THE MILLION DOLLAR MYSTERY

Announcement is made by the Thoroughbred Film Corporation that the final episode has just been completed and will soon be released and in it the mystery is solved. The fate of Countess Olga, Stanley Hargrave and Eleanor Gray is settled once for all and what is more important, the three where the million dollars were hidden all the time is also revealed.

The name of the fortunate winner of the \$100,000 prize offered for the best solution of the mystery will not be made public until the final episode is released and then only to those who have followed the story and who are in hope with expectation, most naturally taking themselves until the day arrives. It is said that the announcement of the great Thoroughbred serial is filled with surprises, making the final chapter of the Million Dollar Mystery as thrilling and interesting as those which preceded it. Watch out again and for the odds for later announcement.

BULL NEWS

By the Bull Herald... E. A. Hilt was a passenger to Twin Falls Monday morning. Stanley Webber returned Saturday from a visit in Detroit. Mrs. Ed. Zbinden is on the sick list this week.

Rev. Mr. Pemberton is holding a series of meetings here.

Chas. Miller lost a valuable horse last week.

AUTOMOBILE NEWS

How do you know you can't afford an Automobile?

Do you own an automobile? The number of men who could own and drive their own cars is ridiculously small when compared with the number of those who should.

Almost every man who likes exercise and fresh air really wants to own a car. He fails to get his desire because of one or another of these "stock" reasons.

"I can't afford it."

To paraphrase a well-known adage: "There's a war for every man at a price for every man."

The automobile industry is not only "big" in years but it has long since become a national industry.

With few exceptions, our automobile manufacturers want volume. They can (1) develop and establish a permanent working staff; (2) standardize

and make their own parts and materials; (3) produce at a lower cost, only when a certain volume of cars is reached.

You know this is so.

Compare the kind of a car that \$300 to \$200 will now buy with similar price-value of even five years ago.

The real question which the price-value has included all the conveniences that would be "extras" volume has finally brought some car with the reach of your present pocket.

"No. 2. 'It costs too much to keep an Automobile.'"

"Up-to-date" cars are as simple in their operation as the best of any car or any car's.

One man spends twice as much on his clothes as the equally well-to-do competitor, whose cheaper "upkeep" is due to care, a clothes-brush and a "presser-by-hand."

The cost of running a car is less when compared with any other "transportation charges," will be found to be less and in fact, less.

"No. 3. 'I am afraid for a Home'—which is naturally your first duty to your family and yourself."

What kind of a daring response will depend upon to whom the money to buy a home?

A "No. 2" is a faded model—a weakened will—"bubbles filled with steam-heated oil?"

Are these good-sounding "bubbles" which will work out your future?

An hour a day spent "in the open" will increase any man's earning capacity out of all proportion to his cost.

The real question which the price-value has included all the conveniences that would be "extras" volume has finally brought some car with the reach of your present pocket.

CLARENCE POWELL Comedian with Richards and Pringle's Famous Georgia Minstrels at the Loring theatre, Friday and Saturday, February 12 and 13, with matinee on Saturday.

to the fire and 105 per cent at other duties, while he had nothing to do for 66.6 per cent of the time.

An accurate count was kept of the number of stops of coal thrown into the fire. By this means it was determined that in the 1566 tests made, only 1.275 per cent of coal, less than one ton were thrown into the fire each hour.

"In this within the capacity of a single fireman," asked James M. Sheehan, counsel for the railroad.

"Yes," replied Mr. Tolerton, "4,000, 5,000 pounds in weight within the capacity of one man. On all of these tests the fireman used only about one-half of his capacity to handle coal."

"Two new inventions along the lines of the fireman's work, which would save less than 2 per cent of his time in shaling grates and less than 1 per cent more in breaking coal. This indicates a saving of 3 per cent of the time for complaint, and if complaints do exist, they should be handled locally."

"The railroad has many unworked grates in a number of ways."

Mr. Tolerton stated that the tests made were 10 per cent heavier than the average rating in the boiler months and were 1 per cent longer than the average in the 30 days of heavy traffic.

"From these observations do you consider two firemen necessary?" asked James M. Sheehan, attorney for the roads.

