a house, therefore, flies are sure to swarm. Their number practically will be limited only by breeding opportunities. They are attracted to, and will lay their eggs in, human excrement. Under favorable conditions they will breed to some extent in this excrement. They swarm in kitchens and dining rooms where food supplies are exposed. They are found commonly in box privies, which sometimes are not distant from the kitchens and dining rooms. Therefore, with an abundance of flies, with a box privy near by, or with excremental deposits in the neighborhood, and with a perhaps unsuspected or not yet fully developed case of typhoid in the immediate neighborhood, there is no reason why, through the agency of contaminated flies alighting upon food supplies, the disease should not be spread to healthy individuals. That it is so spread is not to be questioned. That under the unusual conditions of the army concentration camps in the summer of 1898 it was so spread to a shocking extent has been demonstrated by the army typhoid fever commission. And the remedy is plain. It consists of two courses of procedure: (1) Proper care of these box privies or from the open deposits containing virulent typhoid germs may enter the streams, be carried for some distance and be taken into the stomachs of cattle all along the course of the stream, or the germs may be carried by underground drainage directly into the wells from which drinking water is gained; or, exposed as these box privies or open deposits are, certain flies may alight upon the excrement and carry the germs directly to the food supply of the houses or certain flies may breed in this excrement and fly, fairly reeking with disease-bearing filth, to the kitchens and tables of nearby houses. When we consider that active typhoid germs may be given out for some time by persons who have not developed typhoid fever sufficiently so that it may be recognized, and that they may also be given out for some time after patients have been apparently cured of the disease, it is perfectly obvious that in the country the lack of care with which excreta are deposited readily accounts for outbreaks of typhoid fever from any of the causes mentioned.

Measures to Prevent Typhoid. "On many farms where intelligent people live the old-fashioned box privy has been done away with, and there has been substituted for it some form of earth closet. Where a good earth closet is in operation, and the inhabitants of a farm appreciate the importance of using no other, and where in case of illness the excreta of patients are promptly disinfected, flies breeding in the neighborhood will have practically no opportunity to become contaminated with typhoid germs, except in the unlikely event (which future investigation may possibly show) that other animals than man are subject to this disease. The proper maintenance of an earth closet will add somewhat to the work of a farm, but this extra work will pay in the long run. While it is true that a box inclosure, if its contents are covered with lime every three or four days, will answer the purpose, a much better plan would be to use a large metal vessel, the surface of the contents being covered with earth after each operation, and which may be removed, emptied and replaced daily. Care should, of course, be taken to empty the contents of the vessel into a pit constructed in some well chosen spot, from which the drainage would not be dangerous.

"With regard to the abolition of flies, the best measures will naturally involve some trouble and expense. In a thickly settled country it will become necessary for some such measure to be generally adopted in order to be perfectly effective, but in an isolated farmhouse the number of house flies may be greatly reduced by individual work. All horse manure accumulating in stables or barns should be collected, if not daily, at least once a week, and should be placed in either a pit or vault or in a screened inclosure like a closet at the side or end of the stable. This closet should have an outside door from which horse manure can be shoveled

when it is needed for manuring purposes. Each day's or each week's accumulations, after they are shoveled into the closet or pit, should be sprinkled over the surface with chloride of lime, and a barrel of this substance can conveniently be kept in the closet. If this plan be adopted (and these recommendations are the result of practical experience), house flies will have almost no chance to breed, and their numbers will be so greatly reduced that they will hardly be noticeable. Many experiments have been made in the treatment of manure piles in order to kill the maggots of the house fly, and the chloride of lime treatment has been found to be the cheapest and most effective.

It has been stated above that the closet for the reception of manure should be made tight to prevent the entrance or exit of flies. A window fitted with a wire screen is not desirable, since the corroding chloride fumes will ruin a wire screen in a few days.

Fruit Flies.

"While extended investigations have shown that the common house fly is the fly most to be feared in guarding against typhoid, on account of the fact that over 99 per cent of the flies found in kitchens and dining rooms and attracted to food supplies are house flies, there are a few others which are attracted to and which may breed in human excrement that also have to be guarded against, and these do not breed in horse manure. The treatment just described will not be effective against them. The care of human excrement, however, will prevent the carriage of typhoid germs even by these species. The little fruit flies of the genus Drosophila, which breed in overripe or decaying fruit, are the principal species in this category. Therefore, fruit storehouses or fruit receptacles should be screened, and overripe fruit should not be allowed to remain in dining rooms or kitchens for any length of time.

