APPALLING TALE OF CHILD BEATING

Man and Wife Given Jail Sentence for Deeds

THREE-YEAR-OLD CHILD SHOOTS AWAY—DIPHESE. COMPLAINTS OF NEIGHBORS BRING TWO COURTS TO JUSTICE IN THE PROBABLE CASE.

Two cases of brutal treatment of children were tried in the probate court this week before Judge Shank and resulted in the conviction of George Rider and his wife, who are confined in the county jail. The trial of Rider began Tuesday before a jury and he was brought out by three or four witnesses that while saying a ball to Della Brice, used about two and one-half inches of lead...

...in trip, unless kept pure or other...
 ...in days gone by such a thing...
 ...in that kind of land that cross-bred sheep...
 ...in more to thrive better than in...

ALL the crosses above named are good in their way, but the surrounding circumstances and the chief object to be aimed at, whether fat lamb, mutton or wool or all combined, must be the factors in deciding which is best.

MOLASSES GOOD HORSE FEED
 Product of More Value as Laxative and Appetizer Than as Food - Value as a Conditioner.

Molasses in horse feeding is valuable in two ways. It is a favorite when horses are being fed wholly on the feed. Molasses will make unpalatable food much relished, says Farmers Digest. Every farmer realizes that he may have some very fine hay lying in the swath, or even get a light wintering from a shower when faced up to the window.

This hay contains just the same nutrition and digestibility as it did before the slight wetting, yet the horse will not relish it so he will the same hay that was put in the barn before it got wet. It simply is not as palatable. Now if a little of molasses is mixed with about a pint of water and the horse will eat it with relish. Then he will the same hay put in the barn before getting wet.

The feeding of molasses is of more value as a laxative and appetizer than for any horse feeding. It can be fed either on the roughage or used in suitable on either grain or meal. Horses will eat it if stirred in meal or whole grain, but it usually is fed in their mouths if not mixed with water.

Molasses is also fed in larger quantities than mentioned when horses are being fattened for market and are ill. But I don't advise this kind of practice. It makes a soft fat and the horse who put to work, look loose his flesh, but in a limited way, along the lines mentioned, it is a valuable horse conditioner, as a lot of horses become constipated on whinny, dry food.

Advantageous Houses.
 Many hog houses are built so that to distribute the bugs over the farm in clean, fresh quarters, thereby utilizing areas and forcing crops to the highest degree and at the same time reducing the danger of disease to a minimum.

...in that kind of land that cross-bred sheep...
 ...in more to thrive better than in...
 ...in that kind of land that cross-bred sheep...
 ...in more to thrive better than in...

There are two ways in which the engineer may avoid half of the information necessary to a proper selection of road material. The first and only certain one is to make an actual service test on the material under observation and under the same conditions of traffic and climate to which the proposed road will be subjected. This method, however, is impractical except in certain rare instances. The second method is by means of short time laboratory tests, to approximate as nearly as possible the destructive agencies to which the material will be subjected on the road, by means of the knowledge thus gained by a study of the results already obtained in practice on material of similar nature.

The effect of public roads constantly uses both methods. At Chevy Chase, near Washington, D. C., a model road has been built in sections made of different materials, which in the laboratory of the Federal engineers, are constantly being made with scientific accuracy, to determine the exact value of certain materials under certain traffic conditions.

LIVE STOCK

PRODUCTION OF FAT LAMBS

Flock Masters Are Not Slow in Finding Out What Breed Suits Their Soil and Climate.

By H. W. WATKINSON

The Shropshire is much in favor as a sire for fat lamb production of Welsh or Kerry Hill ewes, and the hybrid also claims plenty of men under in this respect.

Where a flock is kept solely for the fat lamb trade, and the ewes are cleared out every year, no room for the lambs are off, then the Welsh, Kerry or Shropshire is generally preferred over Westerns. The latter are much used and their lambs lead very quickly to market.

Wool growers, as a rule, are not long in finding out what breed suits their soil and climate best, and in sheep-breeding both are very important factors and therefore an individual heavy and quality flock be to some extent classified for it.