"Absolutely not," replied Mr. Tolerton.

Improvements in locomotive design which have cut one-third from the physical labor formerly required of a fireman were described by Mr. Tolerton.

"These improvements," he said, "have effected a saving of 30 per cent of the time of the fireman in shaling the grate and the brick arch."

"These improvements," he said, "have effected a saving of 30 per cent of the time of the fireman in shaling the grate and the brick arch."

HEATING COALS OF FIRE

On the heads of the consumers is what this firm is doing with the prices now made, either by direct or delivered promptly anywhere in the city. We are heating coals of fire upon the heads of consumers, because we are delivering better coal for the price of cheaper grades sold elsewhere. It is a good hot fire which our coal is heating.

W. R. Priebe, Oregon Sheriff, came from an inspection tour which took him as far west as Miles on the main line.

Harley J. Hooker was in the city for several days of the week with a party of land crokers from the east. It is understood that several of the party purchased land on the high land pumping section.

Word was received from D. E. Sullivan, agent of the Oregon Short Line, who is in Birmingham, Alabama, reporting as a witness in the United States court, that he may be detained in the southern city for two or three weeks more.

J. J. Howe returned to his farm west of Buhl Wednesday, after spending a day in town on business. Mr. Howe has spent the last three years in Utah, where he was engaged on construction work on an irrigation project.

TEACHERS' EXAMINATION. Will be held at Twin Falls on February 25, 26, 27th, 1915. Questions will be held for state, city, first, second and third grade certificates. Feb. 12-13

At the home of Chas. McMaster last Thursday evening, the ladies of the Winodous club gave a dinner party at which their husbands were the honored guests. The table was decorated with attractive pieces of pink carnations. Pink hearts were used as place cards. Ballerina dresses and other games were played and the evening passed merrily.

On her fifteenth birthday, Tuesday, Miss Bernice Haskock entertained on Camp Fire girls with a dinner party.

There is no reason to feel lonely or despondent, even though the weather is bad, when there are so many delicious hot drinks at

SOCIETY NOTES

The table was centered with a pink birthday cake, surrounded by pink roses. Following the dinner, each guest was requested to tell an Indian story, prizes being given to Miss Alberta Bonnet and Irene Spilberg for the best story.

The "Flor" club was entertained by Mr. and Mrs. Walter Musgrave last Friday evening. Games were played and the evening closed with a lunch.

The luncheon club was entertained by Mrs. Maxwell Friday afternoon. The prizes were embroidered towels and went to Mrs. Felling and Mrs. Booth.

Last Monday Miss Eleanor Babcock delighted sixteen little friends with a party. The occasion being her eighth birthday. Ice cream and cake were served.

Miss Lillian Smithson entertained the B. H. C. club last Friday evening. The evening was spent in singing. Refreshments were served by the hostess.

Mr. and Mrs. Ernest Gates entertained informally at "water" Thursday evening. Messrs and Mesdames W. H. Karis, Parsons, Edwards, Suttell and Wise were the guests.

The ladies belonging to the Cox' 500 club were entertained by Mrs. Johnson Wednesday afternoon. Mrs. Chapman was the lucky holder of high score and received the dainty prizes. The club will meet two weeks at the Putnam home, Mrs. Sherman acting as hostess.

The Acrema club met at the home of Mrs. Kay Friday afternoon. Mrs. Cogwell read a paper on "The English Character." The subject was "An Education," was read by Mrs. Kay and freely discussed by the club members. Luncheon was served.

Misses Georgia and Charlotte Stewart and Nellie Howe entertained about twenty members of the Queen Esther club Tuesday afternoon at the Stewart home. After the program a delicious supper was served. Miss Charlotte Howe was a guest at the meeting.

Mrs. A. P. Saylor was, agreeably surprised, when she was surprised by Mesdames Tibbel, Barton, Latol, G. F. Baker, Morse, W. T. Wood, Greenwood and others. The ladies brought their fancy work and also a delicious lunch which was served at the close of the afternoon.