If you want your furniture moved carefully and quickly place the order with Eickhoff & Hazen.

APPLE TREES FOR TWIN FALLS

J. M. Campbell of Boise Makes Large Purchase for This Section.

J. M. Campbell of the Capital Nursery of Boise has purchased the Keystone nursery stock of the late T. R. Hubbard of Payette, who was widely known throughout southern Idaho, Oregon and Washington as an upright and honorable business man and one who thoroughly understood the culture of trees. Interest attaches to the purchase because of the fact that Mr. Campbell was induced to acquire the stock on account of its prospective value to the people of Twin Falls. Mr. Campbell made two visits to Twin Falls and personally inspected every section of the district. So stupendous did it appear to him that he decided to reach out for additional stock of the right kind to sell to the farmers.

Mr. Campbell concluded that apple and shade trees would be the most desirable to plant on the Twin Falls tract at present, consequently he took steps to secure the best stock of these trees in the state. The business will be carried on at the Keystone nursery, where Mrs. Hubbard, the widow of the deceased nurseryman, will remain. Special attention will be given to commercial orchards. Mr. Campbell has set aside for the Twin Falls tract a choice lot of two year old Jonathan and Rome Beauty apple trees which he firmly believes would do well here. He will remain in Boise at the Capital Nursery for the present and conduct his business by correspondence until such time as he is obliged to come to Twin Falls.

The action of Mr. Campbell, who is one of the showiest and most successful nurserymen in Idaho, in making such a large purchase on account of Twin Falls patronage, shows that this section is attracting a great deal of attention among fruit growers. The nurserymen have discovered that the people of Twin Falls want only the best trees, those which have been tested and found suitable for Idaho. A large number of settlers are preparing to plant commercial orchards, apples being the most favored fruit. It is predicted by those most capable of judging that the Twin Falls tract is destined to become an enormous producer of winter apples. The old orchards on Rock creek under the low hills are growing winter apples equal to the famous Hood river product and there appears to be no reason why equally as good apples cannot be grown lower down in the valley.

INTERESTING TEST OF DAIRY COWS AT FAIR

Holstein from the herd of Dave McMullin of Meridian Makes Best Showing, Producing Nearly Two Pounds of Butter per Day—Jerseys Were Handicapped by Change of Surroundings.

The results of an interesting series of tests of the milk and butter fat producing qualities of dairy cows, conducted at the recent state fair in Boise, have been made public. The cow which yielded the greatest quantity of milk and the most butter fat in six milkings was a Holstein, owned by Dave McMullin of Meridian. A Jersey from the Parma creamery of Kirkpatrick & Hurtt was a close second.

To those who contemplate the purchase of dairy cows, the account of this test should be exceedingly profitable reading. Each cow was milked six times. The milk was weighed and samples taken of the whole amount yielded by each cow. After the milk was separated, tests were made of the skimmed milk and cream and the latter was weighed accurately. The intention was to analyze the butter and buttermilk but owing to the annoying wind and dust this idea was abandoned.

The cows selected for the test were taken at random from the dairy herds on exhibition at the fair. No effort was made to pick out the better cows. Nor were the cows fed anything more than clover and alfalfa, the common fodder of the dairy animal in Idaho. The object in making the tests was to demonstrate what a good dairy cow would do in the way of milk and butter fat production under conditions less favorable than the average.

The prevailing conditions were distinctly unfavorable to the two Jersey cows. These animals were taken from comfortable barns and grain feed at home in Parma and transported by rail to Boise. By reason of their extremely nervous dispositions they naturally gave much less than they would at home. The cold winds and strange surroundings affected them and they did not do nearly so well as they would on the farm to which they belonged.

Cow No. 1 was a fair type of the Jersey breed. She gave 118 pounds of milk in six milkings and her percentage of butter fat was 4.3, a shade higher than that of Holstein No. 4.

the winner of the contest. But what the Holstein lacked in butter fat she more than made up in quantity of milk, giving 131.38 pounds with a butter-fat percentage of 3.9. Jersey No. 2 was a young cow, far advanced in the milk giving period and extremely nervous, so much so in fact that it was with difficulty she was coaxed to let down her milk. Holstein No. 3, which proved to be the third best cow in the test, sustained the reputation of her type for milk production and also yielded a high percentage of butter fat.

The tests surprised those who predicted that while the Holsteins would give more milk than the Jerseys they would fall below the latter in production of butter fat. Previous tests had shown the Jersey to be the better butter-maker and the Holstein to excel in quantity of milk. It is for the latter reason that Holsteins are selected by milkmen and Jerseys by dairymen.