Small, natural, long-boned sheep will not thrive when folded on sticky land when a big weight of dirt is hanging

MILKING COWS BY MACHINES
New York Station - Announces Result
of Experiment - Extending Over
4 1/2 Period of Four Years
The problem of milking by means
of machines is still a long way from
being solved. But we are much nearer the
goal than five years ago, or even a
year ago. More people are thinking
about mechanical devices for lightening
the work of tired hands and achieving
results than ever before.

LIVE STOCK MAKES SHOWING

Increase in Number and Value for Idaho's Cattle and Hogs

Idaho live stock at the first of the year, according to estimates made by the bureau of statistics in cooperation with the weather bureau of the United States department of agriculture is worth in round numbers \$29,200,000. This is an increase of 12,000,000 over the value of last year.

The largest increase in number and price is found in the item of cattle other than milch cows. Of these animals there are now in the state 1,144,276, an increase of 14,000 over the total in 1933.

Swine have increased in numbers 29,000, now numbering 252,740, and the price of the animal has risen to \$10.79. The value of the swine in the state is estimated now at \$2,696,000.

There are 102,000 more milch cows in the state than there were at this time last year and the price has risen during the year to \$24.14, or \$10.40, 100,000 more than there were in the number 112,000. Cattle worth more than a horse with a decrease of \$1 in the price of the horse of \$24.14.

More than the average, "A significant feature of the report is the fact that while the total value there has been an increase in the number of cattle, sheep and swine there has been a decrease in the total number in the Great States. This is due to the fact that the distinct gain in price which has tended to keep up the total value to the amount of \$29,200,000.

Prices of Idaho are higher, too, than the average over the country in every instance except in the case of sheep, which are lower there or of great a difference the other way.

THREE ARRESTS MADE

Nampa Bank Officials Must Answer Charge in Failure of Institution.

Nampa, Feb. 23. Three arrests have been made as result of the closing of the bank of Nampa. Following the arrest of J. A. Glynn, former vice president of the institution, the other two of the directors, were placed under arrest yesterday afternoon and today morning received of the arrest of two American city, in the north side of the institution...

The bond and two children...

CROP ROTATION LESS WATER

Idaho Land More Productive With Minimum of Water.

ACTUAL RESULTS OF INVESTIGATION OF DUTY OF WATER.

By Don H. Bark, Irrigation Engineer In Charge of United States Irrigation.

It has long been known that a much greater yield of grain and other crops could be made on fertile soil, such as alfalfa soil, than could be made upon raw arid soils that had never been fertilized in any way.

The duty of water investigation, which has been carried on through Idaho during the past four years by the United States Irrigation engineering department in cooperation with the state land board, has thrown much new light upon this subject.

Test on Blue Stem Wheat. Blue stem wheat on new soil that had never been previously cropped or fertilized produced 2323 pounds of grain per acre with an application of 1.2 acre-feet of the Gooding experiment station during the season of 1932, while the same wheat on the same ground during the season of 1931 produced but 2323 pounds of grain per acre with an application of 1.3 acre-feet per acre.

Big Four oats produced 3233 pounds of grain, or slightly over 100 bushels, during the season of 1932 on managed Idaho soil, having been irrigated with 1.25 acre-feet of irrigation water per acre; while the same oats the following year, that of 1931, produced only 2129 bushels per acre with 2.75 feet in depth in irrigation water on a field less than 100 yards from the river and with no irrigation, but which had grown three grain crops in succession, since the ground had been grubbed, with alfalfa in between.

California feed barley, during the season of 1932 on the Gooding experiment station, produced 4320 pounds of grain per acre with a water application of 1.5 acre-feet on alfalfa soil, while the adjoining acre during 1931 produced only 1075 pounds of grain per acre with a water application of 2.75 acre-feet, the lower yield having grown grain three successive years on the same ground since the acreage had been grubbed.

It is the fact that the irrigation water on fertile soils, and the fertile soils, or those derived in alfalfa soil, has been found to be trace throughout the entire state. The lowest yield of grain from alfalfa soil in 1932 produced 67 bushels per acre with a water application of 1.3 acre-feet, while the adjoining acre, which was almost entirely the same soil, but for 1932 produced but 2 bushels per acre in depth. The latter soil, however, had been cropped for three consecutive years to what without fertilization on kind.