Mr. and Mrs. W. H. Karis entertained Messrs and Mesdames H. B. Johnson, J. A. Gates, J. C. Spangler, J. T. Chapman and F. H. Cox at cards Wednesday evening. The prize which was a decorated plate, went to Mr. and Mrs. Cox, while Mr. Chapman received the consolation. Lunch was served at the card table.

A delightful luncheon was given by Mrs. Lewis Pettit Wednesday afternoon. One of the features of the afternoon was "Ballroom Gossiping" contest at which Miss Willie was the victor, a potted plant. The luncheon was served at small tables, decorated with pink carnations. The hostess was assisted in serving by Mesdames P. J. Costello, H. O. Miller and M. Pink. About thirty-five guests were present.

At the home of Chas. McMaster last Thursday evening, the ladies of the Winodous club gave a dinner party at which their husbands were the honored guests. The table was decorated with attractive pieces of pink carnations. Pink hearts were used as place cards. Ballerina dresses and other games were played and the evening passed merrily.

TWENTIETH CENTURY CLUB NOTES

Members Show Skill in Construction Art and in Poetry.

One of the most enjoyable afternoons of the club year was the Valentine contest under the management of Mrs. Chas. Holliday, each member being requested to prepare an original valentine. The success of the day was enhanced by the artistic and appropriate decorations of the hall, the work of Mrs. McClain and Mrs. Flower, chains of red hearts were gracefully furnished from the electrolators, producing a very pretty effect. Mrs. McClain was made the Twentieth Century club become a sustaining group by paying five dollars monthly upward to the Women's Peace Party, recently founded in Washington, D. C., looking toward the finish of this war, and the prevention of wars in the future. Mrs. McClain is the chairman. This motion was heartily carried.

The club on the day then took charge of the program which she opened by a short talk on the origin of Valentine day. Prof. Peterson, followed by Mrs. Holliday followed with two vocal solos appropriate to the occasion, which were much appreciated. Then came the reading of the Valentines by Mrs. Boyd Walter, which led in adapting herself to the mood of the writers added greatly to the pleasure of the afternoon. The contest was in the hands of Mesdames Dyer, Hamble and Fred Fuller as judges and proved far from an easy task. Numbers had been offered in three classes, comic, sentimental and artistic decorations, but the judges decided in favor of the reading of the Valentines by Mrs. Boyd Walter, which led in adapting herself to the mood of the writers added greatly to the pleasure of the afternoon. The contest was in the hands of Mesdames Dyer, Hamble and Fred Fuller as judges and proved far from an easy task. ORCHARD CLEANINGS

GOOD TILLING BY EXPLOSION

Experiments Have Proved That Young Trees Grow More Rapidly and Vigorously by This Method.

It begins to look as if cultivation of the orchard by explosion is to be one of the recognized methods of farming in the future, just as locomotion by airplane is already one of the principal means of getting carried about.

In other words, the "explosive plow" will become as familiar as the explosive engine.

An English authority on high explosives, W. Macnab, points out that this new method of cultivation is especially beneficial to orchards. Instead of digging a hole with the spade in which to plant a young tree, an excavation is made in an instant by exploding a cartridge. The size of the cartridge and the depth at which it is placed depend upon the tree and the circumstances of the case. But whether a large or a small hole is blown, the beneficial effects of the explosion are in the complete shaking up and flinging of the soil.

This extends far beyond the edges of the excavation, and below its bottom, so that fresh supplies of chemical food are brought within reach of the roots of the tree.

Experiments have proved that young trees planted in ground prepared by explosion grew much more rapidly and vigorously than others planted in the usual way, and begin to bear fruit sooner.

Old exhausted orchards may be reinvigorated by the use of explosives. In some cases small cartridges are exploded under the roots of the trees, and in other cases larger cartridges, buried in rows of more feet deep, are placed midway between trees standing 15 feet apart. The result is to loosen the soil without injuring the trees.

HARM BY APPLE TREE BORER

Thick Whitewashes on Trunk and Limbs Act as Repellent Against Female.

The fathead borer is a very destructive pest. It is a conservative climatic that 50 per cent of healthy and properly planted trees which die soon after setting out, are killed by the larvae of three small, active, copper-colored beetles. Young trees of especially any variety are attacked, especially if set out near woodlands containing such trees which die soon after setting out, are killed by the larvae bred out in large numbers.