To ascertain the amount of butter it is necessary to add 16 per cent to the amount of butter fat. This increase represents the amount of moisture in the butter. Thus the prize winning Holstein produced a fraction less than two pounds of butter per day. This is not considered an unusual product for a good dairy cow, but it is more than double the amount obtained from the average farm cow. These facts are mentioned in support of the contention that it is much more profitable to feed a good cow than a scrub. Both set the same amount. One returns in the milk half many times the cost of her keep, while the other does not, and their value as beef is practically the same.

The tabulated results of the milking tests at the fair follow.

Cows Nos. 1 and 2 were Jerseys and cows Nos. 3 and 4 were Holsteins:

Cow	Pounds of Milk	Butter Fat Percentage	Butter Fat Pounds
No. 1	118	4.2	4.95
No. 2	57.25	4.07	2.33
No. 3	126.75	3.63	4.64
No. 4	131.38	3.9	5.12

CURRENT WHEEL MADE MAD RUN

BROKE FROM ITS MOORINGS AND STARTED UP THE SNAKE RIVER BUT COULD NOT CLIMB SHOSHONE FALLS.

Strange Story Related by Jake Fritz—Wheel Was Owned by an Old Placer Miner Who Used Two Large Stones to Weight Himself Down While Crossing the Stream.

A group of men sat in chairs on the sidewalk in front of a local hotel the other evening, watching the beautiful sunset and talking about dust storms and current wheels.

"I think a current wheel is a mighty handy thing to have and I propose to put one in my ditch right away," said a late arrival. "They can be used for a variety of purposes and they are not expensive to construct or maintain."

"You are dead right, stranger," answered Jake Fritz, "but you want to put your wheel in right and see that it don't run away from you and smash a headgate."

"Run away and smash a headgate," repeated the stranger. "I fail to see how such a thing could happen."

"Well, I only know of one instance where it did happen," continued Jake, "but that one set us all to thinking. You see there was an old placer miner working on Snake river between Blue Lakes and Anger falls. He had one of those big under-shot wheels about 35 feet in diameter and the way it churned up and hoisted the water was a caution. It was not in boxings so that it could rise and fall with the river. The old man was making good cleanups right along in the spring and things seemed to be coming his way when the river began to swell. You never saw the Snake river when it was real angry, did you? Well, she's a pretty sassy stream. It turned warm all of a sudden in the Tetons and the Snake began to crawl up the banks with a rush. One morning the old miner

woke up and found he had no more current wheel than a jack rabbit. The rising water had lifted the wheel clear out of the boxings and set it free. You may think it strange, sir, but the current was so powerful that it kept the wheel spinning around faster than the movement of the water, just as a sailboat moves faster than the wind which propels it. The wheel kept right on up the river. It got tangled in the ferry cable at Blue Lakes for a few minutes but it soon worked free and scooted on up stream. When it reached Shoshone falls it stopped for a few minutes under the falls and spun around like a buzz saw. Then the power of the water coming from above overcame the strength of the current below and started the wheel down stream. It only went a short distance, when it reversed again and rolled back under the falls. Finally the paddles began to drop off and the wheel fell to pieces. Its loss put the miner out of business.

"That same miner was one of the most resourceful fellows I ever met," continued Jake, lighting a fresh cigar. "He had no use for ferries or row boats. When he had to cross the river he just picked up a couple of rocks, carried one in each hand and walked across on the river bed. The weight of the rocks prevented the current from carrying him away. If you don't believe me, come down to the spot where he mined and I'll show you the two rocks he used."

"Beautiful sunset, isn't it," said the late arrival, and he threw away his cigar butt and went into the hotel.

Lands for Lease.
 Choice agricultural tracts, under the low line canal, 20 to 160 acres in extent, will be leased to desirable tenants on favorable terms. These lands are cleared and cultivated at once. Inlands are owned by farmers in north Idaho, who wish to have them cleared and cultivated at once. Interested tenants will find the terms very advantageous. For particulars inquire of J. M. MAXWELL, Cashier First National Bank, Twin Falls.

It costs money to conduct a lawsuit and the amount which the upper Snake river valley farmers have already spent in litigation would more than suffice to build ample retaining works at the head waters of the stream to maintain an abundant flow of water during the dry seasons.

KIMBERLY FARMERS PROPOUND PUZZLES

Seem to Be Developing Missourian Characteristics and Keep Superintendent McPherson Busy Satisfying Their Desire for Knowledge, Potato Pits and Fences Are Discussed.