Dicklow spring wheat bear Kintner during the season of 1932 produced 42 bushels per acre with a water application of 1.25 acre-feet, while the adjoining acre, which had been cropped for three consecutive years to what without fertilization on kind, produced only 2 bushels per acre with a water application of 2.75 acre-feet.

Value of Crop Rotation. Many illustrations showing the same tendency might be given, but this is considered unnecessary, for it has been conclusively proven that fertile soils will not only produce from twice to three times as much grain as the maximum crop will from 20 to 25 percent of the irrigation water that is available in the arid lands of the United States. This should impress upon all farmers and particularly irrigation farmers the value of crop rotation and the importance of maintaining their soils in a high state of fertility.

LOST-RIVER SALE

Will be held in Hallow, Monday, February 26th.

Hallow, Feb. 2. The last stage of the river project will be held in the region of Hallow, February 26th, the day after tomorrow. It is believed that there will be an above average turnout for the day. The construction company is expected to have the property in two weeks. No agreement has been reached between the construction company and the bondholders, so far as it is possible to ascertain, and it is not likely that the latter will make any attempt to secure the property.

BOOTH'S CORSET SPECIAL

Postmaster General Submits Report for Government Ownership.

Washington, Jan. 31.—Postmaster General Harrison today submitted to the senate the recommendation of the departmental committee appointed by him to investigate the practicability of government ownership of telephone and telegraph lines. The report charged the only way to afford to the people a complete postal service that the construction of the government's duty to provide is by carrying out these suggestions.

At the Methodist church, Friday evening, Feb. 23, shall we not have the pleasure of seeing you? Help us to make this occasion a happy one. Interesting, musical, and literary program. Now please be on hand without fail.

The Sitstraight Sewing Machine

The Standard Central Needle Sewing Machine permitting the user to make a natural and perfect button, making it truly the all-right sewing machine. The importance of this feature at once impressed itself upon the prominent physicians of the country.

They have had many cases where it was necessary to forbid the use of sewing machines because of the effect upon the user's health. Physicians everywhere endorse the Standard Central Needle Sewing Machine.

LOGAN PIANO CO.

211 Shawnee St. South Twin Falls, Idaho

telephone service as may not be acquired by the government. Statistics Information.

The report is accompanied by statistical information collected after one of the most exhaustive investigations undertaken by the post office department. The report states the United States is the only leading nation which has left to private enterprise the ownership and operation of telegraph and telephone facilities, that practically all of the most important postal facilities and telegraph facilities should be controlled by the government. The capitalization of the long distance toll lines represents approximately \$200,000,000 and the capitalization of the entire commercial network is approximately \$900,000,000. The cost to the government would be less than the present value since the government would not have to buy the real estate as the offices could be located in the best office buildings. Capital Investment.

The TIME LOCK

By Charles Edmonds Walk

Author of "The Silver Blade," "The Palmist's Ruby," Etc.

Copyright 1919
A. C. CLARK & CO.

SYNOPSIS.

CHAPTER I.—Bobbin Van Vechten, a young man of "high" antecedents and "low" morals, is found in the possession of the "time lock," a device which enables him to enter the House of Representatives at will.

CHAPTER II.—Several persons at regular intervals enter No. 1419.

CHAPTER III.—Van Vechten expresses his indignation at the conduct of his constituents and decides to enter the House of Representatives at will.

CHAPTER IV.—Van Vechten is attracted by the face of a girl in the crowd outside the lobby.

CHAPTER V.—Dorette Flint calls Van Vechten to get the version of the "time lock."

He knew dimly later, that she must have been slender and not very tall, for she was standing in the paved alley, on the crowd's outward edge, and it was only an accident of relative positions that afforded her an unintercepted view.

What terrible, gripping horror was it that seemed to be paralyzing all her faculties? What did this man's death signify to her more than it did to anyone else present?

To one such as Van Vechten, accustomed to reading the all but imperceptible indices of schooled feeling, this vision was also a naked human soul.

And now, he discovered suddenly, that he was not the only person interested in the agitated girl. His attention was somehow drawn to a man standing half dozen or so feet from a tall, rawboned fellow with a powerful frame and a stilted cast of countenance.

This man was staring angrily at the girl. He too seemed to be oblivious of the dead man, and intent only upon catching her eye.

Then the cautioning glance was a sudden accounted for; the man, satisfied that he had managed the matter, looked that he had fled.