After these larvae have gained entrance to the tree, no external sprays or applications are satisfactory, and the only course of treatment is personal attention to each infested tree. Preventive methods are more successful. If a thick coating of some harmless substance is applied to the

Injury Caused by Flat-headed Apple Tree Borer.

trunks and larger limbs of young trees, it will act as a repellent against the female depositing the eggs. Thick whitewash, painted or sprayed on the trees acts as good repellent. If the appearance of whitewashed trees is objectionable, the addition of a little lampblack will tone down the whitish white to a gray, still yielding the caustic lime unaltered. Thick washes are also recommended for this treatment.

Gooseberry Pruning.

Every spring strong roots are thrown up from the gooseberry bush and should be cut off the following season. The old wood must be removed to make room for the new, or else you will soon have a mass of shoots so crowded that they can bear fruit in any amount that the old wood should be cut every year. Rather select two or three good shoots and let them branch and be the fruit bearers for some years. Meanwhile remove the most of the now growth.

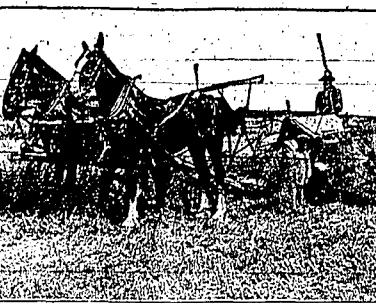

Cost of Production.

Now much has it cost you to produce a box of apples? Unless you know the cost of producing a box of fruit you should not deal with the market price.

Common Peach Diseases.

Leaf curl is a more or less common disease on all peach-growing regions of the world, and in some places has proved the most destructive of all diseases.

IDLERS DESTROY ALL CHANCES OF PROFIT

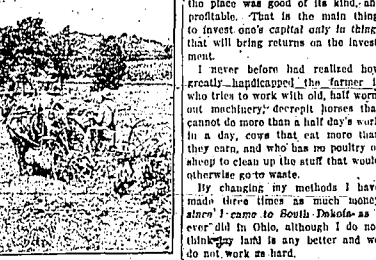

Get Rid of the Old Machinery and Have the Best Up-to-Date Labor-Saving Kind—This is an Era of Efficiency.

(By JOHN D. PHENIX.) A good many years ago I suddenly woke up to the fact that the idlers on the farm are the things that keep a man from making money. When I came West fifteen years ago I visited a big manufacturing plant at Chicago and I was struck by the system which kept everybody and everything busy.

In going through the factory I could not see an idle man nor an idle machine. Everything and everybody was at the jump every minute. No lost motion, no loafing on the job. And as I pondered over the matter on my way to my new farm I began to realize how much I had lost in the past through maintaining idle and unproductive things.

As soon as I got settled I sold off three old horses I had brought with me, and bought two good ones; traded four cows that had never been up to the mark for two that gave more milk than the four ever did. And as I walked some of my capital in a flock of 20 sheep, about 100 hens and five of the best brood sows I could buy in the country.

Then I traded an old reaper that I

Using the Tessler—A Very Useful Implement in Caring a Crop of Alfalfa or Clover.

had hauled from central Ohio for five stands of bees and in good profit. I made up my mind that I would have the best tools and the best live

GOOD PROTECTION FOR TREES

Pennsylvania Expert Recommends That All Litter Be Removed and Earth Mound Be Erected.

The damage to trees, particularly in young orchards, from gnawing by rabbits and mice during the winter time is very great. Last winter in particular there was an unusual abundance of field mice. When the snow showed, the mice were everywhere in all directions. Many young trees planted in 'sod' or where manure or mulch came closely around their bases were completely girdled by these animals.

As a preliminary measure, Professor Juddock of Ohio college of agriculture recommends that litter of all kinds be removed from around the trunks of young trees and that a six-inch mound of earth thrown about the trunk of each tree is also a good plan. This protection of earth also protects to a certain extent against winter injury.