Superintendent McPherson was kept on the rack for an hour and 30 minutes at the meeting of the Kimberly Farmers' association on Wednesday. During every minute of that time he was either being asked to answer a question. Among the questions propounded was one in regard to the digging of potatoes. He replied that if the weather was favorable potatoes should not be dug until they began to show the network on the skin. It was desirable that the vines should be killed by frost as that case the potatoes would ripen more quickly. To test a potato in order to ascertain if it was ripe, rub the skin firmly. If the skin peels under pressure the potato was not ripe. Potatoes should not be irrigated any more this year. In the absence of root cellars, the potatoes could be safely preserved in pits. A round hole eight feet in diameter and 18 inches deep, made a good pit. The potatoes should be heaped to as high as they would stand. They should then be covered with corn stalks, straw or other litter and topped with four inches of dirt, care being taken to leave a vent in the center of the pit, sufficiently large to permit the escape of excess heat. As the season advanced, an additional coating of dirt should be added. After the frost came and the covering of earth was frozen, the pit should be covered with manure or other litter to hold the frost which acted as a refrigerator and preserved the potato. In spring the pit should be uncovered gradually.

Mr. McPherson predicted a good demand for potatoes next spring and advised the farmers not to sell their crops at present but to wait for a better market.

Flour Mill Prospects.
Inquiries were made regarding the location of a flour mill on the Twin Falls tract. The superintendent said a mill would be built when sufficient wheat to keep it going was grown and not before. He said the men who wished to build a mill were desirous of finding out how much wheat would be grown on the tract next year and also wished to be informed as to the kind of wheat. There were three things to be considered in the matter of milling wheat, said the superintendent. First, the millers wished to know the protein properties of the grain; second, the color of the flour manufactured, and third, the quantity of grain available. Some wheats, though prolific in yield, were not good for flour. It was suggested that each association on the tract should open a book with its members and find out the number of acres of wheat planted in order that an estimate of the probable yield might be obtained.

Legal Fences.
In response to questions, Mr. McPherson said his understanding of a legal fence was that it should be four feet six inches high, with at least four strands of wire, evenly spaced, the outer strand to be not more than 18 inches from the ground. If the posts are more than a rod apart, stays should be set between them. He condemned barbed wire fences as dangerous and barbarous contrivances which should not be used in civilized communities. The damage done to animals annually in Idaho by barbed wire fences would, if reduced to dollars and cents, go a long way towards building a good fence around every farm in the state. He said it was almost impossible to find a good horse that had not been scarred by barbed wire. In many cases the animals were utterly ruined. Mr. McPherson advised such fences as that used at the terminal farm, which consisted of two strands of plain galvanized wire, top strand four feet six inches from ground and the lower strand four feet below, beneath which was a barbed wire fence. A cheaper rabbit fence could be used if there were no strands of iron wire. In other words, the rabbit fence need not be high nor as expensive as that which surrounded the experimental farm. In a few years, he predicted, rabbits would disappear and barbed wire would no longer be necessary. The superintendent advised farmers to combine wherever

ELECTS OFFICERS AND ADOPTS CONSTITUTION

Continued from First Page.

the board from its own membership. The membership of the association at large or from the outside as the board may see fit; said secretary to be entirely under the control of the board.

Article 4. The board of directors shall constitute a governing board which shall manage the business of the association, control its affairs, provide for such regular and special meetings of the board as they may deem proper, fill all vacancies in office for any unfinished term, and in the fulfillment of its duties, in looking after the affairs of the association and its individual members, shall exercise the same power as fully to intent and purpose as the association in regular session, and not conflict with the by-laws of this association.

Article 5. This constitution may be amended by a two-thirds vote of the members present at any regular or special meeting of the association, providing that 30 days' notice of such

proposed amendment shall have been given to the members by the secretary.

BY-LAWS.

Section 1. The membership fee shall be \$1, payable at the time of signing the constitution.

Sec. 2. The annual dues of members shall be \$1, payable in advance. Neglect to pay dues or other liabilities due the association for more than 30 days after notice has been given shall suspend the delinquent and exclude him from the privileges of the association and in case of delinquency for more than one year, his name shall be dropped and he shall be reinstated only on payment of past dues.

The governing board may levy assessments when in their judgment it becomes necessary, not to exceed \$3 in any one year, except by a majority vote of the association in regular session.

Article II.