However, Van Vechten's puzzlement over this strange bit of play, his onerous admiration of the girl's beauty, was broken rudely by a sudden confused movement of the crowd.

With changing bells and a noisy clatter of iron-shod hoofs upon the asphalt, a police ambulance drew up at the curb.

Van Vechten saw, hazily, the young physician indicate the mark on the man's temple, and lay the tip of a finger upon another spot behind the left ear.

It was with something of a shock that he realized she was no longer confronting him. His glance flew quickly to the ambulance, hoping to find the sandy-haired man, as a sort of clue, but she was nowhere to be seen.

The ambulance was now departing, and he was again engaged in dissolving or breaking up into little groups to discuss the tragedy, and the

two friends were walking at a leisurely pace back to the Bowditch. Once more to themselves, and Tom Phinney's volatility returned.

"Why the dickens didn't you want to tell him what you know?" he demanded.

"That question was uttered softly. 'Tom, whatever reasons I may have I couldn't put into words. At least, I didn't attempt to do so.' You surely didn't expect that 'honor' by your scheme of mine seems largely to be governed by them."

"That!" granted Tom, without understanding, but involuntarily hitting up the forehead with his hand in a gesture of reference.

"It is the velvet lady in the tail; you think you're on the scent of an adventure. Hats! No adventure there. She was a lady. I can tell you that."

The other gave him a sidelong glance, as if estimating the degree of his sympathy. How much could Tom tell?

"Tom," after a moment, "if you must talk—and I know your limitations—confer with your intentions—promise me that you will mention the lady in the tail to any body."

Van Vechten's manner was so deliberate and even that Tom favored him with a questioning stare.

"Why, sure, buddy," was the prompt and hearty response—"if it's as serious as all that. You know her—what?"

"I don't think that I should—well, I don't—different thing."

He knew that one phase of the morning's happenings would not be too much for Tom to keep to himself, and for some unexplained reason Van Vechten wanted it to be the mysterious lady of the taxicab.

As they were turning into the Paymaster's granite driveway, Van Vechten bent an inquisitive glance toward Number 1313. His curiosity was now necessarily augmented by a fresh interest.

And he received another sharp look that fairly stung him.

For the first time in all the months that he had surveyed the street facade, he caught a peering eye at the window.

It was not this circumstance alone that stirred him. She was gazing directly at him with a look that both directly arrested and fascinated.

In this new ming the face was even more beautiful than he had dared hope for—why should she be withering him with a look of contemptuous disdain and rebuke? He had never in all his life seen her face before this day.

He was actually stung to an involuntary expression of protest.

"My God! Don't—don't look at me like that."

"By what?" Tom jerked out, swinging around and following Van Vechten's set gaze.

But the blinds were again closed.

"You need a cocktail," Tom commented in a casual manner. "Think of not going to bed at night so as to be up before noon, but get you to seeing things."

learn more of LONG Island, and a comfortable sailing-yacht which Tom Phinney delighted to navigate up and down the sound, while the other dined, made merry or took advantage of the cool breeze to sleep. As everyone knew, he must forego Tom's cheerful habit of every now and then poking his head in at the cabin skylight and shouting directions to the bridge party below—who, as everyone knew, always enjoy that sort of thing. He would invariably vanish before the only available mistle could annihilate him, and become immersed in some profundity of his self-imposed duties.

And then would have followed a journey in his own trim steam-yacht ("Phinney, master), down to the Chesapeake to wait for the returning brigas of ducks: this coast's prospective arrival from abroad had altered all these program arrangements.

Palge Caruch had completed her musical studies in Italy, and was now waiting to catch the world—or at least that elect portion of it which she would condescend to favor—with her violin; her career at the conservatory assured this prophecy. Was not that honor and glory enough for a girl not yet twenty?

Then why should she and Mrs. Dorette go off to London for the season, instead of coming home to meet the people with whom she was wont to mingle after they were married, and receive their congratulations and congratulations?

Van Vechten pondered at this reflection. After they were married! Ever since he could remember, this contingency had been taken for granted that he had never thought to question.

It was so much the proper thing for them to do, such a logical union, so desirable from every point of view, that he and Palge had always regarded it as a settled thing—an assured fact awaiting only the ripe moment.