One does not want to go to the other extreme, however, and remove all litter from off the young trees about the ground against. One of the ways recommended for preventing the rabbits from gnawing the trees is to protect them with some form of tree protector.—This may either be a cylinder of flannel-washed worn, wire or wood veneer or cloth.

Good Tying of Broad Sbs.

In selecting a broad sow, the form is not to be considered. The body should be fairly built, vigorous, long with heavy quarters, flat back, short neck, ears and hinds. The neck should not be too short. She should be a vigorous feeder, with great capacity, because an inefficient feeder will starve her pigs. A sow whose litter range less than eight to twelve pigs, each is a failure.

Less Seed Required.

Less seed to the acre is required where sows are sired with the drill than when seeded broadcast.

POULTRY FACTS

SUITABLE HOUSE FOR DUCKS

Dry Floor, Well Bedded With Straw or Shavings, is Essential—Feed and Water Outdoors.

(By D. O. BARTO, University of Illinois.) Much less expensive buildings will answer for ducks than are required for hens. The essential are a dry floor which should be kept well bedded with straw or shavings, added a fresh layer on top as the old litter becomes soiled or damp. It is not necessary to clean the pens until spring, as the droppings are all the manure. The roof must be tight, and the sides made of any sheeting material. A window 2x3 feet, made to slide, and a drop door 2x3 feet for the ducks, with another door for the attendant to enter, are all the openings necessary. The house should be 12x12 feet for each flock of 30 ducks. A large yard is unnecessary during the laying season, as the birds will not exercise much. The food and water should be given outside the house, and the yards should be kept free from

A Fine Flock of Ducklings.

and by the use of linders or litter. Feed in racks, so that the ducks can not soil and waste the food.

About the middle of November, the birds are put on their laying racks which must not be changed till the second week. Feed night and morning the following mixture:—Five parts of corn chop, five parts of bran, two parts of middlings, two parts of mixed straw, four parts of oat cross mix, five per cent of coarse sand. Mix and molten to the mass is crumbly. An addition of three or four parts of boiled vegetable is desirable if it can be provided. This "preen" may be dry clover, oats, alfalfa, or whatever can be most easily provided. In the winter finely cut clover or alfalfa that has been sealed over night is a good substitute.

One-hens duck grower states: "In exactly three weeks after beginning this feeding, you will commence to gather eggs." Pekin ducks will average 150 to 140 eggs per duck in the season.

HENS' DUST BATH IN WINTER

Fine Road-Dust Is Essential for Keeping Poultry Free From Vermin During Cold Weather.

A box of fine road dust should be kept within easy reach of the hens every day in the year when there is no dust in the yards for the hens to wallow in. Of course, hens on a range, in summer and fall will usually find an unlimited supply of dust ready at hand, or at most all we need to do is to spread a place if it is not in the season.

The dust bath is just as essential in winter in keeping the fowls free from lice as it is in hot weather. Lice thrive and multiply in winter as well as in summer, and so readily, of course, that a little dust in the average poultry house is making life a torture for the hens if nothing is done to keep the insects in check.

DOULTRY NOTES

As a rule, Monday is the best killing day.

A great amount of water is used to form an egg.

In packing dressed poultry for shipment, never use straw, cloth or paper.

See that the carcasses are in such condition that they attract the eye of the customer.

Door carcasses should never be sent to city market; rather should they be packed with good ones.

Remember in cold weather to increase the most ration, as the hens need it to keep up the heat for the body.

In March the broiler market calls for one and a quarter pound birds; April, one and a half pound; May, one and a quarter to two pounds.

The French feed considerable buckwheat to their turkeys, believing that this grain imparts to the flesh a delicate, nutty flavor much liked by their customers.

A curiosity perhaps, but there will be more of these round barns in Idaho within the next few years.

and more too, of good barns of all shapes and sizes.

Many of us are commencing to realize that putting money into high grade improvements is simply a sound method of saving.

It increases a man's credit and the value of his property much more than the actual money expended.

Gen State Lumber Co.

Why Pay Rent? 10-20 acre tracts overlooking Ft. 3775.00 to \$30,000.00 per acre. Farms \$50 per acre cash and \$1500 per acre per year. Fine location, fine land.