Section 1. Any member in good standing is eligible to become an officer in this association.

Sec. 2. The president shall preside at all meetings and shall be ex-officio chairman of the governing board and with the approval of the board or of the association, may appoint all standing and special committees.

Sec. 3. The vice president shall act in the absence of the president, and in the case of the absence of both the president and vice president any member of the board shall be chosen to act temporarily.

Sec. 4. The treasurer shall receive and disburse all funds of the association and shall pay out no money except by an order signed by the president and counter-signed by the secretary. He shall make a monthly report to the board and shall give a bond subject to the approval of the board.

Sec. 5. The secretary shall keep the records and accounts of this association and the official correspondence, collect all dues and other moneys and immediately deposit them in the bank subject to the order of the treasurer and perform such other duties as shall be required of him by the board. He shall present at each meeting a report of the business and doings of the preceding year, and at the termination of his office shall deliver all books, vouchers and other property of the association to his successor in office. He shall give a bond for the faithful performance of his duties, to be approved by the board, and by the approval of the board may appoint clerical assistants. He shall make a detailed financial statement at each monthly meeting of the board, showing all itemized statement of all receipts and disbursements for the previous month.

Sec. 6. (First)—It shall be the duty of the board to file in the office of the secretary a copy of the Carey act, or the acceptance clause by the state of Idaho, and a copy of the contract existing between the state of Idaho and the Twin Falls Land and Water Co., and all other instruments and contracts whatsoever relating to or bearing upon the status of the entryman under the Twin Falls canal system; to construe or cause to be construed all parts of the same as the members both individually or collectively may demand, and assist in the maintenance of all such interest to the best of their ability, but in no case shall the board take cognizance of any individual differences between its members.

(Second)—The governing board shall control the property of the association and manage its affairs.

(Third)—The board shall fix the compensation of the secretary and determine the services that he shall render.

(Fourth)—They shall fill all vacancies in office, and any officer neglecting to attend any board meeting for three successive months, his office may be declared vacant and the fee filled, provided, however, that a two-thirds majority of the board shall be required to fill the vacancies; but five members shall constitute a quorum to transact regular business.

Article III.

Section 1. No salary shall be paid to any member of the board except the secretary.

Sec. 2. After the organization of the governing board the president shall appoint a committee of three to audit all accounts.

Article IV.

Section 1. There shall be a meeting of the governing board on the first Saturday of each month, but the chairman may call a special meeting at his discretion.

Sec. 2. The regular meeting of the association shall be on the first Saturday in October of each year.

Sec. 3. The nine directors who constitute the governing board shall be elected at the regular annual meeting by vote of the members present and shall hold office for one year, or until their successors are elected and qualified.

Sec. 4. Special meetings of the association may be called by the president when requested by the governing board or upon the written request of 15 members of the association.

Sec. 5. Due notice of all special meetings shall be given at least one week in advance, and notice shall state the object of the meeting.

Sec. 6. The order of business at all regular meetings shall be as follows:

1. Call to order.
2. Reading of minutes of last meeting.
3. Communications.
4. Reports of officers.
5. Reports of standing committees.
6. Report of governing board.
7. Unfinished business.
8. New business.
9. Elections.
10. Installation.
11. Adjournment.

Amendment Clause.

These by-laws may be amended by a two-thirds majority vote of the members present at any regular meeting.

"Whatever's Right"

BREVITIES

Mrs. J. V. Baker is on her way home from Portland and La Grande, Ore., where she visited for several weeks.

Mr. Vanderboard has gone to Sunnyside, Ore., for his family. They will reside on his ranch in section 2 of this township.

Joseph Gibson has returned from Dayton, Wash. He reports that quite a number from that section intend to come to Twin Falls before long.

Rev. E. D. Osterhout of the Methodist Episcopal church will preach in the school house at Kimberly on Sunday afternoon at 3 o'clock.

Regular services will be held in the O. O. F. hall on Sunday at 11 a. m. and 8 p. m. by Rev. E. D. Osterhout of the Methodist church. All are welcome.

Charles M. Hill of the firm of Hill & Taylor has been chosen secretary of the Twin Falls Commercial club. The next meeting of the club will be held on Tuesday evening, October 14, in the old school building at 8 p. m.

Church services will be held in the old school house on Sunday at 11 a. m. and 7:30 p. m. Rev. W. A. Moore, pastor of the First Christian church of Tacoma, Wash., will occupy the pulpit in the morning and Evangelist L. F. Stephens will preach in the evening. Special music will be rendered at both services and a cordial invitation to attend is extended to all.