But, not of them, as they were to be married, but that if that time was ever to come it must not be near at hand; they could not much longer be content with "some time."

He frowned with some anxiety. Why couldn't such a simple girl come home at the proper time, when all arrangements had been made for her reception and her family and friends had every reason to expect her?

It was one consolation in the absence of these friends (from town) he was not obliged to invent answers to embarrassing inquiries concerning his dilatory cousin. And this was small compensation for staying in New York by himself until Palge chose to notify him of her whereabouts and intended movements.

He gave one moment of sober thought to the circumstances that she really did not know precisely where she was. If some sudden emergency should arise necessitating a cable he would not know where to reach her.

But he speedily dismissed this phase of the matter; it was no new thing for Palge to start off on a hobby-jant without consulting her proposed itinerary to anybody, and now Mrs. Dorette was with her.

"Just the same," he mused, "if I knew where to catch her, I would send her a cable that would set her gasping for a while."

Unable longer to remain quiet, he bounded from his chair and collided with Alexander, who was seeking him in his career—an accident that did not affect the pace's accustomed composure in the least.

"Gentlemen to see you, sir," Alexander announced.

"Who is it?" Van Vechten snapped irritably. "I don't want to see anybody."

"He paused. Didn't he? Alexander had not presented a card, but whoever the caller might be, he signified a delay. If he held any longer to think he would be a ravine lunatic in another hour! And besides, something had happened the favor of the sole plaintiff's agent in the matter."

Alexander revealed his doubts. He caught a knowing look in the parca's countenance.

"Might your pardon, Mr. Van Vechten. I think you want to see this gentleman."

"Very well," Van Vechten wearily acquiesced. "Show him in."

He did not know the man who immediately followed Alexander into the

CHAPTER V.

Introducing Mr. Flint.

Whatever it might have been that nudged Van Vechten wanted to ponder in conjunction with the morning's happenings, he had no thought for the hourly procession of strange men into Number 1313, nor for the velvet lady as she passed her appearance had startled him, nor yet for the murder-murder, there had been.

His mind was flooded with dissolving images of a fair girl's face. He saw a shrinking, a dread before an unappeasable terror; from which he could not shield her; he saw her sobbing out her heart in bitter distress, and it was not his privilege to comfort.

And then, most vivid of all, were the dark eyes, and the approach of her hands, some dark eyes, against whose silent accusation he could not defend himself.

His frailties' mental effort was chafing and setting his almost to distraction; his head ached and throbbed; his nerves felt as if they stood stripped in a brief storm. And a beautiful face, a handsome one, faded, glimmered before him, pleading, pleading, pleading, coaxing, halting, but constantly and always leaving him more and more astounded and helplessly perplexed.

As he gazed upon the man's face, he saw the same dark eyes, which, earlier, he had planned to spend with the Carterets, Fred Carteret, toward a pleasant summer home on the

"Why Can't You Let a Fellow Alone When He Wants to Think by Himself?"

lounge-room. The intruder was under medium height, slender and unassuming in appearance, but carried himself with a certain quiet assurance that commanded attention. He was as gray as a badger, and his lean, smooth-shaven face resembled a woodpecker.

(To be continued.)

If you are in need of anything, a Times Want Ad will fill your want.

Some Tasks Are Hard and Some Are Easy For Want Ads—While Few Indeed Are Impossible

The easy want ad tasks are usually accomplished through one publication of the ad. The want ad tasks may require repeated publications of the ad—sometimes growing into the dignity of "want ad campaigns."

And, while purely "transient" classified advertising may not complete the task set for it, a "want ad campaign" does not fail, if sensible persistence is used. This means that such difficult want ad tasks as that of finding

The One Best Buyer

for your property, or the man who will be glad to invest in your enterprise, or the best possible tenant for that store or business property, are

Sure to Be Accomplished

if you enter upon suitable want ad campaigns.

WEEKLY NEWS LETTER

Issued by Authority of the Secretary of Agriculture.

The importance to the farmer of having an economical farmhouse has been emphasized by the farm architect of the department of agriculture, who states that the mental and physical fitness of the laborers both within the house and in the fields are vitally affected by the building that affords the family shelter.