When you buy the new Ford Sedan you buy the Service and Essential Comforts obtained in the high-priced limousines—but you don't pay the extravagant first cost and the excessive maintenance expense. The new Ford Sedan is like the other 675,000 Fords already in use—low in cost, high in quality and the most economical car to run that was ever built—on the average of less than two cents per mile.

Ford Sedan \$975; Coupelet \$750; Town Car \$690; Touring Car \$490; Runabout \$440. All fully equipped, f. o. b. Detroit.

On sale at the

WESTERN AUTO CO.

Buyers will share in profits if we sell at retail 300,000 new Ford cars between August 1914 and August 1915.

AGED BROOD SOWS ARE BEST

Regular Breeders With Large Litters and Who Take Good Care of Pigs Are Proper Ones to Keep.

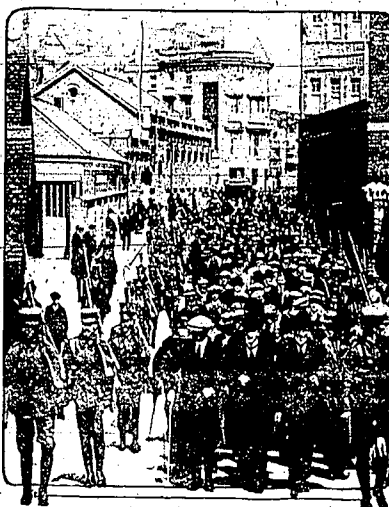

Sows that are regular breeders, farrow large litters and take good care of the little pigs, should be kept until they fail to be good producers. The principal test of whether a sow is a good milker or not is the thrift of her pigs, and her condition while suckling them. If they thrive, and she eats liberally and keeps in good health and digestion, and at the same time becomes a little bit white during her pigs, it is pretty good evidence that she is a good mother and should be kept as long as her usefulness lasts.

A regular breeder and a good mother is worth fully \$50, and is a valuable animal.

The young brood sow usually improves as she matures, so that better results may be expected the second year.

Very little progress can be made in building up a good herd of hogs if the policy is to dispose of the young sows after they have farrowed one or two litters. Young sows are,

GERMAN PRISONERS IN ENGLAND

Two hundred German reservists being marched through the streets of Folkestone by English troops. They were captured as they were about to leave for the continent.

DAIRY

BEST TIME FOR FRESHENING

Several Good Reasons for Having Cows Drop Calves During Months of September and October.

It is generally held by breeders that it is best to have cows freshen in the months of September and October. There are several reasons for having cows calve at this time: First, the cows will produce more milk when they freshen in the fall instead of in the spring; second, the prices for dairy products are higher during the winter months than in summer; third, calves born in the fall may be turned out in the

We Should Keep Cows Throughout Our Needs.

pasture to better advantage than those born in the spring; they are, therefore, more capable of protecting themselves from flies. When cows freshen at this season of the year, and it is desired to have them freshen the following year at the same time, it is necessary to carry them for three months before breeding. This is the usual practice among the best dairymen.

We would say that it would be better to begin breeding the animals the first of January if it is desired to have them freshen in the fall, for it is not possible that it will require more than one breeding.—Hoard's Dairyman.

CLEAN WATER IS NECESSARY

Artificial Pond Erected by Farmer Proves Quite Adequate for All Needs of Farm.

Good clean water is an essential necessity for the comfort and well-being of the dairy herd. It is well water, if good, is possible to obtain, but when there is not a natural supply of good clean water, some artificial pond, which supplies our needs in this direction, which is ordinarily from twelve to fourteen feet deep, and clean.

This pond was made by building a dam across a hollow in the ground, 45 feet wide at the bottom and was, except at the top, a foot or so above the level of the ground. The water in the pond was clear and sweet, and the wash from breaking the dam, this outlet is not over the dam, but on this side.

To accomplish this task three concrete and four or five iron work bars were for three weeks after the dam had settled it was built up to the necessary height twice at different intervals.

If we run with a skillful hand and have a good milk producer, we have a place to skate, and a great excellent place to get an abundance of milk for the household. Not only this, but the neighborhood in this direction, there has the first-class of water, and the water they wish to use. When this well is dry there is plenty of water to the demand. It took a lot of hard labor and backache, but it has given me 12 years or more of service.