J. A. Walters has resigned the position of city marshal and has been succeeded by Former Sheriff Dyer of Kootenai county. Mr. Dyer served his county as sheriff for two terms and bears the reputation of being an ideal officer. Mr. Walters was obliged to return to his old home in Hope on account of the health of Mrs. Walters.

C. D. Thomas, who recently purchased the southeast quarter of section 11, township 10 north, range 17 east, from Donald J. Jones, of Houston, Tex., is building on his farm one of the best homes on the tract. He considers the land sufficiently valuable to support a good house and is preparing to make himself comfortable.

Many people are in the habit of talking short cuts through the park and walking over the grass. As the grass is well protected with walks, there is no reason why the grass should be trampled and it is requested that pedestrians use the walks and avoid destroying the grass. The Twin Falls Waterworks company is engaged in putting down six-inch pipe between the tank and the avenue. The contract was awarded to standpipe with a capacity of 65,000 gallons which will furnish good fire pressure all over the city when the new mains are all down. The new standpipe should be in operation in about three months. Electric power will be used in pumping the water.

George F. Sprague of Twin Falls and Miss Anna R. Robertson of Chester, Va., were married in the latter city on the evening of October 11. They will start for Twin Falls a month before returning to Twin Falls and Mrs. Sprague were the recipients of many wedding presents and congratulatory messages from their friends in this city. They will reside at the Hotel Perrine until their home is completed.

John H. Burpin, a well known Boise attorney, visited in Twin Falls on Wednesday with his brother, O. H. Barber, editor of the Times. It is Mr. Barber's first visit to this city and he was astonished with its progress. He said it had all the earmarks of a five town and he believed it would double in population in less than one year.

A. H. Kellogg is in Oregon assisting Dairy Commissioner J. W. Bailey with the purchase of a carload of dairy cows for Twin Falls. The dairyman, whose name is withheld for the present, furnished the cash for the purchase of the animals in order to give the farmers a chance to select the best dairy cows will be selected. The car will be brought to Twin Falls, where the cows will be on exhibition for a time. They will be experienced dairyman and he may be relied upon to make judicious selection. Commissioner Bailey knows where the good cows are to be found and he will render Mr. Kellogg every assistance in his power.

Addison T. Smith has been called to Washington, D. C., by a telegram announcing that one of his sons is ill of typhoid fever.

The Twin Falls bowling alley and billiard hall has been moved from the Gibson building to the premises formerly occupied by the Grifth Hardware company.

John E. Hayes, the well known civil engineer, has announced his intention of returning to Twin Falls shortly to remain. Mr. Hayes has been at Bunley since early spring. He is still loyal to Twin Falls and will make this city his home.

Mrs. Truman O. Boyd returned on Tuesday from the east, where she had visited for several weeks. Although she had a delightful trip, there were times she regretted when a little dust storm would have been very welcome after all she had seen. Boyd, there was no place like Twin Falls.

During the blow last Saturday afternoon the wind tilted the new Christian church out of line. The building was in course of construction and had not been braced for such a storm. Evangelist Stephens and Mr. Brunk soon straightened it out and it will be completed on schedule time.

Miss Anna Hendricks, who was stricken with typhoid pneumonia a few days ago, died this afternoon. Careful nursing and skilled medical attention failed to break the pneumonia, which fastened upon her lungs with fatal grasp. Miss Hendricks was one of the best known and most popular young women in the city. Her parents live near Kimberly.

Assistant General Manager M. M. Murtuga and Agricultural Superintendent McPherson of the Twin Falls Land & Water company have moved their offices into the company's building on Main street, south, where Secretary De Long formerly had his headquarters. As they have a good stove and are not charging any additional fee, their offices are very popular.

Mr. and Mrs. D. W. Peoples have arrived from Warden, Idaho, and are now residing on their farm near Twin Falls. Mr. Peoples, who is a well-known mining man in the Coeur d'Alenes, visited Twin Falls last February and saw at a glance that this was destined to become one of the garden spots of the west. He already has 70 acres of land under cultivation and although he was unable to get water last June he managed to raise a good crop. Mr. Peoples came to stay and Twin Falls cannot have too many of his kind of settlers.

VISITORS IN AND OUT OF HANSEN

WAVE OF IMPROVEMENT STILL SWEEPS THAT DISTRICT.

Settlers Arriving on Almpet, Every Train and All of Them Appar to Be Full of Business—Number of School Children Increasing.