The most important building on a farm is the home. The health, comfort, and happiness of the family are dependent upon its construction and placement, and unless these matters are looked after the ganitary dairy barn or the economically constructed buildings for stock are of little value. Happiness and contentment in the family are as essential to efficient service as improved tools and outfitting.

Although the housewife spends, in many cases, a lifetime in her "work shop," the kitchen, and the family rooms, she is not as a rule capable of planning a home in the highest degree of scientific and artistic perfection. Her assistance, however, is essential to the farm architect, as the result of his plans must vitally concern her.

One of the most important details regarding the average American farmhouse is that it must be inexpensive. The average annual net income of a farmer today, after deducting a 5 per cent interest on his investment, is less than \$1000. This does not mean that the houses may not be attractive. They may be intelligent, beautiful, and the help of vines, shrubs, and trees, secure the prettiest spots in the landscape, and more beautiful and inexpensive than the crowded city houses.

The possible economy in household labor and the conservation of the strength of the housewife are two important factors to be considered in the construction of a farmhouse. Pleasant and comfortable farm houses tend to hold families together; but the cheerless, unlovable, and insanitary houses drive boys and girls to the city.

The office of farm management of the department of agriculture has been organized to investigate the problem systematically and to evolve practical improvements for the benefit of the farmer's home.

Certain features are often overlooked in providing economical arrangements for the household when they might be easily provided for. One of the specialists of the office of farm management learned from a woman in Pennsylvania, who had broken down from overwork, that she had been carrying cooking the hens for years. When the husband was asked if there was any reason why a roaster-hunker could not have been provided, she answered that she had found a roaster and placed directly from the wagon, but he answered that there was none, but that no one had every mentioned it. This does not mean that found neglected in other cases where it could have been easily provided, if only someone had thought of it.

After economy in the construction of the building and in the home work has been attained, attention will be given to developing beauty. Simplicity in line and good proportions are meant by the use of this word—beauty, and not so-called applied "ornaments." This simplicity is contrary to keeping with a general plan of economy. With Economy, however, is not a synonym for cheapness. Double-strength glass may give the more economical a tenant house than single strength, notwithstanding its greater first cost. A kitchen sink may be a paying investment, making the kitchen a ray window or a fireplace, which has been the pet notion of the housewife. Screened-in kitchen porches, apple porches, double or triple windows, and kitchen conveniences are the economical features which even the smallest home plans may well consider. Separate dining rooms for families and generally eat in the kitchen are less important as are "parlors." These suggest rooms used for entertaining and for dining, reading, and light, and lighting which involve additional expense. The kitchen is the most important room in the farmhouse.

For the average farmer, occupying but a room especially reserved for reading and family life. A back attic way in small houses is an unnecessary luxury. Large halls which are not used to live in, but merely as show-off places, are a feature which can be dispensed with in the interest of a smaller outlay of money.

Other features that should give way to a comfortable and convenient kitchen are narrow porches, three-worked numerous windows in walls and roof, and ornate trim. They should be an intelligent purpose for every cubic foot of space and for every piece of material about the building, if possible.

It may not be found practicable for the department of agriculture to furnish plans and specifications of farm houses worked out for particular individual conditions. However, it is believed to be desirable to work out plans and specifications for the general needs of farmers and to illustrate and explain the plans so that the farmer may understand the principles involved and apply them to his own present house. The office of farm management is endeavoring to help the farmer and the farmer's wife in this way.

How Lice Choler is Being Combated. The department of agriculture during the past year has been conducting campaigns in Indiana, Missouri, Iowa and Ohio, and the control of cholera, by means of anthrax-cholera serum and fawn quantities. In one county in West Virginia, where there was a loss of 14 per cent in 1911 and 25.6 per cent in 1912 of all hogs raised, there was only a loss of 1 per cent up to November, 1913. This decrease was due to the use of the serum, which, although not used there by the department's instruction, had been used by the farmer. The loss of 20,000 hogs were raised during the past year, and of the 10,000 that died of cholera, only 100 were lost after the active use of serum.

HYOMEI RELIEVES IN FIVE MINUTES

Help Comes Quickly When Hyomei is Used for Croup, Whooping Cough, or Cold in the Throat.