JUDGMENT IN BUYING COWS

If Animal Has Characteristic Markings for Her Breed She is Always Easily Salable.

When buying cows, don't buy anything that has a well marked case you should want to do so. The best demand is for grade cows of the leading breeds, and if a cow of the characteristic color markings for her breed, she is easily salable. Of course, to sell a cow on the strength of her color alone is hardly fair to the buyer. Get them with color combined with production. The chances are, however, that you will have a few good-looking cows that are not milk producers, and will not be bought in part with her, no matter how short of money you may be.

It Animal Has Characteristic Markings for Her Breed She is Always Easily Salable.

When buying cows, don't buy anything that has a well marked case you should want to do so. The best demand is for grade cows of the leading breeds, and if a cow of the characteristic color markings for her breed, she is easily salable. Of course, to sell a cow on the strength of her color alone is hardly fair to the buyer. Get them with color combined with production. The chances are, however, that you will have a few good-looking cows that are not milk producers, and will not be bought in part with her, no matter how short of money you may be.

Water Supply for Cows

In winter the water supply for dairy cows should have close attention. If watered from an outdoor tank, the water should have its chill removed before cows are allowed to drink it. If cows are watered in the barn, the sure the water is delivered from the tank from which they are drinking, and will not be pumped in part with ice, no matter how short of money you may be.

ISLAND THAT PROTECTS KAISER'S FLEET

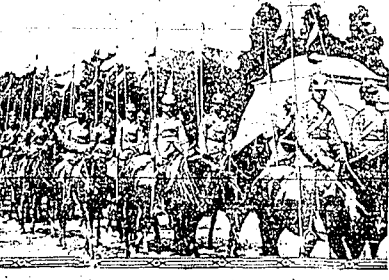

The island of Heligoland has been powerfully fortified by Germany since its acquisition from England, and now is a practically impregnable guardian of Germany's part of the North sea, and the Kiel canal, where the Kaiser's fleet is believed to be sheltered.

Champion Red Duroc Sow

as a rule, not as dependable producers as matured sows. They will, however, develop as they mature, and can often be retained a number of years to advantage.

Young sows do not farrow as strong litters and they are usually smaller than those from the mature sows.

Young sows that are kept should be fed more liberally than older ones. The latter, if they have a warm, dry pen to sleep in, with plenty of dry leaves or straw for bedding, will require very little food.

We feed our brood sows principally on bran soaked in water and whole oats. We always make a few stock feeds and cabbage to feed when grass cannot be had. We use abundant supply of wood shavings, charcoal made from burnt corncobs in the feeding room. One of our most successful breeders keeps his brood sows in fence woods and grass pasture the year round.

TEACHING THE COLT TO LEAD

Take the Little Fellows When They are Young and Easily Taught—Don't Get in a Hurry.

—BY M. COVIELL.

You often see a man kick and cuff the colt around, every time it happens to get in his way.

After a while you will notice this same fellow out with the family helping him to hem up a two-year-old colt, while he can just a halter on him.

For the first two or three times they get the halter on, they have a regular circus in teaching the animal to lead and to harness. It is mighty hard and dangerous work, too, this breaking in this strong two-year-old colt.

Why not take the little fellows in hand when they are small, easily handled and quick to learn? Slip the halter on the colt occasionally and by slow degrees get it accustomed to leading up, when the lead strap is hitched on and you move.

But don't get in a hurry. The colt has been used to going ahead of you, so don't expect it to follow too soon.

A lump of sugar, or a few oats held in the hand just in front of the little fellow are much better teachers in teaching it to lead than dragging it by the lead strap and having someone behind it with a club or a flogging pole to "shoo" it along.

Value of Roughage

The nutritive value of winter roughage for stock depends in a large measure upon its palatability. This is a point that should be given serious consideration in making up the grain ration for the stock.

Good Investment.

The purchased mare is a good investment to the small farmer, and it is well to allow her to share the work of the place who will do nearly as much work as a gelding, and raise a good colt beside.