HANSEN, Oct. 12.—William Baker and family returned this week from a visit in Warden, Idaho.

Bert Jensen and family returned from Twin Falls this week.

Mrs. Clara Wilcox was a caller in Hansen on Wednesday last.

Mrs. Mary Rice returned last week from a visit in California.

Attorney P. W. Sweeney spent Monday and Tuesday of this week in Twin Falls.

Mr. and Mrs. C. O. Morrell were visitors in Twin Falls last Saturday.

The family of W. R. Smith arrived this week from Topeka, Kan.

A number of new people have lately been added to the list of enrollment in the Hansen school.

Elmer Kellough arrived last Thursday in Twin Falls, where Harry Kolb, of this place.

Walter Kennedy left Monday for his home in Tenexa, Kan., where he will remain during the winter, returning in the spring to cultivate and improve his ranch here.

Joseph Gibson returned last week from Washington, where he went early in the summer. Mr. Gibson was very much surprised to find so great an improvement in this country during the few months of his absence, and he now the Twin Falls tract is the home for him.

Among the newcomers this week are A. D. P. Keith and family from Pullman, Wash., and B. E. Rose and family.

J. C. Jones and family arrived last week from Marlow, S. D. Mr. Jones shipped in a supply of household goods and farming implements and has come to make his ranch north of here his home.

A great majority of farmers in this district are buying trees and making preparations for planting orchards. Mr. Monce, a Boise valley nurseryman, who has been in this section this week, has supplied a large number of the farmers. N. H. Smith, an extensive landowner south of here, is preparing to utilize 200 acres for planting an orchard of apples.

Dr. H. H. Hartley, having made his final proof, left Monday with his family for Goldendale, Wash. They will return in the spring.

Full of Tragic Meaning

Are those lines from J. H. Simmons of Casey, Ia. Think what might have resulted from his terrible cough if he had not taken the medicine about which he writes: "I had a fearful cough that disturbed my night's rest. I tried everything, but nothing would relieve it, until I took Dr. King's New Discovery for Consumption, Coughs and Colds, which completely cured me." Instantly relieves and permanently cures all throat and lung diseases; prevents grip and pneumonia. At Sprague & Butler's, druggists; guaranteed; 50c and \$1.00. Trial bottle free.

For Exchange.

Twenty-acre orchard in full bearing or eighty-acre tract of sage brush land with full water right, both in Payette valley, for land or town lots at Twin Falls. Address P. O. box 874, Boise, Idaho.

Ditch Surveying a Specialty.

Charles H. Mull makes specialty of ditch surveying. He knows the ground and guarantees satisfaction. Office in Jones building, Twin Falls.

Don't forget that Mrs. Brunk is disposing of millinery at half price. Tenth street, in rear of Pearl Market.

No need of fretting over getting your friends in from the farm when Eickhoff & Hazen will attend to it and do it properly.

Buy or sell anything for spot cash.

Fate's second hand store, East Main street.

Nothing is too heavy or too light for Eickhoff & Hazen to handle in their big transfer wagons. Give them a trial and satisfy yourself.

Hill & Taylor have a number of hives from the east who are looking for good land. If you want to sell, list with them.

SOLE DISTRIBUTORS

FARM AND RANCH PROPERTIES.

1. 160 acres, unimproved, good water right, 2 1/2 miles from postoffice, 1/2 mile from school. A very desirable and smooth piece of land. Easy terms for all or any part.

2. 20-acre orchard in full bearing. Good winter apples, choice prunes, etc. 12 acres Jonathan apples. Land all wooded. Adjoining town of New Plymouth, Idaho. Good water right, good schools, churches and an ideal place to live.

3. 160 acres all under high state of cultivation. Large house, plenty of outbuildings; 20 acres in good blue grass pasture, balance in timothy and clover hay. Ideal location for raising sugar beets as it is within 1/4 mile of railroad switch. Good water right with 150 per cent annual maintenance. School adjoining land. Church 2 1/2 miles. Only 1/2 mile from state capital. Rural free delivery and telephone. Will sell on easy terms or trade all or any portion for other property.

4. 600 acres situated in the fertile Red River valley in Richland county, North Dakota. Land is all under cultivation; good well; six room house, good as new; good stable and outbuildings; complete set of farming implements; eight work horses; in fact a complete outfit for operating a farm. Over 13,000 bushels of grain raised last season. Entire tract seeded this season to grain. The owner of this property will either sell on reasonable terms or exchange for land or livestock.