If you suffer from raising of mucus, long, husky voice, drooping in the throat, coughing, or any other symptoms of croup, or have bronchitis or cold in the head, simply use Hyomei. It will soothe the inflamed mucous membrane and loosen and give quick and permanent relief of mucus retained by Skeels. The Hyomei treatment gives a tonic and healthy effect to the air you breathe, destroys the viral germ, stops the infectious secretions, soothes the irritated, mucous membrane, and makes a marked improvement in the general health.

The complete outfit, including inhaler and bottles of liquid, costs \$1.00; extra bottles of liquid, if later needed, 50 cents—Adv.

GIVE ATTORNEY FULL POWERS
To that end, Financial considerations prevent the settlers from putting an encumber on the land.

Persons have been regularly demanded, inadequate water supply straits every man in the face, further settlement, eventually the "law" of the land will be the result of the settlement and that in the event that the territory is down, more money will have to be abandoned.

We ask that you in connection with the work of fighting for the rights of the settlers, you will have the department of one-time influence and steps that may be necessary to see that the state of Idaho, and the settlers to arrive at an equitable settlement at the very earliest possible moment.

aged of the disease. The result is that in springtime the infection is a rather the lowest but increases rapidly from that time until fall. It is not, however, as common as it used to be among the stock raisers. The careful one, the disease sometimes occurs where the conditions are unfavorable to its spread, but the mortality is extended gradually until the disease is completely controlled or eliminated. The fact that hog cholera is carried not only by the hog, but also by ticks, dogs, cats, and even on the feet of men coming from one farm to another, is an important fact. It is the fact that the campaign be thorough and that farmers exert their best efforts to assist in the work.

Hand-Clay Roads Should be Worked in the Spring.
There are at present about 35,000 miles of hand-clay roads in the United States, mainly in the southern states. According to the office of public roads, United States department of agriculture, the time to work the roads is in the spring, when the soil is damp. If the working of the roads is deferred until the summer, the roads will dry, they are not only more difficult to work in but they will not last so long as those worked in the spring.

Previous to 1911 comparatively little, if any, of these roads existed. The popularity of clay roads increased rapidly in the last few years, and it is estimated that there are at present about 35,000 miles of hand-clay roads in the United States. The use of clay roads is made by mixing the sand and clay in such a way that the fine sand binds the other, the spaces between the grains being filled with clay which acts as a binder.

The approximate mixture of sand and clay may be determined by filling a vessel with a sample of the sand to be used and pouring the water in until the water is level with the top of the sand. The water is poured carefully into the sand until it reaches the point of overflowing. The volume of water removed from the vessel represents approximately the proportion of clay needed. The amount of clay needed for any amount of sand can be determined, however, as the work progresses, as some clay will contain more sand than others.

The most recent work has been done in the Twin Falls section. The surface is first leveled-off and crowned with a road machine, the crown being about one-half inch to the foot from the center to the sides. The clay is then dumped on the surface and carefully applied so that it fills the spaces between the sand grains and evenly distributes the material toward the sides. A layer of clean sand is then usually added, which is compacted by means of the clay, either by traffic or by means of a plow and disk or tooth harrow.

Origin of "White Sales"

The place of the White Sale in merchandising events is somewhat peculiar. When it comes to an analysis, it is difficult to discover any logical excuse for such a sale in January or February, so far as any actual demand for this class of merchandise is concerned.

Probably many years ago it was customary for the housewife to do a good deal of her summer sewing during the weeks following Christmas, and it seems likely that the White Sale may have originated through this custom.

However, times and customs have changed—many housewives have no time for sewing, to these people, the Ready-to-wear garments underpriced, make strong appeal; whilst to those who have time and take pride in their own handicraft—the piece goods at sale prices, early in the year, spell considerable economy.

With some stores the White Sale is made one of the most important events of the year; whilst with others it is regarded as being merely in the year's routine, Jenkins & Company prepare months ahead for this big event, and present values that are without their equal.

This year, the assortments are extra large and values above the ordinary. The sale lasts SEVEN DAYS, it then closes. The low prices at which goods are sold, will not permit of "Continuation Sales," or any of the artifices employed in some cities—to keep up interest—and yet make long profits. REMEMBER, Monday, Feb. 9th finishes OUR SALE.

Yours for good values and good service,

JENKINS & COMPANY