5. 320 acres. All under fence. 150 acres in alfalfa; 100 acres in grain. New five room house. Well, stable, granary and shop. Altitude 4200 feet. Two miles from railroad station and postoffice. This ranch is ideally situated for a stock or sheep ranch owing to the exceptionally good free range commencing at the ranch fence and extending many miles, changes with which they can be raised and the excellent shipping facilities. Easy terms. \$12,000.00.

6. Stock ranch consisting of 1900 acres five miles from good railroad shipping point. 1500 acres under fence, in all about 10 miles of fencing consisting mostly of three wire. Good water right and short private ditch. About 300 acres are in alfalfa, produced 1400 tons last year. Buildings consist of house for foreman and family and large dining room for accommodation of help. Bank house for men. Large, commodious; eight room house with necessary closets for owner. Large barn, granary and tool house. Blacksmith shop, ice house, milk house, corral and sheds for accommodating a great many cattle or sheep. There is all the equipment of stock and tools. Best of free exchange and all conditions ideal for the cattle, horse or sheep business. Easy terms to the right party.

HOW TO PLANT AND CARE FOR ORCHARDS

WHAT VARIETIES OF FRUIT WILL GROW IN TWIN FALLS?

Filer Farmers Informed as to the Varieties of Apples, Pears and Berries They Are Likely to Find the Most Profitable.

The subject of discussion at the meeting of the Filer Farmers' association on Tuesday evening was the orchard, both commercial and farm, the most suitable trees and shrubbery to plant and how to care for them. There was a vast difference between a farm orchard and a commercial orchard, explained Superintendent McPherson. In a commercial orchard a yearly crop was necessary to bring in returns. In a family orchard, as the trees were not planted for profit, their occasional failure to bear would not be noticed. If the fruit held off every year as long as it had this season, almost all kinds of deciduous fruits could be grown on the Twin Falls tract if they were properly cared for. In the case of a commercial orchard only a few varieties of trees should be planted and these varieties should be selected because of their peculiar adaptability to this section and their marketable value.

The superintendent recommended the Rome Beauty, Jonathan, Water Banana and Yellow Newington apples as four of the best paying varieties to plant in this section. These apples had been grown successfully elsewhere in Idaho, he said, and had proven very profitable.

Bartlett, Bourne d'Anjou and Du Commerce pears were recommended as hardy and paying varieties.

Blackberries, dewberries, raspberries, gooseberries, logan berries and currants were recommended. The superintendent advised the farmers to keep their orchards and berry patches separated. Apple trees should be set 25 to 30 feet apart, pears 25 foot berries, excepting dewberries, six feet each way. The planting of good strong seedling trees was advocated. Two year olds would do, said the superintendent, but yearlings were preferable. Spring planting was best in this climate, he stated.

The rug owned by Mrs. J. H. Angol, which won first prize at the state fair, was exhibited at the meeting.

Don't Make Mistakes on School Books.

We have the right ones.

CHANCE FOR PLOURING MILL

W. Voltz of Palouse, Washington, is Looking for a Site.

W. Voltz from Palouse, Wash., has been in Nampa this week looking for a location for a flouring mill. He is interviewing our business men and farmers as to the situation and expresses himself as being quite pleased with the condition of things here. He expects to visit Twin Falls and the section of the country before making a definite decision.—Nampa Leader Herald.

Play Safe.

Have your land surveyed and your ditches located by C. H. Mull, Jones building, Twin Falls.

For prompt and efficient truck work try Eickhoff and Hazen.

For up-to-date stationery, go to Bedford drug store.

This ranch is ideally located for a stock or sheep farm owing to the exceptionally good free range commencing at the ranch fence and extending many miles. Stock can be raised cheaply and the shipping facilities are unexcelled. Price \$12,000. Easy terms. Address P. O. box 874, Boise, Idaho.

BURLEY OPERA HOUSE OPENING

Will Take Place on the Evening of Friday, October 20.

The Burley opera house will be formally opened on Friday evening, October 20, with a good old-fashioned dance to which every citizen of Cassia county is invited. In making preparations for the opening, those in charge of the event concentrated their energies on two features—good music and a good supper.

The program will contain dances old and new, and every guest will be sure to find something suitable. The best orchestra obtainable has been engaged by the management and music of the car tickling and feet rattling kind is assured. The floor in the Burley opera house is easily the best in southern Idaho, if not in the entire state. No better floors are laid. It is likely that excursion trains from Twin Falls and Minidoka will be put on for the occasion and a regular time is expected.
